FRIENDS OF RICHARD COBDEN
These Volumes
ARE
INSCRIBED BY HIS WIDOW.

CONTENTS OF VOL. I.

ENGLAND, IRELAND, AND AMERICA . . .	PAGE 1
Introductory Note,	3
ENGLAND, 5—Russian Chimera, 7—David Urquhart, 9—Apprehensions for our trade, 13—England, Russia, Turkey, 17—Desolation of Turkey, 21—What Turkey might be, 23—England's true Colonial Policy, 25—Greek Church, 33—Odessa, 35—What England is asked to do for Turkey, 39—Non-intervention principle, 41.	
IRELAND, 48—Foreigner's impression of Ireland, 49—English ignorance of Ireland, 51—Restrictions upon Irish trade, 53—Political tendency of the Roman Catholic religion, 55—Prosperity of Protestant States, 57—Irish Customs unchanged, 61—Effects of the Church of England in Ireland, 63—England depressed by Irish poverty, 69—Henry David Inglis' testimony, 73—Charity should begin at home, 75—Lord Brougham's appeal for intervention, 77—Proposed remedy for absenteeism, 79—Poor Law for Ireland, 81—Emigration, 83—Valencia as a trans-atlantic port, 85—Railway extension in Ireland, 89—Evils of a dominant Church, 91.	
AMERICA, 97—English prejudice against America, 99—Commercial rivalry of the United States, 101—American and British exports, 103—American and English Navies, 105—Military Expense of England and America, 109—Military Defence of England, 111—Cotton Trade of the United States, 113—American Railroads, 115—Obstructions to English railway enterprise, 119—Education in America, 121—Press of England and America, 123—Old and new race of shopkeepers, 125—The English, an aristocratic people, 131—Fruits of an aggressive policy, 133—Great armaments unnecessary, 135—Pressure of the debt, 139—How our revenue is raised, 143—Effects of Corn Law repeal, 149.	

RUSSIA	PAGE 155
Advertisement, 157—Introductory Note, 159—	
RUSSIA, TURKEY, AND ENGLAND, 161—	Popular panics, 163—
Character of the Turkish Government, 165—	Description of
Russia, 175—Russia and Constantinople, 183—	Apprehensions
for our trade, 185—True sources of national power, 191—	The
manufacturing districts, 195—Russian and British aggression,	199—
State of the Russian provinces, 205—The Caucasian	tribes, 209—
Wallachia and Moldavia, 211—Russia's Persian	conquests, 213.
POLAND, RUSSIA, AND ENGLAND, 215—	Polish nobles and people,
217—Former condition of Poland, 219—Poland since the par-	tition, 227—
Polish revolt in 1830, 233—Incitements to war	with Russia, 235—
Absurd ideas of Russian power, 237—	Obstacles to Russia's domination, 251.
THE BALANCE OF POWER—	English passion for interference, 253
—Balance of Power, 257.	
PROTECTION OF COMMERCE—	King's Speech in 1836, 285—
Value to England of her manufactures, 287—	Armed protection of
commerce, 289—Mutual dependence of England and America,	295—
True policy of the nation, 299—Effects of the great war,	301—
Protection in France, 303—American manufacturing	competition, 305—
Effects of armaments on commerce, 309—	Cost of the armed protection of commerce, 311—
Consequences of British wars, 321—	Probable result of another war, 327—
Non-intervention in foreign wars, 329—	The Author's parting
word, 337—Supplementary note, 339—	Appendix, 340.
1793 AND 1853	335
Introductory Note, 357—Preface, 359.	
LETTER I., 361—	Belief concerning the last French war, 363—
Expulsion of the French Ambassador, 365—	Peace party in
1793, 367—	The Duke's theory of military duty, 369.
LETTER II., 373—	Historical sources of information, <i>ibid.</i> —
Antecedent state of opinion, 375—	Speeches of Burke and Fox, 377—
The Constituent Assembly, 379—	Alarm of the European
Sovereigns, 381—	Grounds of foreign interference, 383—

France not responsible for the war, 385—Austrian and Prussian manifesto, 387—Results of the manifesto, 389—The two parties in England, 391—Duke of Brunswick's manifesto, 393—Correspondence with the French Ambassador, 395—Action of the French Ambassador, 397—Remonstrances of the French Minister, 399—M. Chauvelin's interview with Lord Grenville, 403—French and English letters compared, 405—Free navigation of the Scheldt, 407—England popular in France, 409—Real causes of the war, 411—The King's Speech, 413—Fears of the Boroughmongers, 415—Edmund Burke's monomania, 417—Windham and Wilberforce, 419—Lord Fitzwilliam's admissions, 421—Alison on the origin of the war, 423—Warlike preparations in England, 425—Moral of the argument, 427.

LETTER III., 428—Value of correct views of the war, 429—French apology for 1794, 433—What the Revolution did for France, 435—Argument applied to Englishmen, 437—The present danger, 439—Letters of "an Englishman," 441—Invasion cry of 1847, 445—The Duke's fears in 1851, 447—Invasion panic literature, 449—Increase of the Army, 451—Influence of example, 453—Lord Aberdeen's views, 455—Pacific tendencies of the age, 457—Securities for peace, 459—French resources in the two epochs, 461—Spoliation of invaded countries, 463—Benefits of intercommunication, 465—Sir William Molesworth's protest, 467—Importation of coal into France, 469—Cotton trade of France, 471—French silk trade, 473—French imports, 475—Manufacturing operatives of Paris, 477—Mercantile tonnage of France, 479—French distrust of the alarmists, 481—Force of public opinion in France, 483—Composition of the French army, 487—Work of the Peace party, 489—Energy of the English character, 491—War glorified in Christian temples, 493—An example of true heroism, 495.

NOTE.

The new foot-notes are printed within brackets.

INTRODUCTION TO THE AMERICAN EDITION.

ON the evening of the 18th of June, 1845, Covent Garden Theatre, in London, was crowded with men and women assembled at the call of the Anti-Corn-Law League. They had come together in order to hear addresses from some of the eminent leaders of that association. I was present, and had never seen a large assembly more respectable in appearance, or more attentive to every word that fell from the lips of the speakers,—enthusiastic applause interrupting, from time to time, the profound silence, and again quickly hushed into breathless attention. This vast audience was addressed by John Bright, Richard Cobden, and W. J. Fox. Bright had then begun to distinguish himself by that manly and massive eloquence which has since given him his fame. The oratory of Fox, who spoke last, was of a more florid cast, and enlivened with sallies of humour, by which the audience was greatly entertained. But most of all was I impressed by the speech of Mr. Cobden—by his direct dealing with the subject of discussion, the manifest sincerity of his convictions, his air of invincible determination, the perspicuity of his statements, his skill in arranging and presenting his topics, and the closeness of his logic. So persuasive was his address, that I saw at once why so high a place had been assigned him in the agitation for the

repeal of the Corn Laws. Here was one who knew how to appeal to the general mind of his countrymen, and having won their assent to the merits of a great public cause, was able to infuse into them his own resolute spirit in carrying forward that cause to its final triumph.

When I left the building I remember saying to a friend that I did not see how the Corn Laws could survive the attacks to which they were exposed, and that I perceived, or thought I perceived, in the meeting I had just attended, the proofs of a public opinion too powerful for the land-owners much longer to resist. The hour of triumph for the League was, in fact, even nearer than I anticipated. In the next year's session of Parliament, the British Ministry, with Sir Robert Peel at its head, came forward with a bill for removing the old restrictions on the trade in grain, and wresting from the landed proprietors the monopoly on which they had relied as one of the main sources of their prosperity. The bill became a law; the long and vehement struggle was closed by the defeat of the aristocracy; Peel, now the object of their displeasure, though thanked by the nation, withdrew from the Ministry; but he, like Mr. Cobden, found his reward in the appreciation of his countrymen.

More to be valued than mere success in procuring this change to be made by Parliament was the triumph of the principles on which the change was founded. Mr. Cobden and his associates in the agitation for free trade in corn had always insisted that the agriculture of the country would suffer no

prejudice from the repeal of the Corn Laws, and the result showed the truth of this assertion. The people were sensibly relieved, and the land-owners suffered no loss; the manufacturing population had cheap bread, and the agricultural population were not deprived of employment. The cultivator found himself obliged to resort to more skilful methods of tillage, and was rewarded with richer harvests. I believe I am not mistaken when I say that among the land-owners of Great Britain there is now no fear or jealousy of foreign rivalry.

This success of an association organized under popular leaders against a powerful aristocracy has made Mr. Cobden's an historical name. In discussing the justice and expediency of what were called the Corn Laws of England, he was led to investigate the principles which all measures regulating the intercourse between one nation and another should recognize. All his writings refer to these principles, and have a value which lifts them out of the sphere of local and temporary interests, and which no lapse of years can impair. They are practical illustrations of the philosophy of commercial legislation: documents from which the history of the world's commerce is to be written. At present, while the policy of most governments in regard to their intercourse with each other is far from being fully and finally settled, they form a storehouse of arguments and illustrations in the controversies continually arising.

There are two classes of politicians—statesmen the world generally agrees in calling them, though that title, in its proper and nobler sense, belongs to but

one of them. One class keeps studiously in sight the rules of justice and humanity, as the principles of legislation and government upon which it conscientiously supposes the welfare of the community to depend. The other class, which is found in all countries and in all political parties, aims at securing and promoting certain minor interests upon one specious pretext or another, which is taken up or laid aside as it may serve or fail to serve the occasion. I need not say that Mr. Cobden belonged to the former of these classes, and was a statesman in the highest sense of the term. In all the public measures which he discussed, he regarded mainly their consequences to the people at large, or, in other words, the good of the human race. In the most civilized part of the globe, he saw how often the subjects of the different governments were slaughtered and stripped of their substance to carry on wars in which they had no manner of interest, and the sole motive of which was the aggrandizement or caprice of those who ruled them. Moreover, to refer a dispute between nations to the arbitrament of war is in no way to obtain a just decision, and Mr. Cobden saw no reason why, for this brutal method, the custom of nations should not substitute that which, in every society, even of the loosest organization, determines controversies between individuals, namely, the obvious expedient of referring them to third persons presumed to be impartial as between the disputants. He wrote, therefore, in favour of referring to arbitrators all differences between nations which could not be settled by negotiation. It is

certain that this method is coming more and more into favour, as the intercourse between nations becomes more intimate, although various causes still prevent it from being generally adopted. At some time, when mankind shall be more generally enlightened, and those who administer the governments of the world shall be forced to pay more regard to the interests of the people whose affairs they have in charge, the folly of going to war may be deemed as great as that of settling a question of law by a boxing match. The hope that the world may grow wiser, and therefore more peaceful, as it grows older, is not so absurd that it has not been cherished by the friends of the human race from an early period; and whether it be a philanthropic dream, or, as I believe, the expectation of a wise foresight, it has in all ages inspired the prayers of good men, who look for the time when the sword shall be beaten into the pruning hook, and nations shall learn war no more.

Mr. Cobden never hesitated to raise his voice against any war undertaken by the British Government, for causes which, in his view, did not justify a resort to arms. In 1857, he led the majority which, in the House of Commons, censured Lord Palmerston for the war with China. It is most natural in a time of war for the large majority of every nation to take part with its own government, and to maintain the justice of its quarrel. It was a great triumph for the cause of impartial justice in Great Britain, when the popular branch of its legislature was persuaded so far to forego this natural prejudice as to declare

that a war in which the British ministry had involved the nation was neither just nor necessary.

There could scarcely be a higher testimony to the statesmanship of Mr. Cobden, the justness and safety of his views of commercial questions, and his capacity for fulfilling an important public trust, than was given by the British Government, when, a few years since, on his suggestion that an opportunity had presented itself for placing the trade between Great Britain and France on a better and more liberal footing, it entrusted him with full powers for that purpose. The expected arrangements were made through his agency; a treaty was negotiated, and the result was an enormous increase in the trade of the two countries, and a corresponding development of friendly intercourse between the one people and the other.

In the later years of his life, Mr. Cobden took a deep interest in the controversy which the leading men of the Southern States of this Republic forced upon the people of the North, when, renouncing their allegiance to the Federal Government, and breaking away from the Union, they invited an appeal to the sword. He was convinced of the absolute necessity of the effort we were making to preserve the Union unimpaired, as indispensable to the future peace and prosperity of the country. He rejoiced with good men all over the world when our government repealed the law of bondage in the Rebel States. He was one of those enlightened Englishmen who zealously took our part against the governing class of their own country, maintained the justice of our

cause, and predicted for it a certain and glorious triumph. He lived, if not to see his prediction fulfilled, yet to behold the sure signs of its near accomplishment.

I now leave the American reader to the perusal of the writings included in this collection. He will find in them the utterances of a true friend of the human race, whose sole aim was so to modify existing institutions, by proper and equitable methods, that all who live under the same government may be equal partakers in its benefits, and to bring all the blessings of life within the reach of the largest number. This great end he kept steadily in view, never intimidated from pursuing it by the danger of unpopularity, nor seduced to abandon it by the love of distinction and the praises of the great. His indignation at the oppression of the weak and helpless was never disguised, and his whole political life was made up of manly labours in the cause of justice. From the writings of this illustrious teacher the wisest statesman may be instructed in the practical application of the maxims of a comprehensive, humane, and generous political philosophy.

W. C. BRYANT.

NEW YORK, November, 1866.

* * * It has been thought that Mr. Bryant's Introduction would be as interesting to the English as to the American reader, and it is therefore added to the present edition.

ENGLAND, IRELAND, & AMERICA.

1835.

“The great rule of conduct for us in regard to foreign nations is, in extending our commercial relations, to have with them as little *political* connection as possible.”—*Washington's farewell address to the American people.*

NOTE.

As the first of Mr. Cobden's literary productions—written and published in the spring of 1835, when he was unknown to fame, and a simple “Manchester manufacturer”—the following pamphlet is invested with an interest peculiarly its own. Like the succeeding work on “Russia,” it has for many years been out of print; and although, during the intervening period, it has been constantly alluded to and frequently criticised, probably few of those who wrote and still fewer of those who read the strictures of the press upon it, had an opportunity of reading either of the editions which were published thirty years ago. It may be interesting to state that both pamphlets were in the first instance published by Mr. Ridgway of Piccadilly, and subsequently reproduced in a cheap form by the late Mr. William Tait of Edinburgh, in whose hands “England, Ireland, and America” passed through, at least, six editions. It will be seen that at that early period Mr. Cobden foresaw the importance to Ireland of Trans-Atlantic steam packet stations at suitable points on her coast, as well as of the more general cultivation of flax, the great staple of Irish manufactures, on soil suitable for the purpose. He dealt with the questions of the national debt and of the military and naval establishments of the United States as he then found them. No one could at that time foresee that the institution of negro slavery would entail upon the

American nation so terrible a retribution as that with which they have since been visited, although Mr. Cobden was careful to point out that the existence of this "indelible stain upon their religion and government" would "serve to teach mankind that no deed of guilt or oppression can be perpetrated with impunity, even by the most powerful." This pamphlet also contains Mr. Cobden's earliest published contribution to the literature of free trade. It may further be remarked that almost immediately after he had seen these pages through the press, he paid his first visit to the United States. He landed in New York on Sunday, June 7th, 1835, and—reckoning the sea voyages—was absent exactly three months. The impressions which he had previously formed of the illimitable resources of the great Republic, of the ingenious and industrious character of the people, of the wide diffusion among them of the blessings of education, and of the boundless spirit of enterprise by which they were animated, were fully confirmed by what he saw with his own eyes; and on his return to England he found nothing in his pamphlet that required to be omitted or modified in the subsequent editions.

ENGLAND, IRELAND, & AMERICA.

PART I.—ENGLAND.

CONTENTS.—The Balance of Power.—Russia now, instead of France, the object of British Apprehension.—Notice of Mr. Urquhart's Pamphlet, "England, France, Russia, and Turkey"—Absurdity of all Apprehensions for our Trade.—Inutility of Bonaparte's "Commercial System."—Our Trade with Russia and Turkey contrasted.—Miserable State of the Turkish population.—What Turkey might become with a different People.—Our Colonial Policy; Canada, the West Indies, the East Indies.—Russia not an Anti-Commercial Nation.—"The Trifling Succour" asked for Turkey.—The Non-Intervention Principle.

To maintain what is denominated the true balance of European power, has been the fruitful source of wars from the earliest time; and it would be instructive, if the proposed limits of this work permitted it, to bring into review all the opposite struggles into which England has plunged, for the purpose of adjusting, from time to time, according to the ever-varying theories of her rulers, this national equilibrium. Let it suffice to say, that history exhibits us, at different periods, in the act of casting our sword into the scale of every European state. In the meantime, events have proclaimed, but in vain, how futile must be our attempts to usurp the sceptre of the Fates. Empires have arisen unbidden by us: others have departed, despite our utmost efforts to preserve

them. All have undergone a change so complete that, were the writers who only a century ago lauded the then existing state of the balance of Europe to reappear, they would be startled to find, in the present relations of the Continent, no vestige of that perfect adjustment which had been purchased at the price of so much blood. And yet we have able writers and statesmen of the present day, who would advocate a war to prevent a derangement of what we now choose to pronounce the just equipoise of the power of Europe.

For a period of six hundred years, the French and English people had never ceased to regard each other as natural enemies. Scarcely a generation passed over its allotted section of this vast interval of time, without sacrificing its victims to the spirit of national hate. It was reserved for our own day to witness the close of a feud, the bloodiest, the longest, and yet, in its consequences, the most nugatory of any that is to be found in the annals of the world. Scarcely had we time to indulge the first emotions of pity and amazement at the folly of past ages, when, as if to justify to the letter the sarcasm of Hume, when alluding to another subject,* we, the English people, are preparing, through the vehicles of opinion, the public press, to enter upon a hostile career with Russia.

* "Though, in a future age, it will probably become difficult to persuade some nations that any human two-legged creature could ever embrace such principles. And it is a thousand to one but those nations themselves shall have something full as absurd in their own creed, to which they will give a most implicit consent."

Russia, and no longer France, is the chimera that now haunts us in our apprehension for the safety of Europe: whilst Turkey, for the first time, appears to claim our sympathy and protection against the encroachments of her neighbours; and, strange as it may appear to the politicians of a future age, such is the prevailing sentiment of hostility towards the Russian government at this time in the public mind, that, with but few additional provocatives administered to it by a judicious minister through the public prints, a conflict with that Christian power, in defence of a Mahomedan people more than a thousand miles distant from our shores, might be made palatable, nay, popular, with the British nation. It would not be difficult to find a cause for this antipathy: the impulse, as usual with large masses of human beings, is a generous one, and arises, in great part, from emotions of pity for the gallant Polish people, and of indignation at the conduct of their oppressors—sentiments in which we cordially and zealously concur: and, if it were the province of Great Britain to administer justice to all the people of the earth—in other words, if God had given us, as a nation, the authority and the power, together with the wisdom and the goodness, sufficient to qualify us to deal forth his vengeance—then should we be called upon in this case to rescue the weak from the hands of their spoilers. But do we possess these favoured endowments? Are we armed with the powers of Omnipotence; or, on the contrary, can we discover another people rising into strength with a rapidity that threatens inevitably to overshadow us? Again, do we find ourselves to possess the virtue and the

wisdom essential to the possession of supreme power; or, on the other hand, have we not at our side, in the wrongs of a portion of our own people, a proof that we can justly lay claim to neither?

Ireland and the United States of America ought to be the subjects of our inquiry at this period, when we are, apparently, preparing ourselves to engage as parties to a question involving countries with which we are but remotely, and in comparison very little, interested. Before entering upon some reflections under each of these heads, we shall call the consideration of our readers to the affairs of Russia and Turkey; and we shall use, as the text of our remarks, a pamphlet that has recently made its appearance under the title of "England, France, Russia, and Turkey," to which our attention was first attracted by the favourable comments bestowed upon it by the influential portion of the daily press.

The writer* appears to be versed in the diplomatic mysteries of the Courts of St. Petersburg and Constantinople: indeed, he hints that he has been himself a party to the negotiations carried on with the Sublime Porte. He says, p. 77—"The details into which we have already entered may probably contain internal evidence of our opinion not having been formed in a closet, remote from the subject we are treating." And the concluding words of the pamphlet are calculated to lead to a similar inference; and they are moreover curious, as illustrating the tone of feeling with which the author regards the Russian government:—"Our words have been fewer

* [Mr. Urquhart, formerly Secretary of the English Embassy at Constantinople.]

than our thoughts; and, while we have to regret abler hands have not wielded our arms, we owe it to our subject to state, that others, unproduced, prudence forbade to draw, until the *hour of retribution arrives.*"

After a preliminary appeal to the sympathies of his readers in favour of Poland, he proceeds to ask, "Is the substance of Turkey to be added to the growth of Russia? Is the mammoth of the Sarmatian plains to become the leviathan of the Hesperian seas? Is another victim to be sacrificed within so short a time on the same altar, and because the same trifling succour is again withheld? Are the remains of Turkey to be laid upon the tomb of Poland, to exclude every ray of hope, and render its doom irrevocable?"

To what extent this trifling succour is meant to go, will be explained in the writer's own words, by and bye. But we propose, in this place, to inquire, what are the motives that England can have to desire to preserve the Ottoman Empire at the risk of a war, however trifling? In entering on this question, we shall, of course, premise, that no government has the right to plunge its people into hostilities, except in defence of their own national honour or interests. Unless this principle be made the rule of all, there can be no guarantee for the peace of any one country, so long as there may be found a people whose grievances may attract the sympathy, or invite the interference, of another state. How then do we find our honour or interests concerned in defending the Turkish territory against the encroachments of its Chris-

tian neighbour? It is not alleged that we have an alliance with the Ottoman Porte, which binds us to preserve its empire intact; nor does there exist, with regard to this country, a treaty between Russia and Great Britain (as was the case with respect to Poland) by which we became jointly guaranties for its separate national existence. The writer we are quoting puts the motive for our interference in a singular point of view; he says, "This obligation is imposed upon us, as members of the European community, by the approaching annihilation of another of our compeers. It is imposed upon us by the necessity of maintaining the consideration due to ourselves—the first element of political power and influence." From this it would appear to be the opinion of our author, that our being one of the nations of Europe imposes on us, besides the defence of our own territory, the task of upholding the rights, and perpetuating the existence, of all the other powers of the Continent—a sentiment common, we fear, to a very large portion of the English public. In truth, Great Britain has, in contempt of the dictates of prudence and self-interest, an insatiable thirst to become the peacemaker abroad; or, if that benevolent task fail her, to assume the office of gendarme, and keep in order, gratuitously, all the refractory nations of Europe. Hence does it arise, that, with an invulnerable island for our territory, more secure against foreign molestation than is any part of the coast of North America, we magnanimously disdain to avail ourselves of the privileges which nature offers to us, but cross the ocean, in quest of quadripartite treaties or quintuple

alliances, and, probably, to leave our own good name in pledge for the debts of the poorer members of such confederacies. To the same spirit of overweening national importance, may in great part be traced the ruinous wars and yet more ruinous subsidies of our past history. Who does not now see, that, to have shut ourselves in our own ocean fastness, and to have guarded its shores and its commerce by our fleets, was the line of policy we ought never to have departed from—and who is there that is not now *feeling*, in the burthen of our taxation, the dismal errors of our departure from this rule during the last war? How little wisdom we have gathered along with these bitter fruits of experience, let the subject of our present inquiry determine!

Judging from another passage in this pamphlet, it would appear that England and France are now to be the sole dictators of the international relations of all Europe. The following passage is dictated by that pure spirit of English vanity which has already proved so expensive an appendage to our character; and which, unless allayed by increased knowledge among the people, or fairly crushed out of us by our financial burthens, will, we fear, carry us still deeper into the vortex of debt:—"The squadrons of England and France anchored in the Bosphorus, they dictate their own terms to Turkey; to Russia they proclaim, that from that day they intend to arbitrate supremely between the nations of the earth."

We know of but one way in which the honour of this country may be involved in the defence and preservation of the Turkish empire; and that is,

through the indiscreet meddling in the intrigues of the seraglio, on the part of our diplomatists. After a few flourishes of the pen, in the style and spirit of the above quotations, shall have passed between the gentlemen of the rival embassies of St. James' and St. Petersburg, who knows but the English nation may, some day, be surprised by the discovery that it is compromised in a quarrel from which there is no honourable escape but by the disastrous course of a long and ruinous war?

If our honour be not committed in this case, still less shall we find, by examining a little more at length, that our *interests* are involved in the preservation of Turkey. To quote again from the pamphlet before us:—"Suffice it to say, that the countries consuming to the yearly value of thirty millions* of our exports, would be placed under the immediate control of the coalition (Russia, Prussia, and Austria), and, of course, under the regulations of the Russian tariff; not as it is to-day, but such as it would be when the mask is wholly dropped. What would be the effect on the internal state of England, if a considerable diminution of exportation occurred? But it is not only the direct effects of the tariffs of the coalition that are to be apprehended: would it not command the tariffs of Northern and Southern America." Passing over, as too chimerical for comment, the allusion to the New World, we here have the argument which has, immediately or remotely, decided us to undertake almost every war in which Great Britain has been involved—viz. *the defence of*

* Official value.

our commerce. And yet it has, over and over again, been proved to the world, that violence and force can never prevail against the natural wants and wishes of mankind: in other words, that despotic laws against freedom of trade never can be executed." "Trade cannot, will not, be forced; let other nations prohibit by what severity they please, interest will prevail: they may embarrass their own trade, but cannot hurt a nation whose trade is free, so much as themselves." So said a writer* a century ago, whilst experience down to our own day has done nothing but confirm the truth of his maxims; and yet people would frighten us into war, to prevent the forcible annihilation of our trade! Can any proofs be offered how visionary are such fears, more conclusive than are to be found in the history of Napoleon's celebrated war against English commerce? Let us briefly state a few particulars of this famous struggle. The subject, though familiar to everybody, is one the moral of which cannot be too frequently enforced.

The British Islands were, in 1807, declared by Bonaparte in a state of blockade, by those decrees which aimed at the total destruction of the trade of Great Britain. The Berlin and Milan edicts declared—

1. The British Isles were in a state of blockade.
2. All commerce and correspondence were forbidden. All English letters were to be seized in the post-houses.
3. Every Englishman, of whatever rank or quality, found in France, or the countries allied with

* Sir Matthew Decker.

her, was declared a prisoner of war. 4. All merchandise or property, of whatever kind, belonging to English subjects, was declared lawful prize. 5. All articles of English manufacture, and articles produced in her colonies, were, in like manner, declared contraband, and lawful prize.

France, Russia, Austria, Prussia, Holland, Italy, and the States of Germany, joined in this conspiracy against the commerce of England. To enforce more effectually these prohibitions, commissioners of rank were appointed to each of the principal sea-ports of the Continent. Now, let us mark well the result of this great confederation, which was formed for the avowed purpose of annihilating us as a trading people. The following is an account of the declared value of our exports of British products for each of the years mentioned, ending 5th of January:—

1804	.	.	.	£36,100,000
1805	.	.	.	37,100,000
1806	.	.	.	37,200,000
1807	.	,	.	39,700,000
1808	.	.	.	36,400,000
1809	.	.	.	36,300,000

It must be borne in mind, that the proclamation of war against our trade, above mentioned, was dated in 1807. It appears, then, by the preceding tabular view, that our commerce sustained a loss to the extent of about $7\frac{1}{2}$ per cent. in 1808 and 1809, as compared with 1806 and 1807; whilst the amount of exports in the year 1808, or 1809, if compared with the mean or average amount of the above six years, shews a diminution only of about two per cent. And

all this took place, be it remembered, when two-thirds of our foreign trade was confined to Europe.*

It is singular to observe, that, by the following table, the declared value of our exports, during the last six years, has remained nearly stationary, at a point varying from the average of the former series of years only by a fraction.

Below is a table of the exports of the products of British industry for six years, ending 1833:—

1828	.	.	.	£36,400,000
1829	.	.	.	36,200,000
1830	.	.	.	35,200,000
1831	.	.	.	37,700,000
1832	.	.	.	36,600,000
1833	.	.	.	36,000,000

But it must be borne in view, that, as the price of the raw materials of manufactures, such as wool, cotton, silk, iron, &c., together with the price of grain, has undergone a vast depreciation since the former periods, of course the actual exchangeable value of the money amounts in the second table is very much greater than in the first.

* It would be amusing, and full of romantic interest, to detail some of the ten thousand justifiable arts invented to thwart this unnatural coalition, which, of necessity, converted almost every citizen of Europe into a smuggler. Bourrienne, who was himself one of the commissioners at Hamburgh, gives some interesting anecdotes in his "Memoirs" under this head. The writer is acquainted with a merchant who was interested in a house that employed five hundred horses in transporting British goods, many of which were landed in Slavonia, and thence conveyed overland to France, at a charge of about £28. a cwt.—more than fifty times the present freight of merchandize from London to Calcutta!

In fact, the official value of our exports appears to have doubled, whilst the real or declared value has remained stationary. Bearing all this in mind, still, if we take into consideration the great increase of our exports, since 1809, to the Americas, and to Asia—the quarters where our commerce has been principally increasing—and if we also recollect the higher rate of profits at the earlier periods, it becomes a question if our trade with Europe, notwithstanding its rapid increase in population and wealth, has been benefited by the peace. It is exceedingly doubtful whether, whilst we were engaged in a war for the avowed emancipation of our commerce, our merchants were not, all the while, carrying on a more gainful traffic with the Continent than they now do, when its people have become our bloodless rivals at the loom and the spinning frame.

Where, then, is the wisdom of our fighting European battles in defence of a commerce which knows so well of itself how to elude all its assailants? And what have we to shew as a *per-contra* for the four hundred millions of debt incurred in our last continental wars?

We have dwelt at greater length upon this point, because the advocates of an intermeddling policy always hold up the alluring prospect of benefiting commerce; and we think we have said enough to prove, that Russian violence cannot destroy, or even sensibly injure our trade.

But it here becomes proper to ask, Are we warranted in the presumption that Russia is less inclined than other nations for trading with us? Our author,

indeed, says, p. 90, "Is it for England to allow an empire, a principle of whose existence is freedom of commerce, to be swallowed up by the most restrictive power on the face of the earth? Is it for England to allow the first commercial position in the world to be occupied by such a power? Is it for England to allow freedom of commerce to be extinguished in the only portion of Europe where it exists?"

We are at a loss to account for the ignorance that exists with reference to the comparative importance of our trade with Russia and with Turkey. The following tables exhibit the amounts of our exports to each of the two countries, at the dates mentioned:—

Exports to Russia.		Exports to Turkey.	
A.D.	£.	A.D.	£.
1700	60,000	1700	220,000
1750	100,000	1750	135,000
1790	400,000	1790	120,000
1800	1,300,000	1800	165,000
1820	2,300,000	1820	800,000*

By which it will be seen that, whilst Turkey has, in more than a century, quadrupled the amount of her purchases, Russia has, in the same interval of time, increased her consumption of our goods nearly forty-fold. Our exports, since the year 1700, have increased in a more rapid ratio to Russia than to any other country of Europe.

The rise of the commerce of St. Petersburg is unparalleled by anything we meet with in Europe,

* M'Culloch's Dict., 2d Edit., p. 671.

out of England. This city was founded in 1703; in 1714 only sixteen ships entered the port, whilst in 1833 twelve hundred and thirty-eight vessels arrived, and of which no less a proportion than six hundred and ninety-four were British.

Nor must it be forgotten, in drawing a comparison between the value of our trade with Russia and that with Turkey, that, whilst the former has, until very recently, possessed but little sea-coast, with but one good port, and that closed by ice one half of the year, the latter had, down to the date at which we have purposely brought the comparison, (when the Greek Islands still formed a portion of the Turkish empire,) more than double the extent of maritime territory of any power in Europe, situated in latitudes, too, the most favourable for commerce, including not only the best harbours in the world, but the largest river in Europe.

Neither must it be forgotten that the natural products of the Russian empire are restricted to corn, hemp, tallow, timber, and hides, with a few minor commodities; and that of these, the two important articles of corn and timber are subjected to restrictive, or we might almost say, prohibitive, duties at our hands; whilst Turkey contains the soil and climate adapted for producing almost every article of commerce, with the exception probably only of sugar and tea. We need only mention corn, timber, cotton-wool, sheep's-wool, wood and drugs for dyeing, wine and spirits, tobacco, silk, tallow, hides and skins, coffee, spices, and bullion—to exhibit the natural fertility of a country which is now rendered sterile

by the brutalizing rule of Mahomedanism. Nor can it be said that commerce is wholly free in Turkey, since the exportation of silk is burthened with a duty, and it is prohibited to export grain,* or any other article of necessity, including the product of the mines. It is true that this otherwise barbarous government has set an example to more civilized countries, by its moderate import duties on foreign productions; and this, we suspect, is the secret of that surprising tenacity of life which exists in the Ottoman empire, notwithstanding the thousand organic diseases that are consuming its body politic. But what avails to throw open the ports of a country to our ships, if the population will not labour to obtain the produce wherewith to purchase our commodities?

Plains, which Dr. Clarke compares to the fairest portions of Kent, capable of yielding the best silk and cotton, abound in Syria; but despotic violence has triumphed even over nature; and this province, which once boasted of Damascus and Antioch, of Tyre, Sidon, and Aleppo, has by the oppressive exactions of successive pachas, become little better than a deserted waste.

“Everywhere,” says Volney, speaking of Asiatic Turkey, “everywhere I saw only tyranny and misery, robbery and devastation. I found daily on my route abandoned fields, deserted villages, cities in ruins. Frequently I discovered antique monuments, remains of temples, of palaces, and of fortresses; pillars, aqueducts, and tombs: this spectacle led my mind

* [This prohibition does not now exist.]

to meditate on past times, and excited in my heart profound and serious thought. I recalled those ancient ages when twenty famous nations existed in these countries: I painted to myself the Assyrian on the banks of the Tigris, the Chaldean on those of the Euphrates, the Persian reigning from the Indus to the Mediterranean. I numbered the kingdoms of Damascus and Idumea, of Jerusalem and Samaria, the warlike states of the Philistines, and the commercial republics of Phœnicia. This Syria, said I, now almost unpeopled, could then count a hundred powerful cities; its fields were covered with towns, villages, and hamlets. Everywhere appeared cultivated fields, frequented roads, crowded habitations. What, alas! has become of those ages of abundance and of life? What of so many brilliant creations of the hand of man? Where are the ramparts of Nineveh, the walls of Babylon, the palaces of Persepolis, the temples of Baalbec and Jerusalem? Where are the fleets of Tyre, the docks of Arad, the looms of Sidon, and that multitude of sailors, of pilots, of merchants, of soldiers? Where are those labourers, those harvests, those flocks, and that crowd of living beings that then covered the face of the earth? Alas! I have surveyed this ravaged land—I have visited the places which were the theatre of so much splendour—and have seen only solitude and desertion. The temples are crumbled down; the palaces are overthrown; the ports are filled up; the cities are destroyed; the earth, stripped of its inhabitants, is only a desolate place of tombs."

Nor less hideous is the picture given to us by another eloquent eye-witness of the desolation of this

once flourishing region. "A few paltry shops expose nothing but wretchedness to view, and even these are frequently shut, from apprehension of the passage of a Cadi.

"Not a creature is to be seen in the streets, not a creature at the gates, except now and then a peasant gliding through the gloom, concealing under his garments the fruits of his labour, lest he should be robbed of his hard earnings by the rapacious soldier. The only noise heard from time to time is the galloping of the steed of the desert; it is the janissary, who brings the head of the Bedouin, or returns from plundering the unhappy fellah."*

A still more recent traveller, and one of our own countrymen, has these emphatic words, when speaking of the Turkish territory: "Wherever the Osmanli has trod, devastation and ruin mark his steps, civilization and the arts have fled, and made room for barbarism and the silence of the desert and the tomb."†

But why need we seek for foreign testimony of the withering and destroying influences of Mahomedanism? The Turks themselves have a proverb, which says, "Where the sultan's horse has trod, there no grass grows."

"And where the Spahi's hoof hath trod,
The verdure flies the bloody sod."

BYRON.

Our limits do not allow us to dwell on this portion of our task; suffice it to say, that, beneath the sway of Ottoman violence, the pursuits of agriculture and

* Chateaubriand.

† Macfarlane's Turkey.

commerce are equally neglected, in regions that once comprised the mart and granary of the world. *No ship was ever seen to leave a Turkish port, manned with Turkish sailors, upon the peaceful errand of foreign mercantile traffic.* On the ocean, as upon land, this fierce people have always been the scourge of humanity, and a barrier to the progress of commerce and civilization. In their hands, Smyrna, which was termed by the ancients the ornament of Asia, and Constantinople, chosen for the unrivalled seat of empire by one who possessed the sovereignty of the world—these two cities, adapted by nature to become the centres of a vast trade, are now, through the barbarism and indolence of their rulers, little better than nurseries of the plague!

What shall we say more, to prove that England can have no interest in perpetuating the commercial bondage of such a land as we have been describing?

Before quitting the consideration of this part of our subject, we will, for a moment, give way to our imagination, and picture the results that would follow, supposing that the population of the United States of America could be moved from their present position on the earth's surface, and in a moment be substituted in the place of the inhabitants of Turkey. Very little difference of latitude opposes itself to the further supposition, that the several pachalics, being transformed into free states, should be populated by the natives of such districts of the New World as gave the fittest adaptation to their previous habits of labour. Now, let us picture this empire, after it had been for fifty years only subject

to the laws, the religion, and the industry of such a people.

Constantinople, outrivalling New York, may be painted, with a million of free citizens, as the focus of all the trade of eastern Europe. Let us conjure up the thousands of miles of railroads, carrying to the very extremities of this empire—not the sanguinary satrap, but—the merchandise and the busy traders of a free state; conveying—not the firman of a ferocious sultan, armed with death to the trembling slave, but—the millions of newspapers and letters, which stimulate the enterprise and excite the patriotism of an enlightened people. Let us imagine the Bosphorus and the sea of Marmora swarming with steam-boats, connecting the European and Asiatic continents by hourly departures and arrivals; or issuing from the Dardanelles, to reanimate once more with life and fertility the hundred islands of the Archipelago; or, conceive the rich shores of the Black Sea in the power of the New Englander, and the Danube pouring down its produce from the plains of Moldavia and Wallachia, now subject to the plough of the hardy Kentuckian. Let us picture the Carolinians, the Virginians, and the Georgians, transplanted to the coasts of Asia Minor, and behold its hundreds of cities again bursting from the tomb of ages, to recal religion and civilization to the spot from whence they first issued forth upon the world. Alas! that this should be only an illusion of the fancy!

There remains another argument in favour of an interposition on our part in defence of Turkey for us

to notice; and it points to the danger our colonies might be in, from any movements which Russia should make eastward. "Our Indian possessions," says the pamphlet before quoted: "shall we fight for them on the Dnieper, as directing the whole Mussulman nation, or shall we fight for them on the Indus, at Bagdad, or in Persia, single-handed; close to the insurrection she will raise in her rear, and when she is in possession of Turkey?"

We might have passed over this point as too chimerical for comment, were it not that it involves a question upon which, we believe, there is greater misapprehension than upon any other subject that engages the attention of our countrymen. Supposing Russia or Austria to be in possession of the Turkish dominions, would she not find her attention and resources far too abundantly occupied in *retaining* the sovereignty over fifteen millions of fierce and turbulent subjects, animated with warlike hatred to their conquerors, and goaded into rebellion by the all-powerful impulse of a haughty and intolerant religion, to contemplate adding still further to her embarrassments by declaring war with England, and giving the word of march to Hindostan? Who does not perceive that it could not, for ages at least, add to the *external power* of either of these states, if she were to get possession of Turkey by force of arms? Is Russia stronger abroad by her recent perfidious incorporation of Polish territory? Would Holland increase her power if she were to reconquer her Belgic provinces to-morrow? Or, to come to our own doors, for example, was Great Britain more

powerful whilst, for centuries, she held Ireland in disaffected subjection to her rule ; or was she not rather weakened, by offering, in the sister island, a vulnerable point of attack to her continental enemies ?

But supposing, merely by way of argument, that Russia meditated hostile views towards our eastern colonies.

Constantinople is about three thousand miles distant from Calcutta : are our Indian possessions of such value to the British people that we must guard them with operations so extended and so costly as would be necessary if the shores of the Bosphorus are to be made the outpost for our armies of the Ganges ? Surely it becomes a momentous question, to the already over-burdened people of England, to ascertain what advantages are to be reaped from enterprises like this, which, whatever other results they may chance to involve, are certain to entail increased taxation on themselves.

Nothing, we believe, presents so fair a field for economical analysis, even in this age of new lights, as the subject of colonization. We can, of course, only briefly allude to the question ; but, in doing so, we suggest it as one that claims the investigation of independent public writers, and of all those members of the legislature who are of and for the people, distinct from selfish views or aristocratic tendencies.

Spain lies, at this moment, a miserable spectacle of a nation whose own natural greatness has been immolated on the shrine of transatlantic ambition. May not some future historian possibly be found recording a similar epitaph on the tomb of Britain ?

In truth, we have been planting, and supporting, and governing countries upon all degrees of habitable, and some that are not habitable, latitudes of the earth's surface; and so grateful to our national pride has been the spectacle, that we have never, for once, paused to inquire if our interests were advanced by so much nominal greatness. Three hundred millions of permanent debt have been accumulated—millions of direct taxation are annually levied—restrictions and prohibitions are imposed upon our trade in all quarters of the world, for the acquisition or maintenance of colonial possessions; and all for what? That we may repeat the fatal Spanish proverb—"The sun never sets on the King of England's dominions." For we believe that no candid investigator of our colonial policy will draw the conclusion, that we have derived, or shall derive, from it advantages that can compensate for these formidable sacrifices.

But we are upon the verge of a novel combination of commercial *necessities*, that will altogether change the relations in which we have hitherto stood with our colonies. We call them necessities, because they will be forced upon us, not from conviction of the wisdom of such changes, but by the irresistible march of events. The New World is destined to become the arbiter of the commercial policy of the Old. We will see in what manner this is in operation.

At the passing of the Negro Emancipation Act, an effort was made by the merchants of Liverpool, trading to South America, to prevail on the legislature to abolish the discriminating duties on West India

sugar, which operated so severely on the trade with the Brazils. It was finally decided, that the bounty in favour of the importation of our colonial productions should be continued for ten years. At the end of this period, *if not long before*, therefore, the monstrous impolicy of sacrificing our trade with a new continent, of almost boundless extent of rich territory, in favour of a few small islands, with comparatively exhausted soils, will cease to be sanctioned by the law. What will then follow? If we no longer offer the exclusive privileges of our market to the West Indians, we shall cease, as a matter of justice and necessity, to compel them to purchase exclusively from us. They will be at liberty, in short, to buy wherever they can buy goods cheapest, and to sell in the dearest market. They must be placed in the very same predicament as if they were not a part of his Majesty's dominions. Where, then, will be the semblance of a plea for putting ourselves to the expense of governing and defending such countries? Let us apply the same test to our other colonies.

It is no longer a debateable question, amongst enlightened and disinterested minds, that the privileges which we give to the Canadian exporters of timber to Britain, and by which alone we command a monopoly of that market for our manufactures, are founded on gross injustice to the people of this country, and are calculated to give a forced misdirection, as all such bounties are, to the natural industry of these colonies, by causing the investment of capital in the preparing and shipping of inferior timber, which would otherwise seek its legitimate employment in the pursuit of agriculture. This monopoly must

yield to the claims of the United States and Baltic trades. Nor have we been contented with sacrificing our own interests to the promotion of a fictitious prosperity in our colonies, but we destroy the interests of one of these, in the vain hope of benefiting another. Thus, in the same spirit of withering protection, we have awarded to the West Indies a monopoly of the trade to Canada, whilst, to the latter, we give the privilege of exclusively supplying the former with corn and timber:* and all this whilst, at the same time, these islands lie within half the distance of the shores of the United States, whose maritime districts possess all the identical exchangeable products with Canada, and teem with a population of industrious and enterprising people, eager for a commerce with these prohibited islands.

True, the Government of the United States has lately compelled us, *in self-defence*, to relax from this system; and every one now sees that the same motive prescribes that the commerce of the West Indies be wholly, and without restriction, thrown open to the people of the neighbouring continent, from which it has hitherto been shut out only by means of unnatural prohibitions.

We have said that the New World is the arbiter of the commercial policy of the Old; and we will now see in what way this is the fact in the case of our East Indian trade. Hitherto it has been the custom to impose discriminating duties in favour of the products of these colonies; and this, and this only, has given us the right to compel these dependencies, in

* [These monopolies have, of course, long since been abolished.]

return, to restrict themselves to the purchase of our manufactures. We have seen that this restrictive policy must be abandoned in the case of the West Indies and Canada, and still less shall we find it practicable to uphold it in the East. Our leading imports from this quarter must be cotton-wool, silk, indigo, and sugar. The last of these articles, as we have already shewn in speaking of the West Indies, the Brazils have, by its successful culture, forced us to remove from the list of protected commodities; whilst the three first, being raw products, in the supply and manufacture of which we are so closely checkmated by the competition of the United States or of European countries, it would be madness to think of subjecting the fabrication of them to restrictive duties, however trifling.

We shall then be under the necessity of levying the same duties on the cotton, sugar, &c. imported from the East Indies, as on similar products coming from North or South America; and it will follow, of course, that, as we offer no privileges in our markets to the planters of Hindostan, we can claim none for our manufacturers in theirs. In other words, they must be left at liberty to buy wherever they can purchase cheapest, and to sell where they can do so at the dearest rate; they will, in all respects, be, commercially and fiscally speaking, the same to us as though they did not form a part of his Majesty's dominions. Where then will be the plea for subjecting ourselves to the heavy taxation required to maintain armies and navies for the defence of these colonies?

Provided our manufactures be cheaper than those of our rivals, we shall command the custom of these colonies by the same motives of self-interest which bring the Peruvians, the Brazilians, or the natives of North America, to clothe themselves with the products of our industry; and, on the other hand, they will gladly sell to us their commodities through the same all-powerful impulse, provided we offer for them a more tempting price than they will command in other markets.

We have thus hastily and incidentally glanced at a subject which we predict will speedily force itself upon the attention of our politicians; and we know of nothing that would be so likely to conduce to a diminution of our burdens, by reducing the charges of the army, navy, and ordnance, (amounting to fourteen millions annually,) as a proper understanding of our relative position with respect to our colonial possessions.* We are aware that no power was ever yet known, voluntarily, to give up the dominion over a part of its territory. But if it could be made manifest to the trading and industrious portions of this nation, who have no honours, or interested ambition of any kind, at stake in the matter, that, whilst our dependencies are supported at an expense to them, in direct taxation, of more than five millions annually, they serve but as gorgeous and ponderous appendages to swell our ostensible grandeur, but, in reality, to complicate and magnify our government expenditure, without improving our

* [The charges for army, navy and ordnance for the year 1865, amounted to £25,280,925.]

balance of trade—surely, under such circumstances, it would become at least a question for anxious inquiry with a people so overwhelmed with debt, whether those colonies should not be suffered to support and defend themselves, as separate and independent existences.

Adam Smith, more than sixty years ago, promulgated his doubts of the wisdom and profitableness of our colonial policy; at a time, be it well remembered, when we were excluded, by the mother countries, from the South American markets, and when our West Indian possessions appeared to superficial minds an indispensable source of vast wealth to the British empire. Had he lived to our day, to behold the United States of America, after freeing themselves from the dominion of the mother country, become our largest and most friendly commercial connection—had he lived also to behold the free states of South America only prevented from outstripping in magnitude all our other customers by the fetters which an absurd law of exclusive dealing with those very West Indian Colonies has imposed on our commerce—how fully must his opinions have coincided with all that we have urged on this subject!

Here let us observe, that it is worthy of surprise how little progress has been made in the study of that science of which Adam Smith was, more than half a century ago, the great luminary. We regret that no society has been formed for the purpose of disseminating a knowledge of the just principles of trade. Whilst agriculture can boast almost as many associations as there are British counties; whilst every city in the kingdom contains its botanical, phrenological,

or mechanical institutions, and these again possess their periodical journals, (and not merely these, for even *war* sends forth its *United Service Magazine*,)—we possess no association of traders, united together for the common object of enlightening the world upon a question so little understood, and so loaded with obloquy, as free trade.

We have our Banksian, our Linnæan, our Hunterian Societies; and why should not at least our greatest commercial and manufacturing towns possess their Smithian Societies, devoted to the purpose of promulgating the beneficent truths of the “*Wealth of Nations?*” Such institutions, by promoting a correspondence with similar societies that would probably be organized abroad, (for it is our example in questions affecting commerce that strangers follow,) might contribute to the spread of liberal and just views of political science, and thus tend to ameliorate the restrictive policy of foreign governments, through the legitimate influence of the opinions of their people.

Nor would such societies be fruitless at home. Prizes might be offered for the best essays on the corn question; or lecturers might be sent to enlighten the agriculturists, and to invite discussion upon a subject so difficult and of such paramount interest to all.

The question of the policy or justice of prohibiting the export of machinery might be brought to the test of public discussion; these, and a thousand other questions might, with usefulness, engage the attention of such associations.

But to return to the consideration of the subject more immediately before us.

It will be seen, from the arguments and facts we have urged, and are about to lay before our readers, that we entertain no fears that our interests would be likely to suffer from the aggrandizement of a Christian power at the expense of Turkey, even should that power be Russia. On the contrary, we have no hesitation in avowing it as our deliberate conviction, that not merely Great Britain, but the entire civilized world, will have reason to congratulate itself, the moment when that territory again falls beneath the sceptre of any other European power whatever. Ages must elapse before its favoured region will become, as it is by nature destined to become, the seat and centre of commerce, civilization, and true religion; but the first step towards this consummation must be to convert Constantinople again into that which every lover of humanity and peace longs to behold it—the capital of a Christian people. Nor let it be objected by more enlightened believers, that the Russians would plant that corrupted branch of our religion, the Greek church, on the spot where the first Christian monarch erected a temple to the true faith of the Apostles. We are no advocates of that church, with its idolatrous worship and pantomimic ceremonials, fit only to delude the most degraded and ignorant minds; but we answer—put into a people's hands the Bible in lieu of the Koran—let the religion of Mahomet give place to that of Jesus Christ; and human reason, aided by the printing-press and the commerce of the world, will not fail to

erase the errors which time, barbarism, or the cunning of its priesthood, may have engrafted upon it.

But to descend from these higher motives to the question of our own interests, to which, probably, as politicians, we ought to confine our consideration.

Nothing we confess, appears so opposed to the facts of experience, as the belief which has been so industriously propagated in this country, that Russia, if she held the keys of the Dardanelles, would exclude all trade from the Black Sea and the Sea of Marmora. The writer so often quoted, says—"On the occupation of the Dardanelles, disappears the importance of our possessions in the Levant. They were only valuable because the Turks held these straits. When Russia is there, they are valueless, and will soon be untenable." It might be a sufficient reply to these assertions, unsupported by facts or reasoning, to demand of what use will these maritime possessions be to Russia, or any other power, unless for the purposes of trade? Why did the government of St. Petersburg, for nearly a century, bend a steady and longing eye on the ports of the Euxine, but for the facilities which the possession of one of them would give to the traffic between the interior provinces of Russia and the Mediterranean?

We write, however, with no motive but to disabuse the public mind on an important question; and as we prefer in all cases to appeal to facts, we shall here give a few particulars of the rise and progress of the only commercial port of consequence as yet established in the Black Sea.

The first stone of the town of Odessa was laid, by order of Catherine, in 1792.

Previously to this, the Euxine was so little visited by our mariners, that every kind of absurd story was advanced and credited respecting the danger of its navigation; the very name was held to be only synonymous with the black and dismal character of its storms, or the perilous mists that it was imagined constantly shrouded its surface. The Danube was, in a like spirit of credulity, suspected to pour from its channel so vast a deposit of mud as to fill the Black Sea with shoals, that threatened, in the course of a few ages, to convert its waters into dry land; whilst this river the noblest in Europe, sealed by Turkish jealousy, thus blotting out, as it were, from commercial existence, that vast pastoral district through which it flowed—this stream, whose course lay almost in the centre of Christendom, was as little known as the great yellow river of China.

Odessa has fully equalled the rapid commercial rise of St. Petersburg, to which only in importance it is now the second in the Russian empire. These two ports, which we are taught to believe belong to the most anti-commercial people, present, singularly enough, the two most astonishing instances in Europe of quick advances in wealth, trade, and population.

The population of Odessa is estimated at 40,000 souls. The exportation of tallow has increased in two years twenty-fold; thus civilizing and enriching extensive districts which must have remained in comparative barbarism, had not this outlet been found for their produce. During the same time, the

breed of sheep has been much improved in these vast southern regions of the Russian territory, by the introduction of the merinoes; and the consequent increase of the export of wool has been very considerable.

The amount of imports is stated at 30,000,000 roubles.

We subjoin a statement of the movement of Russian and British shipping at this port, to shew that here, as at St. Petersburg and elsewhere, the commerce of England finds a proportionate extension with the trade of other countries.

* M'Culloch's Dictionary, p. 858; a work of unrivalled labour and usefulness, which ought to have a place in the library of every merchant or reader who feels interested in the commerce and statistics of the world. We will quote from another part of this valuable work, the opinion of the author upon the influences of Russian sway in this quarter:—"On the whole, however, a gradual improvement is taking place; and whatever objections may, on other grounds, be made to the encroachments of Russia in this quarter, there can be no doubt that, by introducing comparative security and good order into the countries under her authority, she has materially improved their condition, and accelerated their progress to a more advanced state."—P. 1108.

This town has latterly been declared a free port, with exemption from taxes; and, therefore, we cannot but anticipate for it a much more rapid career in the time to come.

Already have its merchants appeared as our customers on the Exchange of Manchester; and it only requires that we remove our suicidal restrictions on the import of corn, to render Odessa ultimately one of the chief contributors to the trade of Liverpool.

The influence of Russia, since she has gained a settlement on the shores of the Euxine, has been successfully exercised in throwing open the navigation of its waters, with those of the Danube, to the world; and this noble river has at length been subjected to the dominion of steam, which will, beyond all other agents, tend most rapidly to bring the population of its banks within the pale of civilization. A Danube Steam Navigation Joint Stock Company has been projected, and will, in all probability, be in operation next summer; and, as this will give the route from the west of Europe to Turkey, by the way of Vienna, the preference, there is no reason to doubt that eventually this river will enjoy a considerable traffic both of passengers and merchandise.

We have probably said sufficient to prove, from facts, that Russia is not an anti-commercial nation.

We have endeavoured likewise to shew that alarms for the safety of our eastern possessions ought not to induce us to go to war to check a movement three thousand miles removed from their capital; and to those who are inspired with fear for our European

commerce, from the aggrandisement of Russia, we have answered by shewing that Napoleon, when he had all Europe at his feet, could not diminish our trade eight per cent.

What then remains to be urged in favour of the policy of this Government putting its over-taxed people to the cost of making warlike demonstrations in favour of Turkey? At the moment when we write, a British fleet is wintering in the gulf of Vouria, the cost of which, at a low estimate, probably exceeds two millions, to say nothing of living *matériel*; and this is put in requisition in behalf of a country with which we carry on a commerce less in annual amount than is turned over by either of two trading concerns that we could name in the city of London!

But we are to await a regeneration of this Mahometan empire. Our arms, we are told, are not only to defend its territory, but to reorganize or reconstruct the whole Turkish government, and to bestow upon its subjects improved political institutions. Let us hear what the pamphlet before us says upon this subject, and let it be borne in mind that the writer's sentiments have been applauded by some of our influential journals:—"It is the policy of England which alone can save her: it is therefore no trivial or idle investigation which we have undertaken, since it is her political elements that we have to embody into a new political instrument."—P. 54. Again—"In the capital, in the meanest villages, in the centre of communications, on the furthest frontiers, a feeling of vague but intense expectation is spread,

which will not be satisfied with less *at our hands* than internal reorganization and external independence.”—P. 62. Again—“Unless anticipated by visible intervention on the part of England, which will relieve them from the permanent menace of the occupation of the capital, and which *will impose on the government (!)* the necessity of a change of measures, a catastrophe is inevitable.”—P. 63. And again—“An empire which in extent, in resources, in population, in position, and in individual qualities and courage—in all, in fact, save instruction—is one of the greatest on the face of the earth, is brought to look with ardent expectation for the arrival of a foreign squadron, and a body of auxiliaries in its capital, and to expect from their presence *the reformation of internal abuses (!)* and the restoration of its political independence.”—P. 73.

To protect Turkey against her neighbour, Russia—to defend the Turks against their own government—to force on the latter a constitution, we suppose—to redress all internal grievances in a state where there is no law but despotism! Here, then, in a word, is the “*trifling succour*” (p. 2) which we are called on to render our ancient ally; and if the people of Great Britain desired to add another couple of hundreds of millions to their debt, we think a scheme is discovered by which they may be gratified, without seeking for quarrels in any other quarter.

If such propositions as these are, however, to be received gravely, it might be suggested to inquire, would Russia, would Austria, remain passive, whilst another power sent her squadrons and her armies

from ports a thousand miles distant to take possession of the capital and supersede the government of their adjoining neighbour? Would there be no such thing as Russian or Austrian jealousy of British aggrandisement, and might not our Quixotic labours in behalf of Mahometan regeneration be possibly perplexed by the co-operation of those Powers? These questions present to us the full extent of the dilemma in which we must be placed, if we ever attempt an internal interference with the Ottoman territory.

Without the consent and assistance of Russia and Austria, we should not be allowed to land an army in that country. We might, it is true, blockade the Dardanelles, and thus at any time annihilate the trade of Constantinople and the Black Sea. But our interests would suffer by such a step; and the object of intermeddling at all is, of course, to benefit, and not destroy our trade. We must, then, if we would remodel Turkey, act in conjunction with Russia, Austria, and France. Would the two former of these powers be likely to lend a very sincere and disinterested co-operation, or must we prepare for a game of intrigues and protocols?*

* We here give an extract from the correspondence of a London morning paper, upon the affairs of Greece, that is illustrative of the case in hand :—

“*Nauplia*, Nov. 28, 1834.—If we (the English people) had not been paying for fleets, destroyers of fleets, protocols, loans, extraordinary ambassadors, presidents, couriers, subsidies, etc., in the Levant, we might not have been surprised at the present state of things. But taking into account the talents of Palmerston and S. Canning, and the straightforward, open, John Bull policy of their agent here, really it is wonderful how they can have allowed

These are the probable consequences of our interposing in the case of Turkey ; and, from the danger of which, the only alternative lies in a strict neutrality. We are aware that it would be a novel case for England to remain passive, whilst a struggle was going on between two European powers ; and we know, also, that there is a predilection for continental politics amongst the majority of our countrymen, that would render it extremely difficult for any adminis-

the others powers to have made such a mess of the business. But the worst part of the affair is, that things are quite as complicated now as they were a week after the breaking out of the Revolution. Here we have a fleet reaching from Gibraltar to the Dardanelles—here we have the Russians as busy as ever—and here we have *not* the proceeds of the loan which our (the British) government has guaranteed, nor have we a revenue that will pay the interest of it.” Amusingly enough, we find, in another column of the very same copy of the same journal, a letter from its correspondent, dated at Constantinople, Nov. 25, from which the following is extracted :—“Now is the time to step forward ; a cracking south-wester and a bold front are all that would be wanted ; and our ships once at anchor in the Bosphorus, adieu to the ambitious views of Russia ! They would burst like a child’s bubble. Adieu to the stupid notions about the inevitable dissolution of Turkey. Adieu to the accursed treaty which binds lovely Turkey to a remorseless ravager !

* * * *

One of her vain finesses is now visible in Austria, where a hired press would make the world believe that Austria is seriously opposed to Russian schemes. It does not require a very long or sharp look-out to see that the two absolute governments are acting in collusion.

* * * *

It is a petty manœuvre to lead us from the real point of attack—a mere feint ; we must pay no attention to it, but direct all our strength and energy to the true point, Constantinople ; that Constantinople which, once in Russia’s hands, becomes the mistress of Europe.”

tration to preserve peace under such circumstances. Public opinion must undergo a change ; our ministers must no longer be held responsible for the every-day political quarrels all over Europe ; nor, when an opposition member of Parliament, or an opposition journalist,* wishes to assail a foreign secretary, must he be suffered to taunt him with neglect of the honour of Great Britain, if he should prudently abstain from involving her in the dissensions that afflict distant communities.

There is no remedy for this but in the wholesome exercise of the people's opinion in behalf of their own interests. The middle and industrious classes of England can have no interest apart from the preservation of peace. The honours, the fame, the emoluments of war belong not to them ; the battle-plain is

* Extract from a London paper, *October 22, 1834* :—" As at home, so abroad ; the Whigs have failed in all their negotiations, and not one question have they settled, except the passing of a Reform Bill and a Poor Law Bill. The Dutch question is undecided ; the French are still at Ancona ; Don Carlos is fighting in Spain ; Don Miguel and his adherents are preparing for a new conflict in Portugal ; Turkey and Egypt are at daggers drawn ; Switzerland is quarrelling with her neighbouring states about Italian refugees ; Frankfort is occupied by Prussian troops, in violation of the treaty of Vienna ; Algiers is being made a large French colony, in violation of the promises made to the contrary by France in 1829 and 1830 ; ten thousand Polish nobles are still proscribed and wandering in Europe ; French gaols are full of political offenders, who, when liberated or acquitted, will begin again to conspire. In one word nothing is terminated." It is plain that, if this writer had his will, the Whigs would leave nothing in the world for Providence to attend to.

the harvest-field of the aristocracy, watered with the blood of the people.

We know of no means by which a body of members in the reformed House of Commons could so fairly achieve for itself the patriotic title of a national party, as by associating for the common object of deprecating all intervention on our part in continental politics. Such a party might well comprise every representative of our manufacturing and commercial districts, and would, we doubt not, very soon embrace the majority of a powerful House of Commons. At some future election, we may probably see the test of "*no foreign politics*" app'ied to those who offer to become the representatives of free constituencies. Happy would it have been for us, and well for our posterity, had such a feeling predominated in this country fifty years ago ! But although, since the peace, we have profited so little by the bitter experience of the revolutionary wars as to seek a participation in all the subsequent continental squabbles, and though we are bound by treaties, or involved in guarantees, with almost every state of Europe ; still the coming moment is only the more proper for adopting the true path of national policy, which always lies open to us.

We say the coming moment is only the more fit for withdrawing ourselves from foreign politics ; and surely there are signs in Europe that fully justify the sentiment. With France, still in the throes of her last revolution, containing a generation of young and ardent spirits, without the resources of commerce, and therefore burning for the excitement and em-

ployment of war; with Germany, Prussia, Hungary, Austria,* and Italy, all dependent for tranquillity upon the fragile bond of attachment of their subjects to a couple of aged paternal monarchs; with Holland and Belgium, each sword in hand; and with Turkey, not so much yielding to the pressure of Russia, as sinking beneath an inevitable religious and political destiny;—surely, with such elements of discord as these fermenting all over Europe, it becomes more than ever our duty to take natural shelter from a storm, from entering into which we could hope for no benefits, but might justly dread renewed sacrifices.

Nor do we think it would tend less to promote the ulterior benefits of our continental neighbours than our own, were Great Britain to refrain from participating in the conflicts that may arise around her. An onward movement of constitutional liberty must continue to be made by the less advanced nations of Europe, so long as one of its greatest families holds out the example of liberal and enlightened freedom. England, by calmly directing her undivided energies to the purifying of her own internal institutions, to the emancipation of her commerce—above all, to the unfettering of her press from its excise bonds—would, by thus serving as it were for the beacon of other nations, aid more effectually the cause of political progression all over the continent, than she could possibly do by plunging herself into the strife of European wars.

For, let it never be forgotten, that it is not by

* Since writing this, the death of the Emperor of Austria is announced.

means of war that states are rendered fit for the enjoyment of constitutional freedom ; on the contrary, whilst terror and bloodshed reign in the land, involving men's minds in the extremities of hopes and fears, there can be no process of thought, no education going on, by which alone can a people be prepared for the enjoyment of rational liberty. Hence, after a struggle of twenty years, *begun in behalf of freedom*, no sooner had the wars of the French revolution terminated, than all the nations of the continent fell back again into their previous state of political servitude, and from which they have, ever since the peace, been *qualifying* to rescue themselves, by the gradual process of intellectual advancement. Those who, from an eager desire to aid civilization, wish that Great Britain should interpose in the dissensions of neighbouring states, would do wisely to study, in the history of their own country, how well a people can, by the force and virtue of native elements, and without external assistance of any kind, work out their own political regeneration : they might learn too, by their own annals, that it is only when at peace with other states that a nation finds the leisure for looking within itself, and discovering the means to accomplish great domestic ameliorations.

To those generous spirits we would urge, that, in the present day, commerce is the grand panacea, which, like a beneficent medical discovery, will serve to inoculate with the healthy and saving taste for civilization all the nations of the world. Not a bale of merchandise leaves our shores, but it

bears the seeds of intelligence and fruitful thought to the members of some less enlightened community ; not a merchant visits our seats of manufacturing industry, but he returns to his own country the missionary of freedom, peace, and good government—whilst our steam boats, that now visit every port of Europe, and our miraculous railroads, that are the talk of all nations, are the advertisements and vouchers for the value of our enlightened institutions.

In closing this part of our task, we shall only add, that, whatever other plea may in future be allowed to induce us to embark in a continental conflict, we trust we have proved, that so far as our commerce is concerned, it can neither be sustained nor greatly injured abroad by force or violence. The foreign customers who visit our markets are not brought hither through fears of the power or the influence of British diplomatists: they are not captured by our fleets and armies: and as little are they attracted by feelings of love for us; for that “there is no friendship in trade,” is a maxim equally applicable to nations and to individuals. It is solely from the promptings of self-interest, that the merchants of Europe, as of the rest of the world, send their ships to our ports to be freighted with the products of our labour. The self-same impulse drew all nations, at different periods of history, to Tyre, to Venice, and to Amsterdam; and if, in the revolution of time and events, a country should be found (which is probable) whose cottons and woollens shall be cheaper than those of England and the rest of the world, then to

that spot—even should it, by supposition, be buried in the remotest nook of the globe—will all the traders of the earth flock; and no human power, no fleets or armies, will prevent Manchester, Liverpool, and Leeds, from sharing the fate of their once proud predecessors in Holland, Italy, and Phœnicia.*

* Lest it might be said that we are advocating Russian objects of ambition, we think it necessary to observe, that we trust the entire spirit of this pamphlet will shew that we are not of *Russian politics*. Our sole aim is the *just interests* of England, regardless of the objects of other nations.

PART II.—IRELAND.

CONTENTS.—British Ignorance respecting Ireland—England the Cause of Irish Barbarism—Political Tendency of the Catholic Religion—English Persecution of the Irish Religion—The Church of England in Ireland—Miserable State of the Irish People—Urgent Necessity for an Improvement—A Poor-law for Ireland—Emigration—Projected Communication between New York and London in twelve days, by way of Ireland—Evils of a Dominant Church.

WHILST, within the last twenty years, our sympathies have gone forth over the whole of Europe, in quest of nations suffering from, or rising up against the injustice of their rulers; whilst Italy, Greece, Spain, France, Portugal, Turkey, Belgium, and Poland, have successively filled the newspapers with tales of their domestic wrongs; and whilst our diplomatists, fleets, and armies have been put in motion at enormous cost, to carry our counsel, or, if needful, our arms, to the assistance of the people of these remote regions; it is an unquestionable fact, that the population of a great portion of our own empire has, at the same time, presented a grosser spectacle of moral and physical debasement than is to be met with in the whole civilized world.

If an intelligent foreigner, after having travelled through England, Scotland, and Wales, and enjoyed the exhibition of wealth, industry, and happiness, afforded everywhere by the population of these realms, were, when upon the eve of departing for the shores of Ireland, to be warned of the scenes of wretchedness and want that awaited him in that

country, he would naturally assume the cause in some such question as this:—"The people are no doubt indolent, and destitute of the energy that belongs to the English character?" If it were answered, that, so far from such being the case, the Irish are the hardiest labourers on earth; that the docks and canals of England, and the railroads of America, are the produce of their toil; in short, that they are the hewers of wood and drawers of water for other nations—then the next inquiry from this stranger would probably be in some such form as this:—"But their soil no doubt is barren, and their climate inhospitable: nature has, besides, probably denied to them the rivers and harbours which are essential to commerce?" What would be his surprise to be answered, that, in natural fertility, and in the advantages of navigable streams, lakes, and harbours, Ireland is more favoured than England, Scotland, or Wales.*

* "And sure it is yet a most beautiful and sweet country as any is under heaven, being stored throughout with many goodly rivers, replenished with all sorts of fish most abundantly, sprinkled with many very sweet islands and goodly lakes, like inland seas that will carry even shippes upon their waters; adorned with goodly woods, even fit for building of houses and shippes so commodiously, as that, if some princes in the world had them, they would soon hope to be lords of all the seas, of all the world; also full of very good ports and havens opening upon England, as inviting us to come unto them, to see what excellent commodities that country can afford; besides, the soyle itselfe fit to yeeld all kinde of fruit that shall be committed thereunto. And lastly, the heavens most mild and temperate, though somewhat more moist than the parts towards the east."—*Spenser*.

Where, then, shall we seek for the causes of the poverty and barbarism that afflict this land? How shall we be able to account for the fact, that commerce and civilization, which have, from the earliest ages, journeyed westward, and in their course have even stayed to enrich the marshes of the Adriatic and the fens of Holland, should have passed over, in their rapid flight to the New World, a spot more calculated by nature than almost any besides, to be the seat of a great internal and external trade?

We do not profess to be able to disclose all the precise causes of the depressed fate of Ireland; still less do we pretend to offer a panacea for all the ills that afflict her. Our object in introducing the subject here is, to shew the absurdity and injustice of that policy which leads us to seek amongst other nations for objects of compassion and care, and to neglect the urgent demands that are made upon us at our very door.

The strongest ground of grievance that we have ever heard alleged against us by intelligent Irishmen, unimbued with party feelings, is the total neglect and ignorance of their country that prevail amongst the people of England. To the middle classes of this country, as to an impartial tribunal, untainted by the venom of their political and religious factions, a large portion of the Irish people look for the probable regeneration of their unhappy country. Without this tardy effort of justice at our hands, they will never be able to escape from the vortex of their social distractions. This patriotic party, including so much of the intelligence and industry of Ireland,

claim from their fellow-subjects on this side of the Channel, (and they have a right to claim it,) such a consideration of their country, its population and resources, its history, institutions, and geography—in fact, just such a study of Ireland as shall give them a knowledge of its anomalous physical and moral state.

It is almost incredible how little is known of this, one of the largest both in area and population of the four divisions of the kingdom. Let any one of our readers take a person of average intelligence, and ask him which is the finest river in the United Kingdom: he will answer, probably, the Thames, the Humber, or the Severn; it is ten to one against his naming the Shannon.

We will venture to say that there are as many individuals in England conversant with the city of New York and the course of the Hudson, as there are who are acquainted with the topography of Limerick, and the banks of the largest river in the British empire.

The past fate of Ireland, like the present condition of its people, presents to our view an anomaly that has no parallel in the history of nations. During all that period of time which has sufficed to enable the other states in Europe to emerge from barbarism—some to attain their zenith of glory and again decay, others to continue at the summit of prosperity—Ireland has never enjoyed one age of perfect security or peace. She has, consequently, unlike every other nation, no era of literature, commerce, or the arts to boast of; nay, she does not exhibit, in her annals, an

instance in which she has put forth in war a combined force to merit even the savage honours of military or naval fame.

Poets have feigned a golden age for this, as for every other country; but it never existed, except in the pages of romance. Ireland never was, at any known period of her history, more tranquil or happy than at this day. She has, from the first, been the incessant prey of discord, bloodshed, and famine.

We, who are fond of digging deep into the foundations of causes, incline to assign, as one reason of the adverse condition of this island, the circumstance of the Romans never having colonized it. That people, by deposing the petty chiefs, and gathering and compressing their septs into one communion—by inoculating the natives with a love of discipline—by depositing amongst them the seeds of the arts, and imparting a taste for civilization—would, probably, have given to them that unity and consistency, as one people, the want of which has been the principal source of all their weakness and misfortune. Had the Romans occupied for three centuries such a country as this, they would perhaps have left it, on their departure from Britain, more advanced, in all respects, than it proved to be in the sixteenth century.

But whatever were the causes of the early degradation of this country, there can be no doubt that England has, during the last two centuries, by discouraging the commerce of Ireland—thus striking at the very root of civilization—rendered herself responsible for much of the barbarism that at the present day afflicts it.

However much the conduct of England towards the sister island, in this particular, may have been dwelt upon for party purposes, it is so bad as scarcely to admit of exaggeration.

The first restrictions put upon the Irish trade, were in the reign of Charles II. ; and from that time, down to the era when the United Volunteers of Ireland stepped forward to rescue their country from its oppressors, (the only incident, by the way, in the chronicles of Ireland, deserving the name of a really national effort,) our policy was directed, incessantly, to the destruction of the foreign trade of that country. Every attempt at manufacturing industry, with one exception, was likewise mercilessly nipped in the bud. Her natural capabilities might, for example, have led the people to the making of glass : it was enacted, that no glass should be allowed to be exported from Ireland, and its importation, except from England, was also prohibited. Her soil, calculated for the pasturing of sheep, would have yielded wool equal to the best English qualities ; an absolute prohibition was laid on its exportation, and King William, in addressing the British Parliament, declared, that he would “do everything in his power to discourage the woollen manufacture of Ireland.” Down to the year 1779, we find that the export of woollen goods from that island remained wholly interdicted.

Not only was her commerce with the different ports of Europe fettered by the imposition of restrictions upon every valuable product that could interfere with the prosperity of England ; not only was all trade

with Asia and the east of Europe excluded by the charters which were granted to the companies of London; but her ports were actually sealed against the trade of the American colonies. Although Ireland presented to the ships of North America, the nearest and the noblest havens in Europe, and appeared to be the natural landing-place for the products of the New World, her people were deprived of all benefit—nay, they were actually made to suffer loss and inconvenience from their favoured position; laws were passed, prohibiting the importation of American commodities into Ireland, without first landing them in some port of England or Wales, whilst the export of Irish products to the colonies, excepting through some British port, was also interdicted.

If we add to this, that a law was enacted, preventing beef or live cattle from being exported to England, some idea may be formed of the commercial policy of this country towards Ireland—a policy, savouring more of the mean and sordid tyranny of the individual huckster over his poorer rival, than of any nobler oppression that is wont to characterise the acts of victorious nations.

Need we wonder that, at this moment, the entire foreign commerce of Ireland does not much exceed the trade of one second-rate port of Scotland?*

There are those who think the Irish genius is unsuited to that eager and persevering pursuit of business which distinguishes the English people; and they argue that, but for this, the natives of a region

* Dundee.

in all respects so favourable to commerce, must have triumphed over the obstacles that clogged their industry.

There is, we believe, one cause existing, less connected with the injustice of England, and to which we are about to allude, why Ireland is below us, and other Protestant nations, in the scale of civilization; yet, if we look to the prosperity of her staple manufacture—the only industry that was tolerated by the government of this country—it warrants the presumption, that, under similar favouring circumstances, her woollens, or, indeed, her cottons, might, equally with her linens, have survived a competition with the fabrics of Great Britain.

But there exists, apart from all intolerant or party feelings on the question, a cause, and we believe a primary one, of the retrograde position, as compared with England and Scotland, in which we find Ireland at the present day, in the circumstance of the Roman Catholic religion being the faith of its people. Let us not be misunderstood—our business does not lie in polemics, and far be it from us to presume to decide which mode of worship may be most acceptable to the great Author of our being. We wish to speak only of the tendency, which, judging from facts that are before us, this church has to retard the *secular* prosperity of nations.

Probably there is no country in which the effects of the Catholic and Reformed religions upon the temporal career of communities may be more fairly tested than in Switzerland. Of twenty-two cantons, ten are, in the majority of the population, Catholic;

eight, Protestant ; and the remaining four are mixed, in nearly equal proportions of Protestants and Catholics. Those cantons in which the Catholic faith prevails are wholly pastoral in their pursuits, possessing no commerce or manufacturing industry, beyond the rude products of domestic labour. Of the mixed cantons, three* are engaged in the manufacture of cotton ; and it is a remarkable feature in the industry of these, that the Catholic portion of their population is wholly addicted to agricultural, and the Protestant section to commercial pursuits. All the eight Protestant cantons are, more or less, engaged in manufactures.

Nor must we omit to add, which every traveller in Switzerland will have seen, that, in the education of the people, the cleanliness of the towns, the commodiousness of the inns, and the quality of the roads, the Protestant cantons possess a great superiority over their Catholic neighbours—whilst such is the difference in the value of land, that an estate in Friburg, a Catholic canton, possessing a richer soil than that of Berne, from which it is divided only by a rivulet, is worth one-third less than the same extent of property in the latter Protestant district.

Such are the circumstances, as we find them in comparing one portion of the Swiss territory with another. The facts are still more striking if we view them in relation to the States immediately around them.

Switzerland, being an inland district, far removed from the sea, is compelled to resort to Havre, Genoa,

* Appenzell, St. Gall, and Aargau.

or Frankfort, for the supply of the raw materials of her industry; which are transported by land three, four, or five hundred miles, *through Catholic states*, for the purpose of fabrication; and the goods are afterwards reconveyed to the same ports for exportation to America or the Levant; where, notwithstanding this heavy expense of transit, and although Switzerland possesses no mineral advantages, they sustain a prosperous competition with their more favoured, but less industrious neighbours and rivals.

If we refer to France, we shall find that a large depôt of manufacturing industry has been formed upon the extreme inland frontier of her territory on the Rhine, where her best cottons are fabricated and printed, and conveyed to the metropolis, about three hundred miles off, for sale. Alsace, the Protestant district we allude to, contains no local advantages, no iron or coals; it is upwards of four hundred miles distant from the port through which the raw materials of its manufactures are obtained, and from whence they are conveyed, entirely by land, passing through Paris, to which city the goods are destined to be again returned. Thus are these commodities transported, over-land, more than seven hundred miles, for no other assignable reason, except that they may be subjected to the labour of Protestant hands.

Germany gives us additional facts to the same purport. If we divide this empire into north and south, we shall find the former, containing Prussia, Saxony, &c., to be chiefly Protestant, and to comprise nearly all the manufacturing and commercial interests of the country; whilst the latter are princi-

pally Catholic, and almost wholly addicted to agriculture. Education, likewise, follows the same law here as in Switzerland; for, whilst the Catholics amount to about twenty millions, and possess but five universities, the Protestants support thirteen, with only a population of fourteen millions.

If we turn to Catholic Italy, where there is very little manufacturing of any kind, we yet find that the commerce of the country is principally in the hands of foreigners. The merchants of Genoa, Naples, Trieste, &c., are chiefly British, Swiss, or Germans, whose houses, again, have their own agents in the principal interior cities; so that the trade of the Italian States is in great part transacted by Protestants. We need scarcely add to these statements the fact, which all are acquainted with, that, in Ireland, the staple manufacture is almost wholly confined to the Protestant province.

We shall probably be reminded of the former commercial grandeur of Spain and the Italian republics. This was, however, to a great extent, the effect of monopolies, which must, from their nature, be of transient benefit to nations; and, moreover, they flourished prior to the complete triumph of the Reformation; and our object is merely to exhibit a comparison between Protestant and Catholic communities of the same period. Besides, Spain and Italy have left no evidences of the enlightened industry of their people; such as are to be seen, for example, to attest the energy of the Dutch, in the canals and dykes of Holland.

We have thus briefly glanced at the comparative

conditions of the Catholic and Protestant interests in Europe ; and, disclaiming, as we do, any theological purpose, we trust we may demand for our argument, what is not often accorded to this invidious topic, the candid attention of our readers. The above facts, then, go far to prove that, in human affairs at least, the Reformed faith conduces more than Catholicism to the prosperity of nations.

We shall not argue that the temporal welfare of states, any more than of individuals, affords proofs of spiritual superiority ; we will admit that it does not : but, if it can be proved from facts, (as we think even our intelligent and ingenuous Roman Catholic readers will agree we have done,) that the Protestant is, more than the Catholic faith, conducive to the growth of national riches and intelligence, then there must be acknowledged to exist a cause, independent of misgovernment, for the present state of Ireland, as compared with that of Great Britain, for which England cannot be held altogether responsible.

The deficient education of a people is, no doubt, a circumstance that must tend, in these days, when the physical sciences and the arts are so intimately blended with manufacturing industry, and when commerce itself has become a branch of philosophy, to keep them in the rear rank of civilized nations ; but we think the abhorrence of change that characterises Catholic states, and which we shall find not merely to affect religious observances, but to pervade all the habits of social life, has even a more powerful influence over their destinies.

In proof of this, if we take the pages of Cervantes

and Le Sage, and compare the portraits and scenes they have depicted, with the characters, costumes, and customs of the present day, we shall find that the Spanish people are, after the lapse of so many ages, in even the minutest observances, wholly unchanged. On the other hand, if we look into Shakspeare, or examine the canvass of Teniers, we shall find that, during the same interval of time, the populations of Holland and England have been revolutionized in all the modes of life, so as scarcely to leave one national feature of those ages for recognition in our day.

Ireland has clung tenaciously to her characteristics of ancient days.

“There is a great use among the Irish,” says Spenser, writing more than two hundred years ago, “to make great assemblies together upon a rath or hill, there to parley, as they say, about matters and wrongs between township and township, or one private person and another.”—Vol. viii. p. 399. Now, no person could, by possibility, pass six months in the south of Ireland, during the present year, but he would be certain to witness some gatherings of this nature. But who, that has travelled in that island, can have failed to be struck with that universal feature in the dress of the people—the greatcoat? “He maketh his mantle,” says Spenser, speaking of the Irish peasant of his time, “his house; and under it covereth himself from the wrath of heaven, from the offence of the earth, and from the sight of men. When it raineth it is his pent-house; when it bloweth, it is his tent; when it freezeth, it is his tabernacle. In summer, he can wear it loose; in winter, he can

wrap it close; at all times, he can use it; never heavy, never cumbersome.”—P. 367. We have ourselves seen the Irish of our own day, in the midst of winter, wrapping the mantle close, and we have seen them spreading it loosely in summer; we have seen the peasant, whilst at plough, obliged to quit one of the stilts every minute for the purpose of adjusting the greatcoat that was tucked clumsily round his loins; and we have beheld the labourer at work, with his mantle thrown inconveniently over his arms and shoulders; but we never witnessed it thrown aside. In truth, it is still the mantle that “hides him from the sight of men;” for, like charity, it cloaks a multitude of defects in the garments beneath.

But it is not in mere externals that we shall find the character of Irish society unchanged. In the manifestations of the passions, in the vehement displays of natural feeling, there is, amidst the general amelioration of the surrounding world, alas! no improvement here. To quote again from the pages of Spenser, an eye-witness:—“I saw an old woman, which was his foster-mother, take up his head, whilst he was quartered, and sucked up all the bloode that runne thereoute, saying, that the earthe was not worthy to drinke it; and, therewith, also steeped her face and breast, and tore her hair, crying out and shrieking most terribly.”—*Ibid.* p. 381.

Let us compare the above scene, which was enacted at the execution of one of the turbulent natives of the sixteenth century, with the following incident that occurred at the late Rathcormac tithe tragedy:—

“I went up to inspect the haggart where the car-

nage occurred, and so awful a spectacle I never witnessed ; the straw, all saturated with human gore, so that blood oozed through on the pressure of the foot ; and, shocking to relate, the widow Collins was seen to kiss the blood of her sons, imprecating God's vengeance on the murderers of her children."—*Dub. Ev. Post*, Dec. 23, 1834.

Who would imagine that more than two centuries have elapsed between the dates when these parallel occurrences took place in one and the same country ?

Viewing, as we confessedly do, the Roman Catholic religion to be a great operating cause against the amelioration of the state of Ireland, it becomes an interesting question, how it happens that we find its dogmas to be professed with so much zeal at the present day in that country. How does it arise, that whereas, during the last three centuries, history exhibits nation after nation yielding up its religion to those reforms which time had rendered necessary, until nearly the whole of northern and western Europe has become Protestant—Ireland, notwithstanding so much contiguous change, still clings, with greater devotion than ever, to the shattered tiara of Rome ? That such is the case, is proved by the evidence of a trustworthy author, whose recent travels in Ireland we shall have occasion to allude to.*

We fervently believe that persecution—perhaps

* "In no country is there more bigotry and superstition among the lower orders, or more blind obedience to the priesthood ; in no country is there so much intolerance and zeal among the ministers of religion. I do believe, that at this moment Catholic Ireland is more rife for the re-establishment of the Inquisition

honestly devised, but still persecution—has done for this church what, under the circumstances, nothing besides could have achieved : it has enabled it to resist, not only unscathed, but actually with augmented power, the shocks of a free press, and the liberalizing influence of the freest constitutional government in Europe.

We shall be told that the epithet persecution no longer applies, since all civil disabilities are removed from our Catholic fellow-subjects ; but, we ask, does it not still apply as much in principle, though not in degree, to the present condition of the Irish Church—where six millions of Catholics are forced to see the whole tithe of their soil possessed by the clergy of one million of Protestants—as it did to the persecutions of the ancient martyrs, or the auto-da-fes of modern Spain ? Is not the spirit of persecution the same, but modified to meet the spirit of the age ?

If we would bring this case home to our own feelings, let us suppose that the arms of the United States of America were to achieve the conquest of Great Britain ; we will further suppose that that country possessed an established church, differing in faith and doctrine from our own—for instance, let it be imagined to be of the Unitarian creed. Now, then, we put it to the feelings of our countrymen, would they, or would they not, regard it as persecution, if they saw

than any other country in Europe.”—*Inglis' Travels in Ireland*. See the same traveller's description of Patrick's Purgatory, Loch Dergh. It adds weight to the testimony of this writer upon such a subject, when it is recollected that he is the author of “*Travels in Spain*.”

the whole of the tithes of England diverted from their present uses, to be applied to the support of a faith which they abhorred? Would it not be felt as persecution to be compelled, not only to behold their cathedrals and churches in the hands of the ministers of a (by them) detested creed, but the lands and revenues which appertain to them, wrested from their present purposes, by the force of a government on the other side of the ocean? And, seeing these things, would it not be felt and suffered as persecution, if the people of England, still clinging to a man to their national church, were impelled by conscience to erect other temples of worship, and out of their own pockets to maintain their ejected and despised ministers?

But, to come to the still more important question, we appeal to the breasts of our readers, would they, under such circumstances, be likely to become converts to the religion of their spoilers and oppressors; or, would they not, more probably, nourish such a spirit of resentment and indignation as would render impossible a calm or impartial examination of its dogmas? And would not their children and their children's children be taught to abhor, even before they could understand, the very name of Unitarianism? But, pursuing our hypothesis, supposing all this to occur in England, and that the nation were compelled, by the presence of a sufficient army, to submit—what would the probable effects of such a state of things be upon the peace and prosperity of the community? However excellent might be the laws and institutions, however liberal and enlightened

the policy, in other respects, of the government set over us by the Americans, whatever commercial advantages might be derived from a complete incorporation with the United States—would the people, the church-loving people of those realms be found to be quietly and successfully pursuing their worldly callings, forgetting the grievances of their consciences? We hope not! For the honour of our countrymen we fervently believe that all worldly pursuits and interests would be, by them, and their sons, and their sons' sons, even down to the tenth generation, abandoned; that agitation would be rife in the land, and that every county in England would put forth its O'Connell, wielding the terrible energies of combined freemen, until the time that saw such monstrous tyranny abated!

Persecution may be, as it often has been, the buttress of error; but all history proves that it can never aid the cause of truth.

What has preserved the Jews a distinct people, scattered as they have been amidst all the nations of the earth? No miracle, certainly; for they are now dissolving into the ranks of Christians before the sun of American toleration;* and our country, but especially the spot where we write, gives us a similar beneficent example in comparison with other states. Nothing more than the universal and unintermitted series of oppressions that characterised the conduct of

* In the United States a Jew can hold all offices of state; he may by law become the Chancellor of the Exchequer, Chief Justice, or even President. An American naval commander of the Hebrew faith, was, upon one occasion, introduced to George IV.

every government towards that despised people, from the destruction of Jerusalem down to the last century, can be necessary to account for the fact, that the Hebrew people exceed, perhaps, at this moment, in numbers, the population of Judæa, at the most flourishing period of its history. Nor, if it were desired, during the eighteen centuries to come, to preserve the Jews a separate people, could the wit or the philosophy of man devise a scheme to prevent their amalgamating with the nations of the earth, other than by persevering in the same infallible course of persecution.

Let them search the annals of religious persecution (and it is the most humiliating chapter in the history of poor human nature), and we will challenge the advocates of coercive dealings in matters of conscience, to produce an instance where violence, bribery, or secular power in any form, has ever aided the cause of true religion. To the honour of the immaterial portion of our being, although the body may be made to yield to these influences, the soul, disdaining all mortal fetters, owns no allegiance but to itself and its Maker.

So long, then, as the Church of England possesses the whole of the religious revenue of Ireland, there cannot be—nay, judging of the case as our own, there ought not to be—peace or prosperity for its people; and, what is of still more vital importance, there can be, judging by the same rule, no chance of the dissemination of religious truth in that country.

Let us not be met by those unthinking persons who view tithes as religion, with the cry about the destruc-

tion of the Protestant church. We are of that church ; and we reckon it amongst the happiest circumstances of our destiny that Providence has placed us in a Protestant land. In our opinion—and we have endeavoured to prove it from the homely but incontrovertible arguments of facts—no greater temporal misfortune can attach to a people of the present age than to profess the Roman Catholic religion : and it is in order to give the Irish an opportunity of considering with that *indifferency* which we believe with Locke is the indispensable prelude to the successful search after truth, the doctrines of our reformed faith, that we would do them the justice, in the first place, of putting them on a perfectly equal footing, as respects matters of conscience, with their Protestant fellow-subjects.

We are not visionary enough to shut our eyes to the vast impediments in the way of such a consummation as we have jumped to. These, however, do not in the least affect the question, as to its justice or expediency. The obstacles lie in the House of Peers, and probably in the breast of the King. If the conscience of the latter should be affected with scruples as to the binding nature of the coronation oath, precautions might be taken to prevent a similar future obstacle on the demise of the crown. With respect to the House of Lords, difficulties of a less august nature will have to be encountered ; for why should the fact be concealed, that the church question, in whichever way agitated, is one that concerns the *interests* of the aristocracy. Hence is the difficulty : that, whereas, we sincerely believe, if a canvass were

made from house to house throughout Great Britain, four-fifths of the middle classes of its people would be found at once not interested in the temporalities of the Irish Church, and willing to grant to their Catholic fellow-subjects of Ireland, a complete equality of religious privileges; on the contrary, if an appeal were to be made to the votes of the House of Peers, four-fifths of that assembly would very likely oppose such a measure of justice and peace; and probably that great majority of its members would be found to be, immediately or remotely, interested in the revenues of that church.

We would recommend the most ample concessions to be made to countervail the obstacles of self-interest. There is no present sacrifice of a pecuniary nature that will not be an ultimate gain to the middle and working classes of England, if it only tend to pacify and regenerate Ireland.

Viewing the subject as a question of pounds, shillings, and pence (and it partakes a great deal more of that character than folks are aware of), the people of England would be gainers by charging the whole amount of the church revenue of Ireland to the consolidated fund, if, by so doing, they were only to escape the expense of supporting an enormous army* for the service of that country.

* STATIONS OF THE BRITISH ARMY IN IRELAND, ON THE
1ST NOVEMBER, 1834.

4th dragoon guards, Cork.	52nd, Enniskillen.
7th do. Limerick.	56th, Cork.*

But we are, from another motive of self-interest, far more deeply concerned in the tranquillity and improvement of the sister kingdom: for it ought to be borne in view, and impressed upon the minds of the industrious classes of this country, that, unless we can succeed in laying the foundations of some plan for elevating the people of Ireland to an equality with us, they will inevitably depress us to a level with themselves. *There cannot permanently be, in a free community, two distinct castes or conditions of existence, such as are now to be found in this united empire.*

Here is an array of bayonets that renders it difficult to believe that Ireland is other than a recently conquered territory, throughout which an enemy's army has just distributed its encampments. Four times as many soldiers as comprise the standing army of the United States, are at this time quartered in Ireland!

Already is the process of assimilation going on; and the town in which we write furnishes, amongst others, a striking example of the way in which the contagion of Irish habits is contaminating, whilst the competition of that people is depressing, the working classes of Britain.

Manchester is supposed to contain fifty thousand Irish, or the immediate descendants of Irish. The quarter in which they congregate is, like the district of St. Giles' of London, a nursery of all the customs that belong to savage life. In the very centre of our otherwise civilized and wealthy town, a colony which has acquired for its *locale* the title of Little Ireland, exhibits all the filth, depravity, and barbarism that disgrace its patronymic land. Nor is the evil confined within such limits. Its influences are felt in the adulteration of character, and the lowering of the standard of living of our artisans generally: it is a moral cancer, that, in spite of the efforts of science or philanthropy to arrest its progress, continues to spread throughout the entire mass of our labouring population.

No part of England or Scotland is exempt from its share in the natural consequences of this terrible state of degradation to which the people of Ireland are reduced. There is not a village or parish of the kingdom into which its famine-impelled natives do not, at certain periods of the year, penetrate to share the scanty wages of our peasantry; thus dragging them down to their own level, and, in return, imparting to them the sad secrets of their own depraved modes of life.

But great as this evil has hitherto been, it is only a subject of astonishment to us, that the immigration of the Irish people into this portion of the empire has not been more extensive: sure we are, from the accounts we have of the present state of the southern portion of that island, that nothing short of Berkley's wall of brass can, for the future, save us from an overwhelming influx of its natives.

Let those who are incredulous of our opinion, consult the recent work on Ireland, from which we are about to offer an extract or two for the perusal of our readers.

We look upon every writer who directs the attention of the people of England to the *facts* connected with the present state of Ireland, as a benefactor of his country. Even should an author, for the sake of being read, or for party purposes, like Cobbett, throw some exaggeration into his pictures of the horrors of this land, we still view him in the useful capacity of a watchman, sounding the alarm of danger, scarcely too loud, to the indifferent minds of Great Britain. Though, like the hydro-oxygen microscope, when applied to physical objects, his descriptions magnify its social monsters, till their magnitude terrifies the beholder—still the monsters are there: they are only enlarged, and not created. In the purer elements of English society, such evils could not, through whatever exaggerating medium, be discovered.

But the traveller from whom we are about to quote, gives intrinsic evidences of not only competent intelligence, but strict impartiality, and a sincere love of truth. We do not think that he possesses, in an

eminent degree, the organ of causality, as the phrenologists call it; for he attributes, as the ultimate cause of the miseries of Ireland, the want of employment for its people; not recollecting that this evil must have its cause: but in the qualities of a careful and experienced observer of facts, he is, unquestionably, a competent authority.

These are his words, in speaking of the remuneration of labour in Ireland:—"I am quite confident, that, if the whole yearly earnings of the labourers of Ireland were divided by the whole number of labourers, the result would be under this sum—fourpence a-day for the labourers of Ireland."

Again, in speaking of the habitations of the peasantry of Ireland, the following is the description given by the same author:—"The only difference between the best and the worst of the mud cabins is, that some are water-tight, and some are not: airtight, I saw none; with windows, scarcely any; with chimneys—that is, with a hole in the roof for the smoke to escape through—as many perhaps with it as without it. As for furniture, there is no such thing; unless a broken stool or two, and an iron pot, can be called furniture. I should say that, in the greater part of Leinster and Munster, and in the flat districts of Connaught, bedsteads are far from general, and bed-clothing is never sufficient."

Let us reflect for a moment on what would be the effects upon the condition of our industrious population, if they were brought down to share one common average with these labourers; a fate which, we repeat, they are doomed to suffer, unless, by imparting peace

and prosperity to Ireland, we shall succeed in elevating her people to our own level.

This intelligent traveller sums up his recital of all that he witnessed during a tour of many months throughout the island, (great part of which time he spent in unrestrained intercourse with the peasantry,) in these words, which, along with every other portion of his volumes, do equal honour to his moral courage and philanthropy:—

“I, Henry David Inglis, acting under no superior orders; holding no government commission; with no end to serve, and no party to please; hoping for no patronage, and fearing no censure; and with no other view than the establishment of truth—having just completed a journey throughout Ireland, and having minutely examined, and inquired into the condition of the people of that country—do humbly report, that the destitute, infirm, and aged, form a large body of the population of the cities, towns and villages of Ireland: that, in the judgment of those best qualified to know the truth, three-fourth parts of their number die through the effects of destitution, either by the decay of nature accelerated, or through disease induced by scanty and unwholesome food, or else by the attacks of epidemics, rendered more fatal from the same causes: that the present condition of this large class is shocking for humanity to contemplate, and beyond the efforts of private beneficence to relieve, and is a reproach to any civilized and Christian country.”

A Christian country, does he say? Posterity will doubt it! There is no such picture as this of a per-

manent state of national existence to be found in any authentic history, ancient or modern, Christian or Pagan. We shall search the volumes of the most accredited travellers in Russia,* Turkey,† or India, and find no description of a people that is not enviable, in comparison with the state of millions of our fellow-subjects in Ireland. The natives of Moldavia and Wallachia, which provinces have been the battlefield for Turks and Christians for centuries, are now living in happiness and plenty, when compared with the fate of the inhabitants of a country that has known no other invader but England.

We lavish our sympathies upon the serfs of Poland, and the slaves of Turkey; but who would not prefer to be one of these, to the perishing with hunger under the name of freeman? We send forth our missionaries to convert the heathen; but well might the followers of Mahomet or Zoroaster instruct us in the ways of charity to our poor Christian brethren!

Far be it from us to say, with a celebrated French

* Dr. Clarke tells us that the serfs of Russia, when old, are, of right, supported by the owners of the estate.

† In the Koran, the charities are enjoined: and Tournefort tells us — “There are no beggars to be seen in Turkey, because they take care to prevent the unfortunate from falling into such necessities. They visit the prisons to discharge those who are arrested for debt; they are very careful to relieve persons who are bashfully ashamed of their poverty. How many families may one find who have been ruined by fires, and are restored by charities! They need only present themselves at the doors of the mosques. They also go to their houses to comfort the afflicted. The diseased, and they who have the pestilence, are succoured by their neighbour’s purse.”—*Vol. ii. p. 59.* The Bible still more strictly commands charity, and—see *Ingis’ Ireland!*

writer, that we distrust the philanthropy of all those who seek in distant regions for objects of their charity; but we put it to our countrymen, whether, in lending themselves to any scheme, having benevolence for remote nations in view, whilst such a case as this stands appealing at their doors, they are not, in the emphatic words of Scripture, "taking the children's meat and casting it to the dogs."

We shall be told that the hundreds of thousands of pounds that are sent annually to remote regions are for the promotion of religion. But there cannot be religion where there is not morality; and can morals survive in a starving community such as exists in Ireland? No! and therefore we say, until the above proclamation of her desperate sufferings be controverted, (and who will gainsay it?) a copy of it ought to be affixed to every public building, and to the doors of every church and chapel in particular of England; and all attempts, of whatever description, to subsidize the charity of this country, in behalf of alien nations, whilst this member of our own family, in the extremity of want, supplicates for succour at our hands, should be denounced and put aside by the common sense and humanity of the nation.

If not, if for more fanciful, because more distant, projects of benevolence, we neglect our obvious duty towards these our fellow-countrymen, then will the sins and omissions of their fathers be visited upon the future generations of Englishmen; for assuredly will the accumulated ills of Ireland recoil upon their heads, until one common measure of suffering shall have been meted out to both!

But we will not forget that our object in entering upon the consideration of this subject, was to illustrate the impolicy and injustice of the statesmen of this country, who have averted their faces from this diseased member of our body-politic; and, at the same time, have led us, thus maimed, into the midst of every conflict that has occurred upon the whole continent of Europe. To give one example, let us only recur to the year 1823, when the French invasion of Spain drew forth those well-known powerful appeals of Brougham * to the ever-ready-primed

* In alluding to this eminent, and we fervently believe disinterestedly patriotic individual, we have no wish to be thought to have caught the contagion of that virulence with which, perhaps from the unworthiest of motives, his character has been latterly assailed. We feel no very great respect for mere eloquence, which, from the time of Demosthenes down to that of the subject of these remarks, has, probably, as often been sacrificed at the altar of falsehood as upon the purer shrine of truth. But Lord Brougham's labours in behalf of popular intelligence, at a time too, be it always remembered, when the cause of education was not, as now, fashionable, places his fame on a monument that is based securely upon the broad and durable interests of the people.

At the very instant of penning this note, we have seen the report of a speech made by Lord Brougham in the House of Lords upon the subject of foreign politics, from which we subjoin an extract, illustrating how little the judgment of this nobleman has profited by the interval since 1823, upon a question on which, unluckily for England, her statesmen have, one and all, been alike infatuated:—"With regard to the change of the sovereign in Austria, he could not avoid expressing his hope, that His Majesty's Government would seize upon the opportunity offered, by the change in the reigning sovereign there, and enforce, what *he knew their predecessors had tried to enforce (!)* the humane, and in his conscience he believed the sound, prudent, and politic

pugnacity of his countrymen, in which he exhausted his eloquence in the cause of war against France; declaring, amongst similar flights, that we ought to spend our last shilling in behalf of Spanish independence; whilst, at the very same moment of time, famine, pestilence, and insurrection were raging, even to an unparalleled extent, in Ireland, whose natives were driven to subsist on the weeds of the fields, and for whom a subscription fund, amounting to more

course, as regarded the individual interest of the Austrian government, imposed upon the government of his Imperial Majesty, to mitigate the rigours, if not to terminate the sufferings, that, for nearly the whole of the last seventeen years, had been inflicted upon some of the ablest, most accomplished, virtuous, and enlightened individuals, the ornaments of the nobility of a part of his Imperial Majesty's dominions. He hoped that an occasion would be taken of enforcing this subject on the attention of the Austrian government, in a manner that became the character, the policy, and the *wisdom* (!) of this country; for he was convinced," &c. &c.—*Morning Chronicle Report, March 11th, 1835.*

The circumstances under which the above was uttered were even still more inopportune than those we alluded to of 1823.

Under the same roof—at the very same instant of time in which an interference with the domestic concerns of a capital nearly a thousand miles distant, and with which we have scarcely more interested connection than with Timbuctoo, was thus invoked—a debate was proceeding in the House of Commons (the malt question), in which it was stated by several speakers, that three-fourths of the population of this kingdom are plunged in distress and poverty; and, in the course of which, the Chancellor of the Exchequer declared that he possessed not the power of alleviating such misery; whilst such was the extremity to which this minister of the crown was driven, that he felt impelled to appeal to the honesty of a British Parliament in behalf of the national creditor.

than a quarter of a million, was that very year raised by the people of Great Britain.

Subsequently, as our readers know, our Government dispatched an armament to the succour of Portugal. We witnessed the departure of those troops from London, and well do we remember the enthusiasm of the good citizens on that occasion. In the next meeting of Parliament, it was stated that this display of our power and magnanimity towards an old ally cost upwards of a million sterling. Here was a sum that would have sufficed to employ the starving peasantry of Ireland in constructing a rail-road fifty miles in length. What fruits have we to exhibit, in the present state of the Peninsula, that can be said to have grown out of this expenditure?

But the worst effects of an intermeddling policy are, that we are induced, at all times, to maintain an *attitude*, as it is termed, sufficiently formidable, in the face of Europe. Thus, the navy—which after the peace was very properly reduced, so that in 1817 it comprised only 13,000 seamen and 6000 marines—was, under the plea of the disturbed state of Europe, from time to time augmented; until, in 1831, the estimate amounted to 22,000 seamen, and 10,000 marines: whilst the army, which, in 1817, had been cut down to 69,000 men, was, by successive augmentations, raised to 88,000 men in 1831.

Our limits do not allow us to go further into details upon this portion of our task. But we cannot dismiss the subject altogether, without a few observations upon the remedies which are proposed for the present state of Ireland. That “every quack has his

nostrum for the cure of poor Erin," is a common remark with her people; and although we find the doctors, as usual, differ exceedingly in opinion, there are two prescriptions which have been very numerously recommended—we allude to a law against absenteeism, and a poor-law.

We should hail any measure that promised the slightest relief to the wretched people of this country. But it is necessary to ask, Could these plans, through any law, be efficaciously enforced? There is, we think, much raving after impracticable legislation nowadays. Let us see if these be not specimens of it.

We never yet met with a person who professed to understand how an Act of Parliament could be framed, that, without committing the most grievous injustice and cruelty, would be more than a dead letter against Irish absenteeism. Let us imagine that a law was enacted to compel every owner of an estate in Ireland to reside upon his property. Well, this would be imprisonment for life. No, is the answer: he might range over the whole island, and even reside on the sea-coast, or, for a portion of the year, in Dublin. Good: then he must have a passport, and at every move his person must be cognized; and for this purpose a police, similar to the French gendarmerie, must be organized throughout the country. But the traders, the farmers, the professional men, the tourists, the beggars, the commercial travellers, the strangers—all these, we suppose, would be subjected to the like *surveillance*? Oh, no! must be the reply: that would be to obstruct the entire business of the coun-

try. Thus this law falls to the ground, since the landowner might elude it under any of these disguises.

But to approach the subject in another way. The enactment would not, of course, be passed without some clauses of exceptions. It would be barbarous, for example, to prohibit a man from changing his abode, if illness demanded it, or if his wife or children were in that extremity. What, then, would be the market price of a doctor's certificate, to transport a *malade imaginaire* to France or Italy? Again, if a Milesian landlord pined for a trip to London, would not a subpoena to attend some law process be a favourite resource? Or a friend might summon him before a parliamentary committee, or find him comfortable apartments in the rules of the Fleet. Fictitious conveyances, nominal divisions of property, and a thousand other expedients, might be named, for rendering nugatory this law, each one of which would, to a reasonable mind, prove the impracticability of such a measure.

Let those who think that a poor's-rate, sufficient to operate as a relief to the pauper population, could be levied in the south of Ireland, peruse Inglis' description of the present state of the province of Connaught. How would the rate be agreed upon, when no one of the wretched farmers would come forward to fix the amount? Or, if they did agree to a levy, who would be bold enough to collect the rate? Who would distribute it, where all are needy of its assistance? But, for the sake of contemplating the probable effects of such a law, let us suppose that these difficulties were

got over. We believe that those who recommend a poor's-law as a remedy for Ireland, are imperfectly acquainted with its desperate condition.

The poor's-rate of England had, two years ago, in various districts, reached fourteen shillings in the pound; and, in one instance, it absorbed the entire rental of the land; and this occurred in Buckinghamshire, within fifty miles of London, and where there are rich farmers and landowners.

What, then, would be the effects of any poor-law in a country where parish after parish, throughout vast districts, contains not an inhabitant who tastes better food than potatoes, or knows the luxury of shoes and stockings, or other shelter than a mud cabin? We dread to contemplate the results which, in our judgment, would follow such an attempt to ameliorate the lot of this population. As soon as a competent provision for the poor were ordered — such as a Christian legislature must assign, if it touch the subject at all — the starving peasantry of Ireland, diverted from their present desperate resources of emigration or partial employment in towns, would press upon the occupiers of the soil for subsistence, with such overwhelming claims as to absorb the whole rental in less than six months. What must follow, but that every person owning a head of cattle or a piece of furniture, would fly to the cities; leaving the land to become a scramble to the pauper population, which, in turn, abandoned to its own passions, and restrained by no laws or government, would probably divide itself once more into septs, under separate chieftains, (the elements of this savage state are

still in existence in many parts of the south of Ireland,) and commence a war of extermination with each other. The days of the Pale and all its horrors would be again revived: famine would soon, of necessity, ensue; the towns would be assailed by these barbarous and starving clans; and the British Government would once more be called on to quell this state of rapine with the sword.

Such, we conscientiously believe, would be the inevitable consequences of a measure which, to the eye of the uninformed or unreflecting philanthropist, appears to be the most eligible plan for the peace and prosperity of Ireland.

What remedies, then, remain for this suffering country?

We shall pass by the cry for the repeal of the Union; because everybody knows that to have been only used as an engine for the purpose of acquiring a power to coerce England into other acts of justice. A Parliament in Dublin would not remedy the ills of Ireland. That has been tried, and found unsuccessful; for all may learn in her history, that a more corrupt, base, and selfish public body than the domestic legislature of Ireland never existed; and the very first declaration of the United Volunteers, when, in 1781, they took the redress of her thousand wrongs into their own hands, was to the effect, that they resolved to use every effort to extirpate the corruptions that so notoriously existed in the Irish Parliament; and one of the first acts of the same patriotic body, was to invest the Parliament House in Dublin, and, at the point of the bayonet, to extort from those

native legislators a redress of their country's grievances.

To come, next, to the scheme of emigration. All must regard with feelings of suspicion and disfavour any attempt to expatriate a large body of our fellow-countrymen; and we hold such an antidote to be only like removing the slough which has arisen from a wound, whilst the disease itself remains untouched.

But, unhappily, the maladies of Ireland have taken such deep root, that legislation cannot hope, for ages to come, effectually to eradicate them; whilst here is a mode by which hundreds of thousands of our fellow-creatures are eager to be enabled to escape a lingering death. Surely, under such circumstances, this plan, which would leave us room to administer more effectually to the cure of her social disorders, deserves the anxious consideration of our legislature.

Here let us demand why some forty or fifty of our frigates and sloops of war, which are now, at a time of peace, sunning themselves in the Archipelago, or anchoring in friendly ports, or rotting in ordinary in our own harbours, should not be employed, by the Government, in conveying these emigrants to Canada, or some other hospitable destination? The expense of transporting an individual from Limerick to the shores of America, by such a method, would, probably, not exceed two pounds. On arrival, the government agents might, probably, find it necessary to be at the charge of his subsistence for a considerable time—perhaps, not less than twelve months.

Altogether, however, the expense of a project of emigration, on a scale of magnitude, must be enor-

mous. But, again we say, that any present sacrifice, on the part of the people of this country, by which the Irish nation can be lifted from its state of degradation, will prove an eventual gain.

Contemporary with any plan of emigration, other projects for the future amelioration of the fate of that miserable people must be entered upon by the British Parliament; and we should strongly advocate any measure of internal improvement, which, by giving more ready access to the southern portion of the island, would throw open its semi-barbarous region to the curiosity and enterprise of England. Steam navigation has already given a powerful stimulus to the industry of the eastern maritime counties; and if, by means of railroads, the same all-powerful agent could be carried into the centre of the kingdom, there can be no doubt that English capital and civilization would follow in its train. Every one conversant with the subject, is aware how greatly the pacification and prosperity of the Scotch Highlands were promoted by carrying roads into these savage districts; and still more recently, how, by means of the steam navigation of the lakes, and the consequent influx of visitors, the people have been enriched and civilized. Similar effects would doubtless follow, if the facilities of railroad travelling were offered to Ireland, whose scenery, hardly rivalled in Europe, together with the frank and hilarious temperament of its people, could not fail to become popular and attractive with the English traveller.

We will here introduce a scheme to the notice of our readers, which, whilst we gladly acknowledge

with gratitude the source from whence it originated, we think, deserves the notice of our Government.

In the *New York Courier and Enquirer* newspaper of December 24, 1834, appeared a letter headed "Traverse Atlantic," which, after stating that the writer, on a recent visit to Europe, had suffered a delay of ten days in ascending the French Channel, from Finisterre to Havre, and of eight days in descending the Irish Channel, from Liverpool to Cape Clear, says, he "believes that, on an average, one-third or one-fourth of the time is wasted, upon every transatlantic voyage, in getting into, or out of, the European ports now resorted to." The writer then proceeds as follows:—

"The commerce of America chiefly centres in the ports of Hamburgh, Havre, London, and Liverpool. Each of these is distant from the ocean, and difficult of access. On the western coast of Ireland, there are several harbours far superior in every requisite. As, for instance, the island of Valencia, which is the nearest point of land in Europe to America. Between it and the main, reposes an excellent receptacle for shipping of any burden, approached by two easily practicable inlets, completely landlocked, capacious, and safe. Situated immediately on the brim of the Atlantic, a perfectly straight line can be drawn from this harbour to the port of New York, the intervening transit unobstructed by islands, rocks, or shoals. The distance being less than two thousand seven hundred miles, may be traversed by steam in about eight days; and the well-known enterprise of the American merchants, renders it unnecessary for me

to do more than to intimate that they will avail themselves of every opening or inducement that may arise, to establish the first link of intercourse by a line of packet boats. * * * *

“The extent of this undertaking has been stated as beyond the means of those likely to engage in it. This seems to me incredible, when I advert to the facts, that Ireland has a population of eight millions, multitudes of whom are in beggary for want of work, with wages at from fourpence to one shilling a-day, and money, on the average, not worth more than three per cent.; and recollect, at the same time, that the state of South Carolina, one of the smallest in the American confederation, with a population of three hundred thousand, wages at five shillings sterling a-day, and capital at seven per cent. interest, has, unaided, and by private enterprise, constructed a railroad from Charleston to Augusta, one hundred and forty-five miles in extent, at present the longest in the world, which is travelled by locomotive engines in the course of ten hours.

“The advantages to accrue to Ireland in particular by thus opening a regular communication from New York to London in twelve, and to Paris in fifteen days, are incalculable. That island would become, of necessity, the thoroughfare between the two hemispheres; and the occupation of the public mind in such an enterprise, and the constantly increasing fruits of its progress, would do more to pacify the fearful dissensions of the people, and ameliorate their most lamentable condition, than any legislation of even the best disposed Parliament.”

The above project, which, in the affluence of their enterprise, our American friends have suggested for the benefit of Ireland, merits the attention of the landowners and patriots concerned for the welfare of her people.

It has long been decided, by the merchants and nautical men engaged in the intercourse between Liverpool and America, that steam boats* would be found capable of navigating the Atlantic with perfect safety; and the more sanguine amongst those interested in increasing the facilities of communication between the two countries, have gone so far as to predict that, in a dozen years' time, we may hope to witness the arrival and departure of steamers twice a week between England and the United States.

As any scheme of this nature must necessarily require that the vessels should take their departure from the nearest points of approximation of the two hemispheres, Ireland would thus become the starting place for all Europe; and it is scarcely possible to conceive anything that would be more calculated to enrich and civilise that country, than by thus irrigating it, as it were, with the constant tide of emigration to and from America.†

A railway, for the purpose here alluded to, would pass through the centres of Leinster and Munster; intersecting the counties of Kildare, Queen's County,

* In June, 1819, a steamship crossed the Atlantic from Savannah to Liverpool.

† [In 1858, when the Earl of Eglinton was Lord Lieutenant, the first Irish Trans-Atlantic packet station was established at Galway; and in about a year later Cork was made a port of call for the Inman steamships, and subsequently for the Cunard line.]

Tipperary, Kilkenny, Limerick, Cork, and Kerry ; and would pass within twenty miles of the port of Limerick, and thirty miles from that of Cork, to both of which cities, it might reasonably be expected, that branches would be carried by public subscription : thus, not only would these two great commercial havens be connected with Dublin, but by opening a direct communication with each other, it would afford a medium for traffic, by steam, between the fifteen counties that are washed by that noble stream, the Shannon, and the ports of Cork and Bristol ; and, ultimately, by means of the Great Western Railway, with London.

Railroads are already begun for connecting Liverpool with Southampton, by way of Birmingham and London. The French have long been engaged in making surveys for a railway from Havre, by way of Rouen (the Manchester of France) to Paris : and although characteristic delays may arise to retard the completion of this as of other projects of mere usefulness, with that fanciful people ; yet, as it is, perhaps, the only line in all France that would prove a remunerating speculation, there can be no doubt that it will be the first that is undertaken in that country.

Presuming this to be effected, then, by means of such a plan as is here recommended, for constructing a line from Dublin to the extreme point of Munster, a traveller would be enabled to transport himself from the French metropolis, *viâ* Havre, Southampton, London, Liverpool, and Dublin, to Valencia Island, or any other point of embarkation on that coast, in about sixty hours ; and, as the voyage to New York would

be accomplished in about eleven or twelve days, the whole distance from Paris to America, which now, upon an average, occupies forty days, in the passage, would be accomplished, by the agency of steam, in about a third of that time.

That such a project, if completed, would secure the preference of voyagers to all parts of North America, not only from Britain, but from every quarter of Europe, must be apparent; that all we have recommended is perfectly practicable, we have no difficulty in believing: and that a traffic, of such magnitude as is here contemplated, would have the effect of imparting wealth and civilization to the country through which it passed, all experience proves to be unquestionable.

But it is not merely the future benefit that must accrue to Ireland, from the construction of a railroad through her provinces, that we should alone regard. The present support of her unemployed peasantry is another cogent motive for some such undertakings: for, unless a diversion of the surplus labour from the land be effected, through the employment of English capital amongst its population, no change can be attempted in the agricultural economy of Ireland. There is not, absolutely, in the present densely crowded state of her rural inhabitants, elbow-room, so to speak, sufficient for readjusting their position. Yet there are reforms indispensably requisite to the agricultural prosperity of the island. The farming implements of its people are, for example, notoriously inferior, requiring twice the labour, both of men and cattle, of our own; yet, how shall we hope to see any improvements effected in these, by which the demand

for labour shall be temporarily diminished, whilst one half of the peasantry is perishing for want of work?

Again: the farms are so minutely subdivided, to meet the desperate competition of a people who possess no resource but the land to preserve them from famine, that their occupiers are destitute altogether of capital, and aim at no other end but to secure a daily subsistence on potatoes.

Under a better system, the cultivation of flax might be extended almost indefinitely. At present, the estimated value of the annual productions of this raw material of their staple manufacture is about £1,500,000, which is yielded from one hundred thousand acres of land—not one-tenth of the area of a moderate-sized county.* But how can we apply a remedy to these, or the other evils of the soil, amidst a ferocious and lawless community, that visits with fire and sword† the prædial reformer?

We confess we see no hope for the eventual prosperity of this country, except in the employment of a portion of its people, through the instrumentality of English capital, in the pursuit of manufactures or commerce. Of capital they are literally more destitute, in some parts of the west coast of the island, than are the North American Indians on the banks of the Mississippi; as an instance in proof of which, it may be stated that, in a recent Government survey

* [On June 21st, 1864, the Secretary for Ireland stated that in 1854 there were 151,403 acres under flax cultivation; in 1863, 214,063 acres; and in 1864 about 300,000 acres.

† The barbarities committed in Ireland as frequently spring out of feuds arising from the competition after land, as from disputes upon the question of tithes.

of that quarter, a vessel of war was the first to discover some of the finest fishing stations to be found in the British waters; and yet the natives of the neighbouring shores possess not the means of procuring boats or nets, through which to avail themselves of these treasures!

Capital, like water, tends continually to a level; and, if any great and unnatural inequality is found to exist in its distribution over the surface of a community, as is the case in this United Kingdom, the cause must, in all probability, be sought for in the errors or violence of a mistaken legislation. The dominant church, *opposed to the national religion*, is, we conscientiously believe, in this case, the primary existing cause of this discrepancy. Capitalists shrink with all the susceptibility of the barometer in relation to the natural elements, from the storms and tempests of party passion; but how infinitely beyond all other motives must this privileged class be impelled, by the impulses of feeling and taste, to shun that atmosphere where the strife of religious discord rages with a fury unheard of in any other land!* There can-

When, at the commencement of the last century, a commission of the most intelligent merchants of Holland drew up, at the request of the Government, a statement of the causes of the commercial prosperity of that country, they placed the following words first in the list of "moral causes." "Among the moral and political causes are to be placed, The unalterable maxim and fundamental law relating to the free exercise of different religions; and always to consider this toleration and connivance as the most effectual means to draw foreigners from adjacent countries to settle and reside here, and so become instrumental to the peopling of these provinces."

not be prosperity for Ireland, until the law, by equalizing the temporalities of Catholics and Protestants, shall have removed the foundation of this hideous contention.

To this consummation we must be ultimately driven; for nothing short of this will content the people of Ireland, because less would be short of the full measure of justice. We advocate no spoliation: let the vested rights of every individual be respected—especially let no part of the tithes fall to the merciless grasp of the landlords of Ireland, who, with many exceptions, may be regarded as the least deserving body of its people. But let the British Parliament assert the right to the absolute disposal of the Irish Church revenues, excepting in cases of private property; and let an equal government grant be applied to the religious instruction of both faiths, *according to the numbers of each*, as is the rule in France and Belgium* at the present day.

Such a regulation, by preventing Englishmen from holding benefices in Ireland (there would be no longer the temptations of rich livings and sinecures), would lead to a beneficial influence of the Protestant ministers in that country: for what could so much tend to destroy all hope of their proselyting the poor Catholics, what in fact could be so much calculated to make those ministers “despised and rejected,”† as

* At the last sitting of the Belgium Chambers, a sum of £400 was voted towards the support of the English chapel; and a similar amount was granted for the service of the Jewish faith.

† “In planting of religion, thus much is needful to be done—that it be not sought forcibly to be impressed into them with

to send amongst them, as is now the case, and ever has been, strangers, who, whatever may be their worth, (and we believe the Church of England clergy, *as a class*, to be at this moment about the best body of men in Ireland,) are ignorant of the character and habits, nay, even of the very language of the people? What chance have these in competition with the

terror and sharpe penalties, as now is the manner, but rather delivered and intimated with mildnesse and gentlenesse, *so as it may not be hated before it be understood, and their professors despised and rejected*: And therefore it is expedient, that some discrete ministers of their owne countrymen, be first sent over amongst them, which, by their meeke persuasions and instructions, as also by their sober lives and conversations, may draw them first to understand, and afterwards to imbrace the doctrine of their salvation; for if that the auncient godly fathers which first converted them, when they were infidells, to the faith, were able to pull them from idolatry and paganisme to the true beliefe in Christ, as St. Patrick and St. Colomb, how much more easily shall godly teachers bring them to the true understanding of that which they already professed? Wherein is the great wonder to see the oddes that is betweene the zeale of Popish priests and the ministers of the gospell; for they spare not to come out of Spaine, from Rome, and from Remes, by long toyle and dangerous travayling hither, where they know perill of death awayteth them, and no reward or riches is to be found, only to draw the people unto the Church of Rome. Whereas some of our idle ministers, having a way for credite and estimation thereby opened unto them, and having the livings of the country offered unto them, without peines and without perile, will neither for the same nor any love of God nor zeale of religion, nor for all the good they may doe by winning soules to God, bee drawne forth from their warme nestes to look out into God's harvest, which is even ready for the sickle and all the fields yellow long ago; doubtless those good olde godly fathers will (I fear mee) rise up in the day of judgment tthem."—*Spenser*.

Roman Catholic priesthood, who, drawn from the middle or lower ranks of their countrymen, after an appropriate education in Maynooth College, (where are always four or five hundred of such students,) are sent back to, perhaps, their native village, to resume the personal and familiar acquaintance of its inhabitants?

Would the spiritual interests of the Scotch people be consulted by displacing their present excellent native pastors in favour of the younger sons of English noblemen?

If it be objected that the English establishment is involved in the fate of the Church of Ireland, we answer, that the circumstances of the two are of as opposite a complexion as light is to darkness. In England, the national church comprises within its pale a great majority of the people; whilst in Ireland we behold a state religion, upheld for the exclusive benefit of one-seventh of its population. Can we, on the face of the earth, find another example of an established church opposed to the consciences of six-sevenths of its supporters; for although the revenues may not go directly from their pockets, *could the present income of the Protestant church be raised without the Catholic population?*

What should we say if the Government of Austria, Russia, or Turkey (for each of these has a state religion, differing from ours, and from one another, and yet pronounced by the law of the land to be the only true belief), were found to be applying the whole of the religious revenues of its country to the service of the faith of one-seventh of its subjects?

What should we think if the Russian Government were to bestow the entire of the property of the Greek church upon the Catholic or Armenian fraction of its people? In every country we find the established religion in harmony with the consciences of its people; excepting in Ireland, which, in this, as in other respects, presents to us an anomaly which has no resemblance amongst the nations of the world.

In concluding our observations upon this portion of our task, we shall briefly ask—Does not the question of Ireland, in every point of view, offer the strongest possible argument against the national policy of this country, for the time during which we have wasted our energies and squandered our wealth upon all the nations of the Continent; whilst a part of our own empire, which, more than all the rest of Europe, has needed our attention, remains to this hour an appalling monument of our neglect and misgovernment? Add to this, that our efforts have been directed towards the assistance of states for whose welfare we are not responsible; whilst our oppression and neglect have fallen upon a people over whom we are endowed with the power and accountable privileges of government—and the extent of the injustice of our statesmen becomes fully disclosed.

The neglect of those duties which, in such a case, devolve upon the governor, as in the instance of every infringement of moral obligations, bears within it the seeds of self-chastisement. The spectacle of Ireland, operating like a cancer in the side of England—of Poland, paralyzing one arm of the giant that oppresses her—of the two millions of negroes

in the United States, whose future disposal baffles the ingenuity of those statesmen and philanthropists who would fain wash out this indelible stain upon their religion and government:—these are amongst the lessons, which, if viewed properly, serve to teach mankind that no deed of guilt or oppression can be perpetrated with impunity, even by the most powerful—that, early or late, the invincible cause of truth will triumph against every assault of violence or injustice.

May the middle classes of Great Britain, in whom the government of this country is now vested, profit, in the case of Ireland, by these morals of past history!

PART III.—AMERICA.

CONTENTS.—British Inattention to the Progress of American Greatness.—Danger to British Commerce and Manufactures, from American Competition.—The Commerce and Population of Britain compared with those of America.—Disadvantages under which British Commerce lies.—The Debt.—Our Oppressive Public Establishments.—The British Army and Navy contrasted with those of America.—Are our present Naval and Military forces necessary for our protection?—Will the Americans continue to Manufacture?—Advantages possessed by the Americans.—Their astonishing Railroads.—Aristocratical obstacles to Railroads in Britain.—American Encouragement of Education contrasted with English.—Schools.—Newspapers.—Importance of a Free Press.—The Ancient and Modern London Trader compared.—Relative Commercial Positions of Britain and America.—The Land of Castes.—Public Economy and Non-Intervention.—Pressure of the Debt.—Effect of the Corn Laws.—The continued existence of the Corn Laws incompatible with National Prosperity and Justice to the National Creditor.

It is a singular fact, that, whilst so much of the time and attention of our statesmen is devoted to the affairs of foreigners, and whilst our debates in Parliament, and the columns of our newspapers, are so frequently engrossed with the politics of petty states, such as Portugal, Belgium, and Bavaria, little notice is taken of the country that ought, beyond all others, to engage the attention, and even to excite the apprehension, of this commercial nation.

A considerable portion of our countrymen have not yet reconciled themselves to the belief, that the

American colonies of 1780 are now become a first-rate independent power. The more aged individuals of this party, embracing, of course, a considerable section of the House of Peers, possess a feeling of half pique and half contempt towards the United States, somewhat analogous to that which the old Scotch Jacobite lady described by Burns, indulged with reference to Great Britain more than half a century after it had *rebelled*, as she persisted in designating it, against the legitimate rule of the Stuarts.

We have met with persons of this very respectable and influential party, who believe, conscientiously, that the Americans threw off the yoke of the mother country, merely with a view to escape the payment of certain sums of money due to English creditors;* and that they have ever since been struggling after a dubious kind of subsistence, by incurring fresh debts with us, and occasionally repaying our credulity in no very creditable coin. If these be told that the people of the United States constitute our largest and most valuable commercial connection—that the business we carry on with them is nearly twice as extensive as with any other people, and that our transactions are almost wholly conducted on ready-money terms—they will express surprise; but then they will predict that no good will arise ultimately from trading with Yankee Republicans.

If a word be said about the well-known religious and moral character of the Americans, these worthy people will stop you with the exclamation of, “How

* Who could their Sovereign, in their purse, forget,
And break allegiance but to cancel debt.—*Moore*.

can there be religion or morality in a country that maintains no established church?"

Offer to enter into an argument with these spirits of olden time, or to adduce evidence in reference to the present condition of the American States, and, ten to one, you will find that they have read the works of no authors or travellers upon that country, with the exception of those of Moore, Mrs. Trollope, and Basil Hall. If the news-rooms and the libraries that are under the direction of this prejudiced party be consulted, the former will be found to contain no specimens of the millions of newspapers that issue, cheap as waste paper, from the press of the United States; whilst, from the shelves of the latter, all books* calculated to give a favourable picture of the state of its flourishing community, are scrupulously excluded.

Should we look into the periodical journals which are under the patronage of the same class, we shall find the United States' news but rarely admitted to their columns, unless it be of a nature that tends to depreciate the character of republican institutions,

* An instance of this nature has come to our own knowledge. A gentleman presented to the Lincoln Mechanics' Institution a copy of Stuart's work on America, (probably the best, because the most matter of fact and impartial of all the writers upon that country), which an influential and wealthy individual of the neighbourhood, one of the patrons of the society, induced the committee to reject.

We do not feel intolerant towards these errors of judgment, the fruits of ignorance or a faulty education. The only wonder is, in this instance, to find such a character so out of his element, as to be supporting a Mechanics' Institute at all!

or serves as an occasion for quizzing the social peculiarities of American society.

Yet it is to the industry, the economy, and peaceful policy of America, and not to the growth of Russia, that our statesmen and politicians, of whatever creed, ought to direct their anxious study; for it is by these, and not by the efforts of barbarian force, that the power and greatness of England are in danger of being superseded: yes, by the successful rivalry of America, shall we, in all probability, be placed second in the rank of nations.

Nor shall we retard, but rather accelerate this fate, by closing our ears, or shutting our eyes, to all that is passing in the United States. We regard it as the first duty of every British statesman, who takes an enlightened interest in the permanent grandeur of his country, however unpalatable the task may prove, to weigh, in comparison with all the features of our national policy, the proceedings in corresponding measures on the other side of the Atlantic. Possibly we may not, after all, be enabled to cope with our more fortunate rivals in the energy or wisdom of their commercial legislation, owing to the embarrassments and burdens with which we are encumbered; but, still, it only the more becomes the character for high moral courage that belongs to us, to strive to understand from which quarter danger is the most to be apprehended.

By danger, we do not, of course, allude to warlike hostilities. England and America are bound up together in peaceful fetters, by the strongest of all the ligatures that can bind two nations to each other, viz.,

commercial interests; and which, every succeeding year, renders *more impossible*, if the term may be used, a rupture between the two Governments. This will be sufficiently apparent when we state, that a population of upwards of a million of the inhabitants of this country, supported by the various branches of the cotton industry, dependent for the supply of the raw material upon the United States,* would be deprived of subsistence; at the same time that a capital of thirty millions sterling, would, for the moment, be annihilated—if such a catastrophe were to occur as the suspension of the commerce between England and the United States; whilst the interests of the Americans would be scarcely less vitally affected by the same circumstance.

But we allude to the danger in which we are placed, by being overshadowed by the commercial and naval ascendancy of the United States. It has been through the peaceful victories of mercantile traffic, and not by the force of arms, that modern states have yielded to the supremacy of more successful nations. Thus the power and civilization of maritime Italy succumbed to the enterprise of Spain and Portugal; these again were superseded by the more industrious traders of Holland; who, in their turn, sank into insignificance before the gigantic growth of the manufacturing industry of Great Britain; and the latter power now sees, in America, a competitor in every respect calculated to contend with advantage for the sceptre of naval and commercial dominion.

* The total amount of cotton worked up in this country in 1832, was 277,260,490 lbs. Of which no less a proportion than 212,313,690 lbs. was imported from the United States.

Whether we view the rapid advance of the United States, during the last forty years, in respect of population or wealth, it is equally unparalleled in any other age or country. The past history, however, of this country, is so well known, indeed it is compressed into so short a space of recent history, that it would be trite to dwell upon it: our object is to draw a short comparison between the future prospects of the two countries.

The population of the United States was, at the first census, taken in 1790, found to be 3,929,328; and, in 1830, the number had, according to the fifth Government return, reached 12,856,171; exhibiting an increase, during the last ten years, of thirty-three per cent.; that is, doubling itself in rather less than twenty-five years.* In 1831, the population of the British Islands amounted to 24,271,763, being an increase of about fourteen per cent. upon the enumeration for 1821.† Looking, therefore, to the present proportionate increase of the two countries, and *considering the relative circumstances of each*, it may be predicted, that, in thirty years, the numbers of the two people will be about equal; and we further find, that, at the same ratio of augmentation, and making no allowance for the probable increase of emigration from Europe, the population of the United States will, in seventy years from this time—that is, during the lifetime of individuals now arrived at maturity—exceed one hundred millions.

* [According to the census of 1860, the population of the United States was 31,676,267.]

† [The population of the United Kingdom in 1861 was 29,346,834.]

These circumstances demonstrate the rapid tendency towards a superiority, so far as numbers go; but we apprehend that, in respect to the comparison of our commercial prospects with those of America, the position of Great Britain does not, according to facts which we have to state, wear a more flattering aspect.

We find, by a table in the "American Almanack" for 1835, that the exports from the United States, for the year ending the 25th September 1833, amounted to 90,140,000 dollars, or about twenty millions sterling of our money.

The British exports for the same period, were £47,000,000, of which thirty-six millions were of home commodities or manufactures, whilst the remaining eleven millions consisted of foreign and colonial produce. But it will be proper to exclude the colony trade from the question altogether, unless, in order to state the matter fairly, we agree to take into account, at the same time, the inhabitants of our dependencies, which would not improve our case.

Now, in order to institute a fair comparison between the respective trades of the two countries, it will be necessary to bear in mind, that, at the above period, the population of America was about fourteen millions, whilst that of the British empire may be reckoned to have been twenty-five and one-half millions.

We arrive, then, at this result, that, whilst our population, as compared with that of the United States, is as $25\frac{1}{2}$ to 14,* our commerce bears the proportion

* Bearing in mind that two millions of the American population are negroes, it makes the commerce decidedly in favour of the United States.

from 36 to 20. Further, if we compare the mercantile navy of Britain with that of America, we find the tonnage of the former, in 1832, to have been 2,261,860; whilst that of the latter, in 1833, amounted to 1,439,450 tons; by all which it appears clear, that America is, in proportion to its population, at this moment, carrying on as extensive a commerce as England, or any other state in the world.

But we should take a very inadequate view of the comparative progress of the two nations, unless we glanced at other circumstances, which will affect very oppositely the career of England and the United States, in their future race of commercial rivalry.

This Republican people presents the only example of past—as we believe it will prove of future—history, in which a nation has honourably discharged its public debt; and the greatest financial pressure its Government will in future have to contend against, singular as the fact may appear to us, is the difficulty of applying its surplus treasure impartially to the services of the separate states. The time is gone by, we believe, when people could be found to argue, that a national debt is a national blessing.*

* Another fanciful theory upon the subject of the debt, invented, we believe, by Coleridge (it must have been by a *poet*, for the consolation of less ideal minds), has been lately promulgated. We are told that the country is none the worse off for the national debt, because it is all owing to Englishmen; and that, therefore, it is only like drawing off the blood from one part of the body to inject it into another vein—it is *still all in the system*. We feel sorry to molest so comfortable an illusion.

Sure we are, that, in our case, no person possessing sound reason will deny that we, who find it necessary to levy upwards of thirty millions annually upon the necessaries of life, must be burdened with grievous disadvantages, when brought into commercial competition with the untaxed labour of the inhabitants of America.

But it is not only the load of debt, heavy as that is, that we have to contend with; our oppressive public establishments are, throughout, modelled, *unnecessarily, we believe, for the service of the commonwealth*, upon a scale enormously disproportioned to those of our more economical rivals. We will pass by the whole of our civil expenditure, because we have not space for the detailed notice of its individual items; and we shall proceed to notice, as more connected with the design of this pamphlet, our army and navy, as compared with the military and naval forces of the United States.

We find, from a table in “Reuss’s Statistics of the United States,” that the number of seamen in the American mercantile navy, is estimated at 86,000; whilst the States Government employs, in vessels of

But does it make no difference in what manner the *outlay* is invested—whether eight hundred millions of capital be sunk in the depths of the sea, or put out to good interest? Is there no difference between such a sum being thrown away, *destroyed, annihilated*, in devastating foreign countries, whilst the nation is called upon, out of its remaining capital, and with its gratuitous labour, to pay the interest—and the like amount being employed in making canals, railways, roads, bridges, drains, docks, &c.; planting trees, educating the people, or in any other way in which *it would return its own interest of capital?*

war, 6,000* men. The British merchants' service, exclusive of the colonial registry, supports 140,000 sailors; and the number voted for the royal navy, in 1833, was 27,000 men. Thus, then, we arrive at the unsatisfactory result, that, whilst in America, the Government's, as compared with the merchants' service, contains in the proportion of hands, rather less than one in fourteen, the number of men employed in the royal navy of Britain, in comparison with the quantity supported by the merchants' service, is nearly in the ratio of one to five.

The royal navy of England, actually in commission at this time (see the *United Service Magazine* for February), consists of one hundred and forty-eight vessels of war; of which there appear to be, according to the same authority, forty-six in the different harbours of Great Britain; thirty-three in the Mediterranean, thirteen on the coast of Africa,† twenty-seven in the West Indies, and the remainder in various other destinations.

* We believe, almost incredible as the fact is even to ourselves, that the British naval *commissioned* officers exceed, by upwards of a thousand, the whole number of the men and officers of the American navy. A comment of a similar tenor, applied to the army of England, is to be found in a following page.

Yet we are in the twentieth year of peace, and every King's speech assures us of the friendly disposition of all foreign powers!

† Upon what principle of justice are the people of these realms subjected to the whole expense of attempting to put down the slave trade. We say attempting, because it is well known that the traffic is carried on as actively as ever; and, during the last year, the number of negroes conveyed away from the shores of Africa has been estimated at twenty thousand. Here is a horrid trade, which will entail a dismal reckoning, at the hands of Pro-

We find, in the *American Almanack* for 1835, the United States navy given as twenty-one ships of war, of the following description :—One line-of-battle ship, three frigates, ten sloops, seven schooners.*

It appears, then, that our royal navy contains, as nearly as possible, seven times as many ships as are to be found in the Government service of America.

Now, whatever objections may be urged with respect to other branches of expenditure, against a comparison of our burthens with the corresponding economy on the other side of the Atlantic, we think no reasonable mind will deny, that it is by reference to the commerce of a people alone that we can form a correct judgment of their policy, so far as the marine service is concerned, and judge of their ability to support permanently their naval establishments.

The disadvantageous nature of our position, in comparison with that of America, will be better understood, if we repeat in two words, as the substance of what we have proved from the foregoing figures, that, whilst the population, exports, tonnage,

vidence, upon the future generations of those countries that encourage it! But by what right, by what credentials from on high, does England lay claim to the expensive and vain office of keeping all mankind within the pale of honesty?

* These statements refer to the ships in commission. Our navy comprises about six hundred vessels of all sizes and in all conditions. The whole American naval force consists of seventy ships. Yet Sir James Graham, when bringing forward our navy estimates for 1833, actually made use of this comparison to justify our force. So much for the *usefulness* of that which is called dexterity in debate!

and mercantile seamen of Great Britain are not double those of the United States, our royal navy is about six times as great as the corresponding Government force of that country.

But, if we proceed to a comparison of the land forces, we shall find them to exhibit a yet more striking disproportion in the burthens of the two nations.

The entire military service of America, comprises rather less than 7,000 men. In 1833, the Parliament of Great Britain voted 90,000 soldiers for the army of this country. Here, then, we perceive the odds are—still bearing in mind the population, &c., of the two countries—as nearly as possible, six to one against us.

If we had the space, however, to allow of our entering into a comparison of details, we should find that the proportion of our officers greatly exceeds the above ratio. It will suffice to prove this, when we add, that the number of our commissioned officers alone, at this time, exceeds the entire amount of the army of the United States; and of these we see, by the army list for 1835, that 2,087 are field officers, of and above the rank of major!

To render the comparison of the respective burthens of the two people more simple and complete, we shall add their expenditure under these heads.

In the budget of 1833, the army and navy estimates of Great Britain were as follows:—

Army	.	.	.	.	£7,006,496
Navy	.	.	.	.	4,505,000
Ordnance	.	.	.	.	1,634,817

making a total of £13,146,313 for these warlike purposes.

In 1832, according to the *American Almanack* for 1835, the military service of the United States, including fortifications, arsenals, armories, ordnance, internal improvements, &c., cost £1,134,589; whilst the navy estimate was for £817,100, making a total of £1,951,689.

Thus, it appears, that our gross expenditure, under the United Service heads, is in the ratio of six and a-half to one, as compared with that of America;—a country, be it repeated, whose population, trade, and registered tonnage, are more than the half of our own—a country, too, whose public debt is cancelled, whilst ours amounts to nearly eight hundred millions!

But it will be said, that our local position making it necessary to guard our shores with this demonstration of power, and our colonies calling for a vigilant protection, render unfair a comparison of this kingdom with the United States. We believe it might be shewn, that the dependencies of Great Britain are, at this moment, and, in future, are destined still more to be, the source of a considerable amount of taxation and pecuniary loss to the mother country; and we trust that some abler pen will be applied to the elucidation of this important question.

With respect to our proximity to the Continent, we recommend the experiment to be tried, whether that need necessarily embroil us in continental politics. Let us imagine that all our ambassadors and consuls were instructed to take no further share in

the domestic concerns of European nations, but, throwing overboard the question of the balance of power—as we have long done that equally absurd bugbear of our ancestors, the balance of trade—to leave all those people to their own quarrels, and to devote their attention, exclusively, after the example of the Americans, to the *commercial interests* of their country. This might prevent our diplomatists displaying their address in finessing with Metternich, or Pozzo di Borgo: it might save the bones of our couriers, who now scour the continent of Europe, carrying despatches and protocols; and it might enable us to dispense with the services of one-half of the establishment at the foreign office. But will any one who understands the subject, pretend to tell us, that our trade would suffer by such a change?

Or if we imagine that our army and navy were reduced one-half, in consequence of this improvement of our policy, does any person seriously apprehend that these islands would be in danger of being molested by any European power? If such there be, let him recollect that the British empire contains a population of twenty-five millions of free people, compressed within a space of little more than three hundred miles square—probably a denser crowd of human beings than was ever before found upon a similar area: and, further let it be borne in mind, that rail-roads are now in progress for connecting one extremity of England with the other, in such a way, that not only any required force of men, but the entire munitions of war, may be transported, in twelve hours, from Lancashire or Yorkshire, to the

coast of Sussex or Kent—thus converting, as it were, the entire island into a fortified position of such wonderful strength, that the genius of Vauban or Marlborough could not have conceived anything so formidable. Which is the power of the Continent that will make a descent upon a people placed in such an attitude?

But supposing even that such a scheme should be contemplated, it will be owned, we suppose, that some preparation for so mighty a conquest would be necessary, which must afford us the necessary time for preparations of defence. No one will contend, that a fleet and an army of sufficient magnitude to pounce upon England for its prey, could be conjured up on the scene, like the creations of Harlequin's wand, without the spectators knowing, or caring to know, that the machinery for so grand a performance had been long in contrivance.

Besides, is it not apparent that henceforth the pressure of their own domestic affairs will engross the resources, and will impair the external power of all the Governments of Europe. *Reform Bills* will be demanded by their people, but they will not be obtained without bloodshed; and all must foresee, that the struggle between the antagonist principles of feudalism and constitutionalism is inevitable throughout the whole of the Continent.

But to recur to the subject of America. It might be said that the primary cause of all the prosperity and happiness of its people is to be found in the wisdom of that advice which we have prefixed for the motto of this pamphlet. Happily for that nation,

this precept has been religiously obeyed ; for never have the political concerns of other states been suffered for one hour to divert the United States' legislature from the pursuit of the just interests of its own people. The results may be seen, not only in unparalleled advances in wealth and civilization at home, but in the fact we have just demonstrated, and which, we doubt not, will surprise most of our readers, that even the foreign commerce of this people is, in proportion to population, as great, or greater, than our own ; notwithstanding our battles by land and by sea, and notwithstanding those expensive fruits of our victories, the colonies, that east, west, north, and south, own our dominion !

It is a question of very considerable interest to us, whether America will continue her career as a manufacturing country, after the protective duties, which have professedly created her present cotton and other interests, shall have, in pursuance of the recent tariff law, been partially repealed.

It is the opinion of some writers, whose works are entitled to deference, that the United States cannot for centuries become our rival in manufactures. They argue that, with an unlimited extent of unsettled territory to tempt the inhabitants to engage in the natural labour of agriculture, they will not be induced, unless for much higher wages than in England, to follow the more confined and irksome pursuits of the factory or workshop.

But does not the present industry of the population of the New England states tend to prove that there is a disposition, in the people of the older portions of

this country, to settle down into the pursuits incident to towns at an advanced stage of society, and leave to agriculture the natives of the newer states? We shall find that the exports from Boston comprise—among other articles of domestic manufacture equally unconnected with the system of factory labour—annually, about 3,500,000 pairs of boots and shoes, 600,000 bundles of paper, together with a large quantity of cordage, nails, furniture, &c.

We are inclined, however, to view the natives of the maritime portion of the Union, but, particularly, the inhabitants of the New England states, as eminently commercial in their tastes and characteristics; and, as such—looking to the amount of capital at present embarked in their cotton manufacture, as well as to the circumstance of the raw material being the produce of their own soil, and bearing in mind the prodigious increase that is taking place in the numbers of their people—we profess to see no prospect of this our own staple industry being abandoned; and, if not given up, we may expect, from the well-known and well-deserved panegyric paid by Burke to the enterprise of the New Englanders, in prosecuting the whale-fishing, that the competition, on the part of such a people, will be maintained with energy.

The capital employed in the various branches of the cotton manufacture in the United States, is, according to a calculation for 1832, in Reuss's Statistics of America, in amount about £11,000,000; and the consumption of raw cotton is estimated at 173,800 bales, or about one-fifth of all the growth of the country, and, as nearly as possible, a fifth of the

quantity worked up, during the same year, in Great Britain.

The greater portion of all the products of this labour is consumed at home: the rest is exported in the shape principally of heavy calicoes, that have sustained a competition with our own fabrics in the Mediterranean and the East.

Some occasional shipments of low yarns have been made to this country; but these transactions have not been of considerable magnitude.

Bearing in mind that the supply of the raw material of nearly one-half of our exports is derived from a country that threatens to eclipse us by its rival greatness, we cannot, whilst viewing the relative positions of England and the United States at this moment, refrain from recurring to the somewhat parallel cases of Holland and Great Britain, before the latter became a manufacturing state, when the Dutchman purchased the wool of this country, and sold it to us again in the form of cloth. Like as the latter nation became at a subsequent period, we are now overwhelmed with debts, contracted in wars, or the acquisition of colonies; whilst America, free from all burdens, as we were at the former epoch, is prepared to take up, with far greater advantages, the fabrication of their own cotton than we did of our wool. The Americans possess a quicker mechanical genius than even ourselves (such, again was the case with our ancestors, in comparison with the Dutch), as witness their patents, and the improvements for which we are indebted to individuals of that country in mechanics—such as spinning, engraving, &c. We gave additional

speed to our ships, by improving upon the naval architecture of the Dutch ; and the similitude again applies to the superiority which, in comparison with the British models, the Americans have, for all the purposes of activity and economy, imparted to their vessels.

Such are some of the analogous features that warrant the comparison we have instituted ; but there are other circumstances of a totally novel character, affecting, in opposite degrees, the destinies of these two great existing commercial communities, which must not be lost sight of.

The internal improvement of a country is, undoubtedly, the first and most important element of its growth in commerce and civilization. Hence our canals have been regarded by Dupin as the primary material agents of the wealth of Great Britain. But a new invention—the railway—has appeared in the annals of locomotion, which bids fair to supersede all other known modes of land transit ; and, by seizing at once, with all the energy of a young and unprejudiced people, this greatest discovery of the age, and planting, as it were, its fruits first throughout the surface of their territory, the Americans have made an important stride in the career of improvement, in advance of every nation of Europe.

The railroads of America present a spectacle of commercial enterprise, as well as of physical and moral triumph, more truly astonishing, we consider, than was ever achieved in the same period of time in any other country. Only in 1829 was the experiment first made, between Liverpool and Manchester,

of applying steam to the navigation of land, so to speak, by means of iron railways, for the conveyance of passengers and merchandise; and now, in 1835, being less than seven years after the trial was first made and proved successful, the United States of America contain upwards of seventeen hundred miles of railroads in progress of construction, and of which no less than one thousand miles are complete and in actual use.* †

* "The railroads, which were partly finished, partly in progress, at the time when I visited the United States, were as follow :—

	Miles.
Baltimore and Ohio (from Baltimore and Pittsburgh)	250
Massachusetts (from Boston to Albany) . . .	200
Catskil to Ithaca (State of New York) . . .	167
Charleston to Hamburgh (South Carolina) . . .	135
Boston and Brattleboro' (Massachusetts and Vermont)	114
Albany and New York	160
Columbia and Philadelphia (from Philadelphia to York)	96
Lexington and Ohio (from Lexington to Cincinnati) .	75
Camden and Amboy (New Jersey)	60
Baltimore and Susquehanna (Maryland)	48
Boston and Providence (Massachusetts and Rhode Island)	43
Trenton and Philadelphia	30
Providence and Stonington	70
Baltimore and Washington	38
Holliday's Burgh and Johnstown (Pennsylvania) .	37
Ithaca and Oswego (New York)	28
Hudson and Berkshire (New York and Massachusetts)	25
Boston and Lowell (Massachusetts)	24
Senectady and Saratoga (New York)	21½
Mohawk and Hudson (New York)	15
Lackawaxen (from Honesdale to Carbondale, Pennsylvania)	17
Frenchtown to Newcastle (Delaware and Maryland) .	16
Philadelphia and Norristown (Pennsylvania) . . .	15

The enthusiasm with which this innovation upon the ancient and slower method of travelling was hailed in America — by instituting a newspaper expressly for its advocacy, and by the readiness of support which every new project of the kind encountered — evinced how well this shrewd people discovered, at a glance, the vast advantages that must accrue to whichever nation first effected so great a saving in that most precious ingredient of all useful commodities, time, as would be gained by the application of a discovery which trebled the speed, at the same time reducing the money-cost, of the entire intercourse of the community.

Already are all the most populous districts of the United States intersected by lines of railroads; whilst, among the number of unfinished, but fast advancing undertakings, is a work, now half completed, for

	Miles.
Richmond and Chesterfield (Virginia) . . .	12
Manch Chunk (Pennsylvania) . . .	9
Haarlem (from New York to Haarlem) . . .	8
Quincey (from Boston to Quincey) . . .	6
New Orleans (from Lake Pontchartrain to Orleans) .	5 $\frac{1}{4}$

The extent of all the railroads forms an aggregate of one thousand seven hundred and fifty miles. Ten years hence, this amount of miles will probably be doubled or trebled; so that scarcely any other roads will be used than those on which steam-carriages may travel."—*Arfwedson's Travels in 1834*. [Note to the Sixth Edition of "England, Ireland, and America."]

† [It may be stated, on the authority of Mr. Robert H. Berdell, President of the Erie Railway Company, that thirty-five thousand miles of railway are now in operation in the United States, and that nearly three thousand millions of dollars are invested in these gigantic enterprises.]

connecting Baltimore on the Chesapeake, with the Ohio river at Wheeling, a distance of more than two hundred and fifty miles.

Not content, however, with all that has been done, or is still doing, a scheme is at present favourably agitated in the public press of that country, that shall connect Washington city with New Orleans, by a series of railways, which, with those already in progress between New York and Washington, will join the Atlantic at the mouth of the Hudson and the Mexican Gulf; a project which, if completed, will enable a traveller to visit New York from New Orleans in four days—a transition of scene that may be better appreciated, when it is remembered, that a person might pass, in winter, from the frozen banks of the Hudson, into the midst of the orange and sugar regions of the Mississippi in about ninety hours! Other plans, of even a more gigantic character, are marked out as in contemplation, upon the latest map published of the United States*—plans that nothing but the prodigies already achieved by this people, prevent us from regarding as chimerical.

It demands not a moment's reflection to perceive the immense advantages that must ensue from these improvements to a country which, like America, contains within itself, though scattered over so wide a surface, all the elements of agricultural and manufacturing greatness. By subjecting this vast territory to the dominion of steam, such an approximation of the whole is attained, that the coals and iron of Pennsylvania, the lead of Missouri, the cotton of

* B, Amos Lay.

Georgia, the sugar of Louisiana, and the havens of New York and New England, will all be brought into available connection with each other; in fact, by the almost miraculous power of this agent, the entire American continent will, for all the purposes of commercial or social intercourse, be compressed into an area not larger than that of England, supposing the latter to possess only her canals.

Nothing more strongly illustrates the disadvantages under which an old country, like Great Britain, labours in competing with her younger rival, than to glance at the contrast in the progress of railroads in the two empires.

At the same time that, in the United States, almost every day beheld a new railway company incorporated, by some one of the State's legislatures, at the cost only of a few dollars, and nearly by acclamation, the British Parliament intercepted by its votes some of the most important projects that followed in the train of the Liverpool railroad.

The London and Birmingham company, after spending upwards of forty thousand pounds, in attempting to obtain for its undertaking the sanction of the legislature, was unsuccessful in the House of Lords. The following characteristic questions are extracted from the evidence taken before the committee:—

“Do you know the name of Lady Hastings' place?—How near to it does your line go?—Taking the look out of the principal rooms of the house, does it run in front of the principal rooms?—How far from the house is the point where it becomes visible?—

That would be about a quarter of a mile?—Could the engines be heard in the house at that distance?—Is there any cutting or embankment there?—Is it in sight of the house?—Looking to the country, is it not possible that the line could be taken at a greater distance from the residence of Lady Hastings? * *

“Was that to pass through Lords Derby and Sefton’s land?—Yes, they both consented. They threw us back the first year, and we lost such a line as we could never get again. Since which they have consented to the other line going through their property. * * * * Supposing that line as easy for you as the present, was there any objection arising from going through anybody’s park?”

The following question, put on the same occasion, by a peer to a shopkeeper, is one that probably would not have been asked by any other person but a hereditary legislator:—

“Can it be of any great importance whether the article goes there in five or six hours, or in an hour and a half?”

The Brighton and several other railways were abandoned, through dread of the expensive opposition that was threatened in Parliament; amongst which the Great Western line was successfully opposed by the landowners, seconded by the heads of Eton College, under the plea that it would tend to impair the character of the scholars! And a large party, headed by the Marquis of Chandos, actually met in public to celebrate, with drinking and rejoicing, the frustration of this grand improvement. Yet this nobleman has since had the offer of a voice

in the cabinet council of the King; and, but that he is as honest as he most assuredly is unenlightened and prejudiced, he might now be one of the ministers of this commercial country!

But to recur to the consideration of affairs on the other side of the Atlantic. There is another peculiarity in the present attitude of the American people, as compared with our own, that is probably more calculated than all others to accelerate their progress towards a superior rank of civilization and power. We allude to the universality of education in that country. One thirty-sixth portion of all public lands, of which there are hundreds of thousands of square miles unappropriated, is laid apart for the purposes of instruction. If knowledge be power, and if education give knowledge, then must the Americans inevitably become the most powerful people in the world.

Some writers have attempted to detract from this proud feature in the policy of the United States, by adducing, as examples, the backwoodsman and his family, and holding up their uncultivated minds, as well as their privation of Christian instruction, as proofs of the religious and moral abandonment of American society; forgetting that these frontier sections of the community are thinly spread over an inhospitable wilderness, where it must be acknowledged that no state provision for mental improvement could possibly embrace all their scattered members. When a man is placed at the distance of perhaps ten miles from his next neighbour, he is driven, as Dr. Johnson observes, to become his own

carpenter, tailor, smith, and bricklayer ; and it is from no fault in the laws, but owing to the like unavoidable nature of things, that the same solitary individual must also be left to act the part of teacher and pastor.

But, by referring to the last message of the Governor of New York to the legislature of that State, which happens to be before us, we are able to exhibit to our readers, by a very brief quotation, the state of education in that most populous division of the Union.

“In the whole range of your duties,” says this most enlightened address, “there is no subject in which the interests of the people are more deeply involved, or which calls for higher efforts of legislative wisdom, than the cause of education. The funds already provided by the State for the support of common schools is large, but not so ample as the exceedingly great importance of the object demands.” After some other details, it goes on to say—“Eight hundred and thirty-five towns and wards (the whole number in the State) have made reports for the year 1833. There are nine thousand eight hundred and sixty-five school districts; the whole number of children, between the ages of five and sixteen years, in the State, was five hundred and thirty-four thousand and two; and the number instructed in the common schools in 1833 was five hundred and thirty-one thousand two hundred and forty. * * * The whole amount expended during the year 1833, on the common schools, cannot fall short of one million two hundred thousand dollars.”*

* [Mr. Bright, in the speech which he delivered at Birmingham on the 13th December, 1865, said:—“I have just seen a report

Bearing in mind that this refers only to one State of the Union, containing rather less than two millions of inhabitants, could we imagine a more striking contrast to the above statement than in the fact that, during the corresponding session of the British Parliament, a sum of £20,000 was voted towards educating the people of England; whilst, in close juxtaposition to this, was a grant of £60,000 for the purpose of *partly* furnishing Buckingham Palace!*

The very genius of American legislation is opposed to ignorance in the people, as the most deadly enemy of good government. Not only are direct measures, such as we have just quoted in the case of New York, taken to instruct the poor throughout the United States—not only are all newspapers and ad-

of a speech delivered last night by Mr. Watkin, who has recently returned from the United States. Speaking of education, he says that, taking the nine Northern States to contain ten millions and a half of people, he found there were 40,000 schools, and an average attendance of 2,133,000 children, the total cost of their education being \$9,000,000. In the four Western States, with a population of 6,100,000, there are 37,000 schools, with an average attendance of nearly one million and a half scholars, at a cost of \$1,250,000. Thus, in a population of sixteen millions, there are 77,000 schools, to which every poor child can go, at a cost of £2,000,000 a year. He thought this highly to the credit of our American cousins, and I perfectly agree with him on that point.”]

* [This was written before the date of the education movement, in which Mr. Cobden from an early period took a conspicuous part. According to the last Report of the Committee of Council on Education, the sum of £8,087,296. 1s 11d has been expended in Parliamentary grants from 1839 to 31st December, 1864. “The expenditure from Education grants,” in the latter year, amounted to £655,041. 11s 5d.]

vertisements untaxed—but care is used, by excepting from fiscal burdens the humblest ingredients of the *materiel* of printing—such as paper, rags, type, &c.—to render knowledge as cheap and accessible as possible.

The newspaper press forms a distinguishing and rapidly improving feature in the economy of the United States. In 1834, according to the *American Almanack* for 1835, the aggregate of newspapers published under different titles in America was 1,265, of which ninety were daily journals; and the entire number of copies circulated during the year is estimated at ninety millions.*

In the British islands three hundred and sixty-nine newspapers are published, of which seventeen only issue daily.† The annual sale of these is estimated at about thirty millions.

If, therefore, we compare the newspaper press of America and England together, allowing for the disproportion of inhabitants in the two countries, we shall be compelled to acknowledge that there is more than six times as much advertising and reading on the other side of the Atlantic as in Great Britain.

* [The census of 1860 states that 4,051 newspapers and periodicals were then published in the United States, of which 3,242 were political, the remainder being devoted to religion and literature. The annual aggregate circulation of copies was estimated at 927,951,548.]

† [From “*Mitchell’s Newspaper Directory*” for 1865, it appears that 1271 journals are now published in the United Kingdom, exclusive of 554 Reviews and Magazines. There are no trustworthy statistics of the circulation of these publications.]

There are those who are fond of decrying newspaper reading. But we regard every scheme that is calculated to make mankind *think*—every thing that, by detaching the mind from the present moment, and leading it to reflect on the past or future, rescues it from the dominion of mere sense—as calculated to exalt us in the scale of being; and whether it be a newspaper or a volume that serves this end, the instrument is worthy of honour at the hands of enlightened philanthropists.

We know of nothing that would tend more to inform the people of England, and especially of Ireland, than removing the excise fetters from our press. Independently of the facilities to commerce, and the benefits which must ensue to temperance and morals generally, a free press would, by co-operating with a good government, (and henceforth it is our own fault if we have a bad one,) assist essentially the efforts of those who desire to reduce the expenditure of the state, and help us to dispense with that costly voucher of our ignorance, the standing army of this country.

We have thus hastily glanced at a few of the points of comparison to be found in the prospects of Great Britain and America, at this moment. To what shall we liken the relative situations of these two great commercial and naval rivals? We will venture on a simile.

Such of our readers as remember the London tradesman of thirty years ago, will be able to call to mind the powdered wig and queue, the precise shoes and buckles, and the unwrinkled silk hose, and tight

inexpressibles, that characterised the shopkeeper of the old school. Whenever this stately personage walked abroad on matters of trade, however pressing or important, he never forgot for a moment the dignified step of his forefathers; whilst nothing gratified his self-complacency more, than to take his gold-headed cane in hand, and, leaving his own shop all the while, to visit his poorer neighbours, and to shew his authority by inquiring into their affairs, settling their disputes, and compelling them to be honest, and to manage their establishments according to his plan. His business was conducted throughout upon the formal mode of his ancestors. His clerks, shopmen, and porters, all had their appointed costumes; and their intercourse with their chief, or with each other, was disciplined according to established laws of etiquette. Every one had his especial department of duty, and the line of demarcation at the counter was marked out and observed with all the punctilio of neighbouring, but rival states. The shop of this trader of the old school retained all the peculiarities and inconveniences of former generations; its windows displayed no gaudy wares to lure the vulgar passer-by, and the panes of glass, inserted in ponderous wooden frames, were constructed exactly after the ancestral pattern. Such were some of the solemn peculiarities of the last generation of tradesmen.

The present age produced a new school of traders, whose first innovation was, to cast off the wig, and cashier the barber with his pomatum-box, by which step an hour was gained in the daily toilet. Their

next change was, to discard the shoes and the tight unmentionables—whose complicated details of buckles and straps, and whose close adjustment occupied another half-hour—in favour of Wellingtons and pantaloons, which were whipped on in a trice, and gave freedom, though, perhaps, at the expense of dignity, to the personal movements during the day. Thus accoutred, these supple dealers whisked or flew, just as the momentary calls of business became more or less urgent; whilst so absorbed were they in their own interests, that they scarcely knew the names of their nearest neighbours, nor cared whether they lived peaceably or not, so long as they did not come to break their windows.

Nor did the spirit of innovation end here; for the shops of this new race of dealers underwent as great a metamorphosis as their owners. Whilst the internal economy of these was reformed with a view to give the utmost facility to the labour of the establishment, by dispensing with all forms, and tacitly agreeing even to suspend the ordinary deferences due to station, lest their observance might, however slightly, impede the business in hand—externally, the windows, which were constructed of plate glass, with elegant frames extending from the ground to the ceiling, were made to blaze with all the tempting finery of the day.

We all know the result that followed from this very unequal rivalry. One by one the ancient and quiet followers of the habits of their ancestors yielded before the active competition of their more alert neighbours. Some few of the less bigoted disciples

of the old school adopted the new-light system, but all who tried to stem the stream were overwhelmed; for with grief we add, that the very last of these very interesting specimens of olden time that survived, joining the two generations of London tradesmen, and whose shop used to gladden the soul of every Tory pedestrian in Fleet Street, with its unreformed windows, has at length disappeared, having lately passed into the Gazette, that schedule A of anti-reforming traders.

That which the shopkeeper of the present day is to him of the last age, such, comparing great things with small, is the commercial position of America as contrasted with that of Great Britain at the present moment. Our debt may be called the inexpressibles or tights, which incessantly restrain us from keeping up with the nimble pace of our pantalooned rivals. The square-toed shoes* and the polished buckles may be compared to the feudal laws and customs, which, in competition with Wellington-booted brother Jonathan, impede the march of improvement and the enterprise of Englishmen. The powdered

* There is scarcely a large town in England, whose prosperity and improvement are not vitally affected by the operation of our laws of entail. In the vicinity of Manchester, scarcely any freehold land can be bought; Birmingham is almost wholly built upon leasehold land; Wolverhampton has long been presenting a dilapidated aspect, in the best part of the town, in consequence of the property required for improvement being in the hands of the church, and consequently inalienable. In many parts, manufactures are, from the like obstructing causes, prevented extending themselves over our coal-beds. The neighbourhood of Bullock Smithy might be instanced for example.

wig and queue we shall liken to our Church Establishment, which, although very ornamental and imposing in appearance, does yet engross a great share of the time and attention of our Parliament to adjust it properly,* all of which the legislature of our straight-haired competitor has been enabled to apply to the encouragement of a more prosperous trade. The untaxed newspapers of America, with their wide expanses of advertisements, contrasted† with the stamped sheets of this country, are the new and old light windows of the two generations of shopkeepers. The quickened gait of the trader of to-day, and the formal step of his predecessor, are the railways of the United States in competition with our turnpikes and canals. And, to complete the simile, if we would see in the conduct of the two nations a resemblance to the contrast between the policy of the dealer of the old school, who delighted to meddle in the concerns of his neighbours, and that of the reformed tradesman who rigidly con-

* It would form an instructive summary, to collect from our parliamentary history, for the last three hundred years, details of the time spent in the vain endeavour to make conscience square with acts of Parliament.—See the debates in both Houses on Ireland in 1832 and 1833, for examples.

† It is not uncommon to find two thousand advertisements, principally of merchandise, contained in a single copy of a New York journal. We have counted no less than one hundred and seventy announcements in one column or compartment of the *New York Gazette*. Of course the crowded aspect of one of these sheets, in comparison with a London newspaper, is as different as is one of the latter in contrast with a Salisbury or any other provincial journal.

fixed his attention to the duties of his own counter—let us picture England, interfering with and managing the business of almost every state in Europe, Asia, and Africa, whilst America will form no connection with any one of them, excepting as customers.

What! shall we consign Old England, then, to ruin? Heaven forbid! Her people are made of tough materials, and he would be but a dastardly politician that despaired of them even yet. We say not, then, that this country will, like the antique establishment of the individual trader, perish at the feet of its more youthful and active competitor; but we fervently believe, that our only chance of national prosperity lies in the timely remodelling of our system, so as to put it as nearly as possible upon an equality with the improved management of the Americans.

But let us not be misconstrued. We do not advocate republican institutions for this country. We believe the government of the United States to be at this moment the best in the world; but then the Americans are the best* people; and we have a

* We mean individually and nationally. As individuals, because, in our opinion, the people that are the best educated must, morally and religiously speaking, be the best. As a nation, because it is the only great community that has never waged war excepting in absolute self-defence;—the only one which has never made a conquest of territory by force of arms; (contrast the conduct of this government to the native Indians on the Mississippi, with our treatment of the Aborigines on the Swan river);—because it is the only nation whose government has never had occasion to employ the army to defend it against the people;—the only one which has never had one of its citizens convicted of

theory, that the government of every state is always, excepting periods of actual change, that which is the best adapted to the circumstances and wants of its inhabitants.

But they who argue in favour of a republic, in lieu of a mixed monarchy, for Great Britain, are, we suspect, ignorant of the genius of their countrymen. Democracy forms no element in the materials of English character. An Englishman is, from his mother's womb, an aristocrat. Whatever rank or birth, whatever fortune, trade, or profession, may be his fate, he is, or wishes or hopes to be an aristocrat. The insatiable love of caste that in England, as in Hindostan, devours all hearts, is confined to no walks of society, but pervades every degree, from the highest to the lowest.* Of what conceivable use, then, would it be to strike down the lofty patricians that have descended to us from the days of the Normans and Plantagenets, if we of the middle class—who are more enslaved than any other to this passion—are prepared to lift up, from amongst our treason;—and because it is the only country that has honourably discharged its public debt.

The slavery deformity was forcibly impressed upon this people in its infancy by the mother country. May the present generation outgrow the blemish!

* A diverting specimen of aristocracy in low life is to be found in an amusing little volume, called, "Mornings at Bow Street." A chimney-sweep, who had married the daughter of a costermonger, against the latter's consent, applied to the magistrate for a warrant to recover the person of his wife, who had been taken away from him by her father. The father did not object to the character of the husband, but protested against the connection as being "*so low*."

selves, an aristocracy of mere wealth—not less austere, not less selfish—only less noble than that we had deposed. No: whatever changes in the course of time education may and will effect, we do not believe that England, at this moment, contains even the germs of genuine republicanism.

We do not, then, advocate the adoption of democratic institutions for such a people. But the examples held forth to us by the Americans, of strict economy, of peaceful non-interference, of universal education, and of other public improvements, may, and, indeed, must be emulated by the government of this country, if the people are to be allowed even the chance of surviving a competition with that republican community. If it be objected, that an economical government is inconsistent with the maintenance of the monarchical and aristocratic institutions of this land, then we answer, let an unflinching economy and retrenchment be enforced—*ruat cœlum!*

Of the many lessons of unsophisticated and practical wisdom which have—as if in imitation of that arrangement of perpetual decay and reproduction that characterises all things in material nature—been sent back from the New World to instruct the Old, there are none so calculated to benefit us—because there are none so much needed—as those maxims of providence and frugality, to which Franklin first gave birth, and which, gaining authority and strength from the successive advocacy and practice of Washington, Jefferson, and now of Jackson, have at length become identified with the spirit of the laws and institutions of the United States.

An attempt has been made latterly by that class of our writers* denominated Conservative, to deride this parsimony of the Franklin school as unworthy of the American character. But we are, at this present moment, writhing beneath the chastisement due to our violations of the homely proverbs of "Poor Richard;" and it is only by returning within the sober limits of our means, and rigidly husbanding our time and resources, and by renouncing all idle pomp and luxury—it is by these methods only, and not by advocating still farther outrages of the laws of prudence, that this nation can be rescued from the all but irretrievable embarrassment into which its own extravagance and folly have precipitated it.

The first, and, indeed, only certain step towards a diminution of our government expenditure, must be the adoption of that line of foreign policy which the Americans have clung to, with such wisdom and pertinacity, ever since they became a people.

If ever there was a territory that was marked out by the finger of God for the possession of a distinct nation, that country is ours; whose boundary is the ocean, and within whose ramparts are to be found, in abundance, all the mineral and vegetable treasures requisite to make us a great commercial people. Discontented with these blessings, and disdaining the natural limits of our empire, in the insolence of our might, and without waiting for the assaults of envious enemies, we have sallied forth in search of conquest or rapine, and carried bloodshed into every quarter of the globe. The result proves, as it ever

* Basil Hall's spending class.

must, that we cannot violate the moral law with impunity. Great Britain is conscious that she is now suffering the slow but severe punishment inflicted at her own hands—she is crushed beneath a debt so enormous that nothing but her own mighty strength could have raised the burden that is oppressing her.

Again we say (and let us be excused the repetition of this advice, for we write with no other object but to enforce it), England cannot survive its financial embarrassments, except by renouncing that policy of intervention with the affairs of other states, which has been the fruitful source of nearly all our wars.

We trust that this opinion will be generated throughout the population of this country, and that the same spirit will be reflected, through its representatives in Parliament, upon the Government.

In future, it will not be sufficient that no question concerning the state policy of other nations is allowed to occupy the attention of our legislature, unless it be first shown that our own honour or our interests are involved in its consideration—it will not be enough that our fleets and armies are not permitted to take a part in the contentions of other nations;—all this will not avail unless our diplomatists and foreign secretaries are jealously restrained from taking a share, either by treaties or protocols, according to the invariable wont of their predecessors, in the ever-varying squabbles of our continental neighbours. By this course of policy, and by this alone, we shall be enabled to reduce our army and

navy more nearly to a level with the corresponding burdens of our American rivals.

May we be allowed, once more, to refute the objection which will be urged, that our numerous fleets are necessary to the defence of our commerce? Then, we ask, does any one deny that the persons of American merchants, or their vessels, are as safe in every quarter of the world as our own? We have seen to how great a proportion of our tonnage the American mercantile navy now amounts; we have seen how vast an export trade they carry on; and we have seen with how small a government force all this is protected:—may not an unanswerable argument, then, be found here, in favour of dispensing, henceforth, with a portion of our enormous naval and military establishments?

Hitherto, whenever a war has at any time been threatened between two or more European states, however remote or however insignificant, it has furnished a sufficient pretence for our statesmen to augment our armaments by sea and by land, in order to assume an imposing attitude, as it is termed; forgetting, all the while, that by maintaining a strict neutrality in these continental brawls, and by diligently pursuing our peaceful industry, whilst our neighbours were exhausting themselves in senseless wars, we might be growing in riches, in proportion as they became poorer; and, since it is by wealth after all that the world is governed, we should, in reality, be the less in danger from the powers on the Continent, the more they indulged in hostilities with each other.

It is a common error with our statesmen to estimate the strength of a nation—as, for instance, is the case at this moment, in their appreciation of the power of Russia, Prussia, or Austria—according to the magnitude of its armies and navies; whereas these are the signs, and, indeed, the causes, of real poverty and weakness in a people.

“Our public debt is cancelled,” said Mr. Benton, a speaker at the dinner lately held at Washington, to celebrate the extinction of the American debt—“our public debt is cancelled; and there is more strength in those words than in one hundred ships of the line ready for battle, or in a hundred thousand armed soldiers.” And, to exemplify the truth of this sentiment, we have subsequently beheld this very people, with only a few schooners and frigates, and seven thousand troops, menacing the French government, *steeped in debt*, at the head of its million of fighting men, and its three hundred vessels of war.

To remove, if possible, for ever the extravagant chimera that haunts the government and people of this country, of our being in danger from any possible combination of continental hostilities, let us suppose, for the sake of argument, that Russia were to invade Turkey—or that France were again to cross the Rhine, having first seized upon Holland and Belgium, and attack Prussia and Austria—or that the Spaniards should seize upon Portugal—or that the Austrian government were to invade Naples or Sardinia—or, if such a supposition be possible, let us imagine these powers to be engaged in a battle-royal all together; now, does any sober and reasoning mind believe that

Great Britain, who, we will presume, had wisely availed herself of the opportunities afforded by her insular position to remain neuter, would be selected by any one of these powers, in addition to the enemies already opposed to it, for the object of gratuitous attack? Does any rational person think that we should, under such circumstances, be in greater jeopardy than the Americans from these contentions?

Having already demonstrated that even Napoleon, with Europe at his feet, was powerless in his attacks upon our exports, we are afraid of being tedious in recurring to that subject.

Were a war once more to break forth over the continent of Europe, and were we to stand aloof from the conflict, our commerce and manufactures, instead of receiving injury in any quarter, would be thereby benefited; for, besides the well-known facilities which a state of warfare would give to the smuggler for supplying those very belligerents themselves with the products of our labour, it would, at the same time, put an end to the competition which we now sustain, in other parts of the world, from our manufacturing rivals of Europe. Germany, France, Switzerland, and Belgium, and indeed almost every nation of the continent, for whose independence and existence we fought so long and arduously, have profited by the peace, to exclude our fabrics from their markets, and, in mistaken policy, borrowed from our own restrictive code, to raise up, at great sacrifices of national wealth, a manufacturing industry for themselves.

Thus we find that, at this moment, Prussia is completing a wall of tariffs, which she has been sedulously

constructing for many years, and which will, more effectually than did Napoleon, exclude us from the German market—Prussia, for whom we bled, and for whose subsidies we are still taxed ! Austria, another of our costly allies, whose disasters our most renowned statesman* would not outlive — Austria has, ever since the peace, sealed her territory against our merchandise. Naples—that unworthy *protegé*, in behalf of whose court England's greatest hero† sullied his otherwise untarnished fame—Naples repays us with an impost of cent. per cent. upon our manufactures ; whilst France has, since Napoleon's fall, been a less profitable customer to England than she was during the time of his extremest enmity towards this country.

True, at the close of the war, our ministers might have stipulated for, and might have commanded a trade with all Europe, as some indemnity for our expenditure ; but the warriors and statesmen who represented us at Vienna, and who took pains to forward such measures as the military occupation of France, or the erection of fortresses in Belgium, or the binding us to become guarantee for the permanency of the union of the Netherlands, forgot to utter one word about our merchants. It was unbecoming the dignity of our gallant and noble plenipotentiaries to stipulate for the welfare of the artisans and manufacturers of Great Britain. Compare this with the results of the cheap diplomacy of the Americans.

* Pitt and Ulm.

† Nelson, Lady Hamilton, Prince Caraccioli.

Alas! by what numberless arts, neglects, and caprices, (to say nothing of crimes,) have the interests of this industrious and greatly favoured people been victimized!

Before closing this pamphlet, we will offer a few remarks as to the course which it behoves Great Britain to pursue, for the future, upon an important question of commercial policy.

With a view to enlarge, as much as possible, the capabilities of this people to support the burden of debt and taxation with which they are destined to be permanently loaded, every possible facility must be given to the increase of population, by the expansion of our foreign trade, and which can only be accomplished by repealing the protective duties on corn.

We shall here be met with the cry, that we are desirous of converting England into one vast manufactory, that we advocate the interests of our order, and so forth. Far from nourishing any such *esprit-de-corps*, our predilections lean altogether in an opposite direction. We were born and bred up amidst the pastoral charms of the south of England, and we confess to so much attachment for the pursuits of our forefathers, (always provided that it be separated from the rick-burnings and pauperism of modern agriculture,) that, had we the casting of the rôle of all the actors on this world's stage, we do not think we should suffer a cotton-mill or a manufactory to have a place in it;—not that they remind us of “*billyrollers*,” “*straps*,” and “*infant martyrdoms*,” for we never saw such; but we think a system which draws children from home, where they

formerly worked in the company of parents, and under the wholesome restraint incident to disparity of years—nature's own moral safeguard of domestic life—to class them in factories, according to equality of age, to be productive of vice. But the factory system, which sprang from the discoveries in machinery, has been adopted in all the civilized nations of the world, and it is in vain for us to think of discountenancing its application to the necessities of this country; it only remains for us to mitigate, as far as possible the evils that are, perhaps, not inseparably connected with this novel social element.

The present corn laws are founded on the principle of limiting, as far as possible, the growth of the population of Britain, within the means of the soil to supply it with subsistence. No candid advocate of a protective duty will deny that it must have this tendency; nor will he dispute, that, to restrict the import of corn into a manufacturing nation, is to strike at the life of its foreign commerce.

It is objected by the landowners of England, that, if the duty on grain were to be reduced, it would operate unfavourably upon their interests, and they claim a protection at the hands of the rest of society. Now, without entering at all into the question of the right which belongs to such pretensions, we shall content ourselves with taking our stand upon the simple ground of necessity, and declare that the people of this country are in an emergency that precludes the possibility of their ministering to the selfishness of any one class in the community.

The interest of the public debt cannot be paid

except by the co-operation of our foreign commerce; and this cannot be preserved permanently, unless the price of that first element of the cost of our manufactures, *food*, be the same here as with our competitors abroad. We are surprised that the question has not before been placed in this point of view by the advocates of a free trade in corn, since it withdraws the subject altogether from that invidious position which it has hitherto held betwixt the rival contentions of agriculture and commerce, and places it under the control of inexorable state necessity.

We have been amazed (if anything could astonish us from this unintelligent party) to find that the national debt is one of the leading arguments made use of, by the economists of the Sadler school, in advocating a restrictive duty on corn. A brief appeal to a very few simple facts will, we believe, not only deprive them of this argument, but, in the opinion of all unprejudiced minds, place it on the opposite side of the question.

Our public debt, funded and unfunded, amounts to about eight hundred millions. Let this sum be more fully appreciated, by bearing in mind that it exceeds the aggregate of all the debts of the whole world, including that of the East India Company, amounting to one hundred and fifty millions. Here, then, we have the British empire, with only its twenty-five millions of population—possessing a territory of only ninety thousand square geographical miles, and containing only forty-five millions of acres of cultivated land, (about two thirds of the area of

France,) supporting an annual burden for the interest of the national debt, equal to the taxation borne, for the same purpose, by all other states. How then can a country, of so confined a boundary, and with no greater population than we have named, find it possible to endure so great a disproportion of taxation? If it be asked, how does France meet her public expenses, we can answer, by pointing to the superabundant production of wine, oil, silk, tobacco, fruit, and corn, yielded throughout an expanse of territory so wide as to insure an almost perpetual harvest to its people. If we inquire, how does Russia maintain her government burdens—the surplus timber, corn, hemp, and tallow of that country must be the reply. Would we know by what resources Italy, Spain, and America discharge their respective national encumbrances—the excess of the produce of silk, oil, fruits, cotton, and tobacco, over and above the wants of the population of those countries, solves the mystery.

But we demand to know, by what means Great Britain can sustain an annual burden, for interest of debt, exceeding that of these and all other states together. Is it out of the surplus production of its corn? Her soil has not, for the last forty years, yielded sufficient to supply the necessities of her population. Is this enormous demand satisfied by the yearly excess of her wines, silk, oil, fruits, cotton, or tobacco? The sterile land and inhospitable climate of Britain are incapable of producing any one of these. Where, then, lies the secret of her wealth?—is it in her colonies? How, if we are prepared to prove that these are at this moment, and, in future,

are still more destined to become, a severe burden to the people of these realms?

Our mineral riches are the means by which alone we have been enabled to incur this debt, and by whose agency only can we at this moment discharge the interest of it.

To satisfy ourselves of this, let us examine the year's return of our revenue, and we shall there discover nearly twenty millions of income under the head of customs duties. How are the commodities, on which this amount of taxation is levied, obtained from foreigners—are they received in exchange for our agricultural produce? By looking over the list of articles exported, we shall, on the contrary, find, that, out of thirty-six millions of home products, not one million is the unmixed growth of the soil.

These commodities are purchased by our cottons, woollens,* hardware, and the other articles produced by the manufacturers of this country; the growth, to use the term, of the coal and iron of Great Britain—which are, we repeat, the primary sources of all her wealth and power, and the want of which alone prevents other nations of Europe from rivalling her in manufacturing greatness. Of course it is known that our agricultural labour supplies a great portion of the food of our weavers and other artisans, and, therefore, mixes with the results of their industry; but when it is recollected that the cost of food here is from fifty to one hundred and fifty per cent. dearer

* We have the testimony of the Leeds manufacturers, in their evidence before the legislature, that foreign wools are absolutely indispensable to our Yorkshire industry.

than in other states, it will be admitted that it is not owing to the cheap price at which the farmer supplies the corn of the manufacturer, that the latter is enabled to undersell his foreign competitors.

To come to the point with those who advocate a restrictive policy on our foreign trade, by a protection, as it is called, of our agriculture, we ask, in what way do they propose ever to pay off the national debt, or permanently to discharge the interest of it, out of the indigenous wealth of these islands?

The whole area of cultivated land in this monarchy, is, as we have before stated, estimated at about forty-five millions of acres: at twenty pounds an acre, the fee simple of the soil of these islands, (we, of course, leave out the houses, &c.,) would very little exceed the amount of our debt. There is an end, therefore, of the idea of discharging the principal out of the real property of the country; and by what means would they who obstruct a foreign commerce, profess to pay the interest of the debt, without the assistance of that trade? Supposing that our exports were diminished, and that, owing to the consequent falling off in our imports, our customs were sensibly reduced, from what articles of our agricultural produce would these advocates of a Japanese policy raise the deficient revenue? In France (where the prohibitive system, which has long reigned supremely, is drawing fast to a dismal end) the customs duties only amount to about one-fifth of our own, and the great bulk of the revenue is levied from the land. But, provided that a reduction of our foreign trade rendered such a step necessary, we ask again, (and it is

an important question, involving the whole gist of our argument,) upon what branch of British agriculture could an augmented impost be levied? May not the recent almost fanatical outcry against the malt tax, the only burden of any magnitude borne directly by the land in this country, serve as a sufficient answer to the inquiry?

The question of the repeal of the corn laws, then, resolves itself into one of absolute state necessity: since our foreign trade, which is indispensable to the payment of the interest of the national debt, cannot be permanently preserved if we persevere in a restrictive duty against the principal article of exchange of rude, unmanufacturing people. To prohibit the import of corn, such as is actually the case at this moment, is to strangle infant commerce in its cradle; nay, worse, it is to destroy it even in its mother's womb.

We recommend the landowners, but especially the great proprietors who constitute the upper house of legislature, to reflect upon this view of the corn laws.

But we have remarked an inclination in a part of the landed interest to slight—to use the mildest possible term—the public creditor; a feeling that shone forth in the motion of the Marquis of Chandos to remove the malt tax—thus aiming at the insolvency of the Chancellor of the Exchequer—without caring first to inquire by what fresh imposts he should meet the engagements of his country. These unreflecting minds are, we apprehend, quite incapable of estimating the consequences that will ensue if ever we

should be found unable to meet the interest of the debt—in other words, if the British nation should be declared bankrupt! Let us, for one moment, contemplate the results that would follow from such an event.

We find, from a statement in “Porter’s Official Tables,” that there are 250,000 persons receiving dividends, of and under the amount of £200 a-year. Presuming the families or dependents of them to average* two each, then we shall have here half a million of individuals looking to the public funds for support. Moreover, we find the total amount of the deposits in all the savings’ banks of the kingdom, to be £13,500,000; and the number of depositors, according to the same authority, is 412,217, averaging £33 each: taking the families or dependents of these at the same average as before, and it gives three quarters of a million more. Then there is an immense amount of the public debt owing to charities,—including insurance offices, benefit clubs, schools, &c., involving the interests of an incalculable multitude of necessitous persons. Guessing these to amount to only the same total as the last mentioned, (for it is impossible to form a correct estimate on the subject,) then we arrive at an aggregate of two millions of the middle and lower classes, who are, directly or indirectly, claimants on the national debt.

Now, no one capable of thinking upon such a subject at all, will, for a moment, believe that, if we were driven to such an extremity as to rob these two

* To avoid exaggeration, we have named a lower average than we are entitled to quote.

millions—comprising so many of the labourers, the small traders, the orphans and widows—of their subsistence, that the pomp of the court, or the wealth of the clergy, or the privileges of our nobles, would be more secure than the bread of these humble annuitants.

No rational mind can suppose that lords in waiting, grooms of the stole, gold sticks and silver sticks, would be maintained—that bishops and prebends would still be found in undisturbed possession of their stalls and revenues—or that the peers would retain their law of primogeniture, or the right of hereditary legislation, whilst desolation and misery overspread the land with horrors as terrible as any it could undergo from the ravages of half a million of Cossacks.*

The cleverest of our journalists has said—and the words have passed into a proverb—“Before you rob the public creditor, send your throne to the pawn shop.” And nothing can be more certain than that the national debt (which never ought to have been incurred, and the authors of which some future generation will, probably, deem to have been madmen) must be borne by the people of England, entire and untouched, so long as they can stand beneath its burden. If ever the day should come that sees this

* Here let us remark, in reference to the absurdest of all absurd chimeras with which we haunt ourselves, of this empire being in danger from the assaults of Russia—that we are convinced there is, at this moment, ten thousand times more cause of apprehension from the financial evils of Great Britain, than from all the powers of the world.

mighty fabric crush the nation to the dust, it will bury in its ruins the monarchy, church, and aristocracy, with every vestige of our feudal institutions, and every ancestral precedent—leaving the state, like Mr. Courtenay's sheet of blank paper, upon which the then existing generation will have the task of inscribing a new constitution, borrowed from the freest and most flourishing community of that day, and which, in all probability, will be found on the continent of America.

From such a catastrophe there is no escape, but in either honestly paying off the principal of the public debt, or in continuing to discharge the interest of it for ever. The ravings after an equitable adjustment, and other like expedients, are but the impracticable schemes of those who would wish to precipitate such a calamity as we have been describing.

If every house in England were converted into a Court of Chancery, and if all the men between twenty and sixty were constituted Lord Chancellors, there would not then be a sufficient quantity of equity courts and equity judges to effect such an equitable adjustment of the national debt as is meant, during the lifetime of an entire generation.

The national debt, then, is inviolable; and this recalls us to the inquiry of how it is to be permanently supported; which brings us again to the question of the corn laws.

The only way in which we can lighten the pressure of the debt, is by adding to the population and wealth of the country. The agricultural districts have, we suspect—so far as the middle classes are concerned—

already experienced that dull state incident to the stationary period of society; whilst, under the present amended poor laws, we believe that the further increase of the pauper population will be effectually checked. The sole way, then, of adding to our numbers, is to give the freest possible development to the only present superabundant contents of the soil—the mineral products of Great Britain.

By repealing the present corn laws, and putting only a fixed duty of such an amount as would bring the greatest revenue (we object no more to a tax on corn than on tea or sugar, for the purpose of revenue,* but we oppose a *protective* duty, as it is called,) which, probably, might be found to be two shillings a-quarter, such an impulse would be given to the manufactures of this country, whilst so great a shock would be experienced by our rivals, from the augmented price of food all over the world, that a rapid growth of wealth and increase of numbers must take place throughout the coal and iron districts of England, Wales, and Scotland.

The population of Staffordshire, Lancashire, Yorkshire, Lanarkshire, and of counties adjacent to these, might be trebled in the course of a couple of generations; and there would be no limit to its increase but in the contents of our coal mines, to which geologists assign a duration varying from two to three thousand years!

It will be asked, what would be the effects of such a change upon the agriculture of the country? The

* [Mr. Cobden soon afterwards acknowledged his error. See Prentice's History of the League. Vol. I. p. 194.]

best way of replying to this question is, to consider what must have been the consequence to all interests in this country, if, in lieu of the restrictions put upon the import of corn in 1816, a law had been passed, imposing only such a moderate duty as would ultimately produce the greatest revenue, and which, in our opinion, would be found to be two shillings a quarter. The factory system would, in all probability, not have taken place in America or Germany;—it most certainly could not have flourished, as it has done, both in those states, and in France, Belgium, and Switzerland, through the fostering bounties which the high-priced food of the British artisan has offered to the cheaper fed manufacturer of those countries.

Our belief, after some reflection upon this question, is, (having already very far exceeded the intended limits of this pamphlet, we are precluded from going into details,) that, had a wise modification of our corn laws been effected at the close of the war, the official value of our exports would have exceeded, by one-third, its present amount. This is, of course, presuming that our manufacturing population had augmented proportionately;—we believe that, under such circumstances, the before-mentioned counties would have now sustained upwards of a million more than their present numbers; but, as the increase of their inhabitants would not have been equal to the demand for labour, a great immigration must have taken place from the agricultural districts. This would have saved those quarters that frightful ordeal of pauperism and crime with which they have disgraced our modern history. The farmer would,

by the offer of other resources for his family and dependents, have been saved from the state of servility into which he is plunged. Instead of the rent of the tenants being dictated by the landlords, the former would, under this more favourable state of things, have been the arbiters of the incomes of the latter. In short, the buyers—*i.e.* the farmers—would, in this case, as the purchasers do in dealing with all other commodities, have decided the prices of their farms—they would not have been, as at present, determined by the sellers, *i.e.* the landowners.

Under such an assumed state of things, this country would, we believe, by this time, have acquired an increase to its present wealth, to the extent of 350* millions—nearly one-half the amount of the national debt.

The immediate effects of all this to the landed proprietor would, clearly, have been a reduction of rent; or where the property was heavily encumbered, his estates would have passed into other hands.

We should not, in such a case, have heard of those displays of wanton extravagance that tend so much to demoralize all classes. Instead of the exhibitions of prodigality and insolence abroad, with which some of those proprietors affronted the nations of the continent, and disgraced at the same time their native country—instead of their contributing, at home, to raise and support a palace for Crockford—instead of their dispensing with all decorum, and herding with

* It is estimated that our annual loss on corn alone is nine millions.

grooms and black-legs at Newmarket or Doncaster—instead of the necessary consequences of all this, the subsequent ruin and exile of such wastrels*—in place of these things, we might have beheld a provident and virtuous proprietary residing principally upon and managing their estates; and who, we verily believe, would, under this supposed state of things, have become richer in wealth, as well as honour, than they are at this day.

But selfishness, which is ever short-sighted, has hitherto governed supremely the destinies of this empire; and we have seen how disastrous has been its rule, not only to its own interests, but to the prosperity of the nation at large. Should the same misgovernment, from no better motives, be persevered in, with respect to the corn question, the effects will be still more calamitous for the future. The public debt, that “eternal ally of truth and justice,” (to use the words of a famous political writer, without adopting his malignancy,) will visit with terrible reprisals the monopolists who shall persist in upholding the present corn laws.

We cannot do better than conclude with the words of an intelligent American, as they were addressed to an English traveller. The extract is taken from the preface to “Ferguson’s Tour in Canada and a portion of the United States.”

“Even with your present burden of debt, if your government were to renounce all interference with the affairs of the continent, and keep no more force,

* *Wastrel*, in Lancashire phrase, an idle, debauched, and worthless spendthrift—a word that may be useful in London.

land or naval, than is necessary for your own security, have no more wars, and diminish the expenditure as much as possible, you would grow so rapidly in the next fifty years, that your debt would cease to be of any importance. I earnestly hope that the passage of the Reform Bill may be only the prelude to an entire change of system; and that your successors may feel, as we do here, that wars do not promote the prosperity of a nation, and have the good sense to avoid them."

“ It is an identity of language, habits, and character, and not of the soil or the name of a master, which constitutes a great and powerful nation.”

MALTE-BRUN.

ADVERTISEMENT.

THIS is not a party pamphlet. Nor will Russia be found, as the title might seem to imply, to be exclusively the subject of inquiry in the following pages. If, as has lately been shewn in England, at certain periods in the history of a nation, it becomes necessary to review its principles of domestic policy, for the purpose of adapting the government to the changing and improving condition of its people—it must be equally the part of a wise community to alter the maxims by which its foreign relations have, in past times, been regulated, in conformity with the changes that have taken place over the entire globe.

Can the “States’ System” which was applicable to the international affairs of Europe a century ago, be suited to the circumstances of to-day?—or, on the contrary, do not those portentous events which have intervened—in the rise and paramount commercial importance of free America, the downfall of the colony system, and the application of the doctrines of free-trade—demand reforms of proportionate magnitude in the foreign policy of Great Britain? These important changes have, in the latter part of this pamphlet, for the first time, been taken into consideration with reference to the question of Turkey : and, without presuming, for a moment, to claim for our mode of treating this important subject the slightest attention, we may be allowed to add, that the mighty influence which such changes are now exercising over our destinies, ought to be duly studied and appreciated by those who, as statesmen, are permitted to regulate the external affairs of this commercial empire.

NOTE.

THIS pamphlet, which was published in the year 1836, was suggested by the alarm of a Russian invasion, which prevailed in that year, and which led to an increase in our navy of five thousand men. Although the views of what is now known as the "Eastern Question," which Mr. Cobden has embodied in the following pages, correspond with those to which he and his distinguished friend, Mr. Bright, gave such forcible and eloquent expression during the war with Russia, it is scarcely too much to say, that political students generally will peruse the pamphlet with as much zest as if it were now for the first time issued from the press; and, indeed, the arguments and illustrations by which Mr. Cobden sought to controvert the popular apprehension of Russian power and ambition which then existed, have a close bearing upon more recent phases of public opinion. But at the time Mr. Cobden wrote he had to contend with traditional illusions, which not only inspired large classes of the community with an alarm as mischievous as it was vague and unreal, but formed a no unimportant part of the political creed of statesmen.

The reader can judge of the manner in which Mr. Cobden acquitted himself of his arduous task; but an authentic anecdote will best illustrate the effect which the perusal of his work produced on the minds of public men, who, from the eminent position they occupied thirty years ago, were best qualified to form

a critical opinion on its merits. Shortly after the publication of the pamphlet Lord Durham, who was then the English ambassador at St. Petersburg, received a copy of it in his official bag. He read it, and was so much impressed with the clearness and force of its leading ideas, that he at once wrote to his friend, the late lamented Mr. Joseph Parkes, and requested him to discover the name of the author. Mr. Parkes obtained Mr. Cobden's permission to mention his name; and when, two years later, his Lordship returned to England, he desired Mr. Parkes to bring about a meeting between himself and Mr. Cobden. The result was that Mr. Cobden dined with Lord Durham, who, after an evening of friendly conversation, was still more struck with his new acquaintance. His subsequent prophetic and sagacious remark to Mr. Parkes deserves to be recorded. "Mark my words," he said, "Cobden will one day be one of the first men in England."

It only remains to add that Mr. Cobden made a tour through Turkey and the East in the year following the publication of his brochure, but that he did not visit Russia until the year 1846, when the abolition of the corn laws enabled him at once to recruit his health, and to disseminate free trade principles in other countries, by a few months of continental travel.

CHAPTER I.

RUSSIA, TURKEY, AND ENGLAND.

CONTENTS.—Persevering Efforts of an Individual to rouse the People of Britain in favour of Turkey and against Russia.—Protest against any Wish to Palliate the Violence and Aggression of Russia.—Peace and Non-Intervention the Writer's sole Object.—Character of the Turkish Government—Contrasted with that of Russia.—Consequences to Humanity and Civilization of the Occupation of Constantinople by the Russians.—Absurd Apprehension of Injury to our Trade from the Greatness of Russia.—National Wealth the true Source of National Power; not Extent of Territory.—Immense Power of the Manufacturing Districts of England.—Lord Dudley Stuart's and Mr. T. Attwood's Indiscreet Zeal for British Interference with Russia.—State of the Caucasian Tribes—The Georgians, Circassians, &c.—Condition of Wallachia and Moldavia—Persia—The Crimea—Finland.

It has been somewhere remarked, that, in former times, some false alarms usually preceded or accompanied a new war. Thus, in 1792, Mr. Saunderson, then Lord Mayor, and soon afterwards made a Baronet, got up in his place in the House of Commons, and declared that he knew of a plot to surprise the Tower of London: all England was thrown into a fear of the Jacobins, and the anti-Jacobin war soon afterwards followed; but of the conspiracy to seize the Tower, not another word was heard. Again, at

the close of the short peace, or, more properly speaking, the *truce* of Amiens, it was alleged, in all the public prints, and subsequently inserted in the declaration of war, that Bonaparte had armies ready to invade England; and, in proof, it was adduced that instructions had been given to the French diplomatic and commercial agents to take surveys and soundings of our coasts and harbours.* The people, thus deluded into an anti-Bonaparte war, forgot that many different surveys of every part of our coast, and of every harbour in the British dominions, might have been purchased for a few shillings at every hydrographer's or chart-seller's; and that no foreigner, by years of study, could have added an iota to the information contained in the various pilot books then used in the different channels. We live in other times: but still the constitution of our government, which gives to the Court the power of declaring war, and to the Commons the privilege of providing for its expenses, remains the same; and, however we may be verging upon a more secure era, we confess we

* "When once Persia fell under the yoke of Russia, one great obstacle to the acquirement of that which constituted our possessions in the east would be removed. He hoped that its success would be impossible—it was at least problematical; but this, at all events, was in no degree doubtful, that the matter was very seriously entertained at St. Petersburg. *In the war-office there, maps and plans, drawn expressly for the purpose, were deposited, shewing not only the practicability of such a scheme of aggrandizement, but the various modes in which it might be best carried into effect, and the way the several military stations, necessary for the purpose, might be established.*"—Lord Dudley Stuart's Speech, House of Commons, Feb. 19, 1836.

think there is sufficient ground in the predominant influence which an aristocracy, essentially warlike, exercises at this moment in the Ministry, to warn our readers and the public against the passion for a foolish war, with which the minds of the people have been latterly very industriously inflamed. We do not charge the noble Lords who form the great majority in the Cabinet with a design to stimulate the country to demand hostilities with Russia: the policy of the Ministry may probably have stopped far short of that, and aimed only at accomplishing an augmentation of the army or navy. Certain it is, however, that *one active mind** has, during the last two years, materially influenced the tone of several of the newspapers of this kingdom, in reference to the affairs of Russia and Turkey, and incessantly roused public opinion, through every accessible channel of the periodical press, against the former and in favour of the latter nation; certain it is, moreover, that this individual, if not previously an agent of the Government, has latterly become so, by being appointed to a diplomatic post in our embassy at Constantinople.† How far this indefatigable spirit has been successful in his design to diffuse a feeling of terror and a spirit of hatred towards Russia in the public mind, may be ascertained by any one who will take the trouble to sound the opinions of his next neighbour upon the subject, whom, it is ten to one, he will find an alarmist about the subtlety of Pozzo di Borgo, the cruelty of the Czar, and the barbarism of the Russians. He

* [Mr. David Urquhart.]

† We state these facts from personal knowledge.

most likely will find him to possess but vague feelings of apprehension, and very little exactness of knowledge upon the subject; he will not know, perhaps, precisely, whether the province of Moldavia be on the right or the left bank of the Danube, or whether the Balkan and the ancient Hæmus be an identical range of mountains; he will have but an indistinct acquaintance with the geography of Asia Minor, and probably confound the Bosphorus with the Dardanelles: but still he shall be profoundly alarmed at the encroachments of Russia in those quarters, and quite willing to go to war to prevent them. Such, we gravely assert, is the feeling, and such are the opinions of the great majority of those who take their doctrines from some of the newspapers at this moment, upon the question of Russian aggrandizement. Believing that the fate of Turkey, and the designs of her great northern neighbour, are by no means matters that affect the interests of England so vitally as some writers imagine, we are yet more directly opposed to them, by entertaining a conviction that, even if the worst of their forebodings were to arrive—if even Russia were to subjugate Turkey—England would gain rather than suffer by the event. In order to state our views fairly upon this interesting and difficult question, it will be necessary for us to glance, hastily, at the past history and the present condition, as respects the government and resources, of the two empires; and then; having assumed that Turkey had fallen a prey to the ambition of Russia, we will weigh the probable consequences of, and meet the possible objections to, such an event.

But, before entering upon our task, we would disavow all intention of advocating the cause of Russian violence and aggression. It can only be necessary to say thus much at the outset of this pamphlet, in order to prevent the reader from anticipating our design with an undue prepossession respecting our motives; for the whole spirit and purpose of the following pages will shew that we are hostile to the government of St. Petersburg, and to every principle of its foreign and domestic policy. Our sympathies flow, altogether, towards those free institutions which are favourable to the peace, wealth, education, and happiness of mankind.

In comparing the Turkish government with that of Russia, however, it will be found that the latter is immeasurably the superior in its laws and institutions; and if, in the remarks which we shall have occasion to make, we should appear to bestow commendations upon that northern people, we entreat that the reader will consider us to be only speaking in comparison with its more barbarous and despotic Mahometan neighbour, and not from any abstract predilection in favour of the Russian nation. Again, whilst we argue that we should, in all probability, benefit by the subjugation of Turkey by Russia, we do not attempt to justify, or even to palliate, the forcible spoliation of its territory: still less do we advocate the intervention of the English government, for the purpose of promoting such a conquest. Our sole object is to persuade the public that the wisest policy for England is, to take no part in those remote quarrels. To accomplish this end, we will endeavour to

examine every distinct source of danger which the advocates for our interference in the affairs of states a thousand miles distant, adduce as arguments in defence of their policy. We shall claim the right of putting the question entirely upon a footing of self-interest. We do not, for a moment, imagine that it is necessary for us to shew that we are not called upon to preserve the peace and good order of the entire world. Indeed, those writers and speakers who argue in favour of our intervention in the affairs of Russia and Turkey, invariably do so upon the pretence that our commerce, our colonies, or our national existence, are endangered by the encroachments of the former empire. We trust the futility of such fears will be shewn by the following appeal to reason, experience, and facts.

The Turks, a race of the Tartars of Asia, conquered Constantinople in 1453. In the succeeding century, this people struck terror into all Europe by their conquests. They subdued Egypt, the Barbary States, and all the Arabian coasts on the Red Sea. In Europe, they conquered the Crimea and the countries along the Danube; they overran Hungary and Transylvania, and repeatedly laid siege to Vienna. At sea, notwithstanding the gallant resistance of the Venetians, they subdued Rhodes, Cyprus, and all the Greek islands. Down to our own time, the Turks governed a territory so vast and fertile that, in ancient ages, it comprised Egypt, Phœnicia, Syria, Greece, Carthage, Thrace, Pontus, Bithynia, Cappadocia, Epirus, and Armenia, besides other less renowned empires. From three of these states went forth, at various epochs, conquerors who vanquished and subjected the then

entire known world. The present lamentable condition of this fine territory, so renowned in former times, arises from no change in the seasons, or defalcation of nature. It still stretches from 34 to 48 deg. north, within the temperate zone, and upon the same parallels of latitudes as Spain, France, and all the best portion of the United States. "Mount Hæmus," says Malte Brun, "is still covered with verdant forests; the plains of Thrace, Macedonia, and Thessaly yield abundant and easy harvests to the husbandman; a thousand ports and a thousand gulfs are observed on the coasts, peninsulas, and islands. The calm billows of these tranquil seas still bathe the base of mountains covered with vines and olive trees. But the populous and numerous towns mentioned by ancient writers have been changed into deserts beneath a despotic government." All the authorities upon this country assure us that the soil of many parts of Turkey is more fruitful than the richest plains of Sicily. When grazed by the rudest plough, it yields a more abundant harvest than the finest fields between the Eure and the Loire, the granary of France. Mines of silver, copper, and iron are still existing, and salt abounds in the country. Cotton, tobacco, and silk might be made the staple exports of this region, and their culture admits of almost unlimited extension throughout the Turkish territory; whilst some of the native wines are equal to those of Burgundy. Almost every species of tree flourishes in European Turkey. The heights of the Danube are clad with apple, pine, cherry, and apricot trees; whole forests of these may be seen in Wallachia; and they cover the hills of

Thrace, Macedonia, and Epirus. The olive, orange, mastic, fig, pomegranate—the laurel, myrtle, and nearly all the beautiful and aromatic shrubs and plants—are natural to this soil. Nor are the animal productions less valuable than those of vegetable life. The finest horses have been drawn from this quarter, to improve the breeds of Western Europe; and the rich pastures of European Turkey are, probably, the best adapted in the world for rearing the largest growths of cattle and sheep.

That, in a region so highly favoured, the population should have retrograded, whilst surrounded by abundance; that its wealth and industry should have been annihilated; and that commerce should be banished from those rivers and harbours that first called it into existence—must be accounted for by remembering that the finest soil, the most genial climate, or the brightest intellectual and physical gifts of human nature, are as nothing, when subjected to the benumbing influences of the government of Constantinople. It is necessary to refer to the religion and the maxims of its professors, which constitute all that serves as a substitute for law with this Mahometan people, if we would know the causes why ignorance, barbarism, and poverty, now overspread the fairest lands of Asia and Europe. The Turks profess, as is well known, the most bigoted and intolerant branch of the Mahometan faith; they regard with equal detestation the Persian Shiite and the follower of Christ; nay, the more zealous amongst their doctors contend that it is as meritorious to slay one Shiite as twenty Christians. Their colleges, or madresses,

teach nothing but the Mahometan theology; many years being spent in mastering such knotty points as, *whether the feet should be washed at rising, or only rubbed with the dry hand.* As the orthodox Turk, of whatever rank, is taught to despise all other fields of learning than the Koran, under the belief that Mahomet has, in that sacred book, recorded all that his faithful followers are required to know—it follows, of course, that he is religiously ignorant of all that forms the education of a Frenchman, German, or Italian; he knows nothing of the countries beyond the bounds of the Sultan's dominions. The Turks (unlike the liberal Persians, who have made some advances in science) are unacquainted with the uses of the commonest scientific instruments, which are exhibited to them by travellers just as we do to amuse children. Notwithstanding that this people have been for nearly four centuries in absolute possession of all the noblest remains of ancient art, they have evinced no taste for architecture or sculpture, whilst painting and music are equally unknown to them. Nor have they been less careless about the preservation of ancient, than the creation of modern works of labour and ingenuity. They found, at the conquest of the eastern empire, splendid and substantial public and private edifices, which have been barbarously destroyed, or allowed to crumble beneath the hand of time; and huts of wood, compared by travellers to large boxes* standing in rows with their lids open upon hinges, compose the streets of modern Constantinople, and other large cities. Bridges, aqueducts, and harbours, the precious

* Willis—"Pencillings by the Way."

and durable donations of remote yet more enlightened generations, have all suffered a like fate; and the roads, even in the vicinity of the capital, which in former ages maintained an unrivalled celebrity, are described, by the last tourist,* to be now in so broken and neglected a state as to present a barrier against the progress of artillery as complete as though it had been designed by an engineer for that purpose.

The cause of all this decay is ascribed to the genius of the Turkish government—a fierce, unmitigated, military despotism—allied with the fanaticism of a brutalizing religion, which teaches its followers to rely solely on the sword, and to disdain all improvement and labour. The Sultan, who is the vicegerent of the Prophet, holds both temporal and spiritual authority over his followers; and this enables him to sway the lives and destinies of the people, with an absoluteness greater than was ever enjoyed by any tyrant of ancient times; unchecked, too, by the growth of cities, the increase of knowledge, or the accumulation of wealth—all which are alike incompatible with the present government of the country. Every man, who is invested with absolute power, is at liberty to delegate his power unimpaired to another: the Sultan is the vicegerent of the Prophet; every Pasha is a representative of the Sultan; and every soldier who carries an order, the representative of the Pasha. The situations of Pasha and Cadi, or judge, are all given to the highest bidders, who are removeable at will, and, of course, take care to indemnify themselves at the expense of the governed.

* Quin—"Voyage down the Danube."

“It is a fact of public notoriety,” says Thornton,* “that governments of every description are openly sold at the Porte; they are held for the term of one year only, and, at the ensuing *bairam*, the leases must be renewed or transferred to a less parsimonious competitor. In the public registers, the precise value of every important post under government is recorded; and the regular remittance of the taxes and tribute is the only acknowledged criterion of upright administration.” It is a fundamental principle that all the property conquered by the Turks belongs to the Sultan. Hence the Christians are accounted the slaves of the conqueror, and they are only allowed to live by paying a heavy tribute, the receipt for which bears that it is the ransom of their heads!

Probably, in nothing has this people been more unduly represented than in the praises which have been bestowed on their unrestricted principles of trade. The Turk knows nothing, and cares as little, about freedom of commerce; he disdains trade himself, and despises it in others; and, if he has failed to imitate more civilised (though, certainly, in this point of view, not wiser) nations, by fortifying his coasts with custom-houses, it is certainly from no wise principle of taxation, but simply because such a circuitous method of fiscal exaction would be far too complicated and wearisome for the minds of Ottoman governors, who prefer the simpler mode of raising a revenue by the direct extortion of the Pasha or the Aga. Far from favouring the extension of commerce, one great cause of the present barbarism and the past

* “Present State of Turkey.”

unhappy condition of Turkey, is to be found in the aversion and contempt which its people bear for trade. "The Jews," says Hadji-Khalfa, the Turkish writer, in speaking of Salonica, "employ many workmen in their different manufactories—support a number of schools, in which there are not fewer than two hundred masters. The caravans that travel from Salonica to Semlin, Vienna, and Leipsig, are loaded with cotton, tobacco, carpets, and leather. It is a shame," continues the orthodox Hadji-Khalfa, "that so many Jews are allowed to remain in Salonica; the excitement thus given to trade is apt to blind true believers." The fate of those vast and rich tracts bordering upon the Black Sea and its tributary rivers, affords ample proof that the genius of Mahometanism is inimical to the interests of commerce and agriculture. The trade carried on by the ancients upon the shores of the Euxine, was very considerable, and gave life and wealth to several populous cities mentioned in history. In more modern times the Genoese formed establishments upon the coasts of the Black Sea, and they took the lead in navigating those waters down to the fifteenth century. At the taking of Constantinople, the Turks closed the Black Sea against the ships of Europe; and from that time its navigation was lost to the commerce of the world for a period of more than three centuries.

By the treaty of Kanardgi, in 1774, the ships of Russia were allowed to pass the Bosphorus; other countries soon afterwards obtained similar privileges; some restrictions, which it was still attempted to keep up, were removed by the treaty between the

Russians and Turks in 1829; and the Black Sea is now, for commercial purposes, as open as the Mediterranean. The importance of this vast extension of commercial navigation cannot, at present, be fully appreciated, owing to the unfortunate condition of the population which inhabits those regions. Some idea may, however, be formed of the extent and probable importance of those great rivers which fall into the Black Sea, by the following estimate furnished by Malte Brun:—

If all the rivers in Europe be as	1.000
Those which flow into the Black Sea,	0.273
„ „ Mediterranean,	0.144

Of all the features belonging to the Turkish national character, there is none less favourable than that which relates to the neglect and contempt with which that people has invariably treated affairs of trade. Whether it be owing to that dogma of their creed which forbids the receiving interest for money, or to that other familiar text of the Koran, which says, “There is but one law, and that forbids all communication with infidels;” certain it is that such an example as a Turkish merchant transacting matters of commerce with a foreign trader, was scarcely ever known in that country. This is an anomaly the more striking, when we refer to other countries, less advantageously situated, as, for instance, China, where trade has acquired an importance, and is conducted on a system the growth of ages of good government, and of a like period of patient industry in the people. Nothing but a tyrannical despotism, at once sanguinary and lawless, could have had the

effect of repelling commerce from the superb harbour of Constantinople; but, alas! the thousand ships which might find secure anchorage there, would seek in vain for the rich freights of silk, cotton, and wool, which ought to await their coming: such is the character of its people and rulers, that no native capitalists have ever been emboldened to accumulate a store of merchandise to tempt the rapacity of the Sultan; and vessels which trade to Constantinople have frequently occasion to go to Salonica, Smyrna, or some other port, for return cargoes.

Before we turn away from this hasty and assuredly not very pleasing glance at the Ottoman nation, it would be uncandid if we omitted to notice the imputed virtues of the Turks; foremost amongst which stands charity—a quality enjoined to all true believers by the words of Mahomet, and which includes within its operation the inferior animals. They are reputed to be honourable in their dealings, and faithful to their words—characteristics of the haughty masters, as lying and chicane are natural to the slave. The Turks are forbidden the use of wine; but then they console themselves by substituting the eternal coffee, tobacco, and opium, and by other sensual indulgences.

“We turn,” in the words of a great writer, “from the soil of barbarism and the crescent, to a country whose inhabitants participate in the blessings of Christianity and European civilization.”

Russia comprises one half of Europe, one-third of Asia, and a portion of America; and includes within its bounds nearly sixty millions, or a sixteenth por-

tion of the human race. Its territory stretches, in length, from the Black Sea to the confines of Upper Canada; and from the border of China to the Arctic Sea, in width. The stupendous size of the Russian empire has excited the wonder and alarm of timid writers, who forget, that "it is an identity of language, habits, and character, and not the soil or the name of a master, which constitutes a great and powerful nation." Ruling over eighty different nations or tribes, the autocrat of all the Russias claims the allegiance of people of every variety of race, tongue, and religion. Were it possible to transport to one common centre of his empire, the gay opera lounge of St. Petersburg, habited in the Parisian mode; the fierce Bashkir of the Ural Mountain, clad in rude armour, and armed with bow and arrows; the Crimean, with his camel, from the southern steppes; and the Esquimaux, who traverses with his dogs the frozen regions of the north—these fellow-subjects of one potentate, would encounter each other with all the surprise and ignorance of individuals meeting from England, China, Peru, and New Holland; *nor would the time or expense incurred in the journey be greater in the latter than the former interview.* It must be obvious to every reflecting mind that vast deductions must be made from the written and statistical resources of a nation possessing no unison of religious or political feeling, when put in competition with other empires, identified in faith, language, and national characteristics. The popular mind has been, however, greatly misled by many writers on the Russian empire, who have sought to impress their

readers with the idea of the overwhelming size of its territory, and who have, at the same time, wilfully or negligently omitted to mention other facts, which, if taken in connection, serve to render that very magnitude of surface a source of weakness rather than power. We are furnished by Malte Brun with some tables of the relative densities of the population of the European empires, which will help to illustrate our views upon this subject, and from which we give an extract:—

	Inhabitants.
Russia, for each square league,	181
Prussia,	792
France,	1063
England,	1457

Now, the same law applies to communities as to physics—in proportion as you condense you strengthen, and as you draw out you weaken bodies; and, according to this rule, the above table, which makes Prussia more than four times as closely peopled as Russia, would, bearing in mind the advantages of her denser population, give to the former power an equality of might with her unwieldy neighbour, which we have no doubt, is quite consistent with the truth; whilst the same tabular test, if applied to Russia, France, and England, would assign much the greater share of power to the two latter nations; which experience has demonstrated to be the fact. Here, then, we have the means of exemplifying, by a very simple appeal to figures, (ever the best reasoning weapons,) how the vastness of territory of the Russians is the cause of debility rather than of strength. It would be a trite illustration of a self-evident truism

if we were to adduce, as a proof of our argument, the practice in military tactics. What general ever dreamed of scattering his troops, by way of increasing their power? Bonaparte gained his terrible battles by manœuvring great masses of men in smaller limits than any preceding commanders.

But the same geographer supplies us with a graduated scale of the relative taxation of these countries, which affords a yet more convincing proof of the disadvantageous position of Russia.

Russia, each inhabitant contributes to						
government,	.	.	.	.	.	£0 11 8
Prussia,	.	.	.	.	.	0 17 6
France,	.	.	.	.	.	1 8 4
England,	.	.	.	.	.	3 13 4

Now, assuming, as we may safely do, that these governments draw the utmost possible revenue from their subjects, what a disproportion here is between the wealth of the closely-peopled Britain and the poverty of the scantily populated Russia! We find, too, that the gradation of wealth is in the direct proportion to the density of the inhabitants of the four countries. Here, then, we have a double source of weakness for Russia, which would operate in a duplicate ratio to her disadvantage, in case that nation were plunged into a war with either of those other states; for, whilst her armies must necessarily be mustered from greater distances, at proportionate cost, and with less ability on her part to bear those charges, her rivals would possess troops more compactly positioned, and, at the same time, the greater means of transporting them:—in a word, the one

party would require the funds, and not possess them, whilst the other would, comparatively speaking, have the money, and not want it. A necessary evil attends the wide-spread character of the population of Russia, in the absence of those large towns which serve as centres of intelligence and nurses of civilization in other countries. Thus, in those vast regions, we have the cities of

Petersburgh, with a population of		305,000
Moscow,		190,000
Warsaw,		117,000
Kasan,		50,000
Kiow,		40,000

whilst we find the remainder of the large places on the map of Russia to be only, in size, upon a par with the third-rate towns of England. That in a country of such vast extent, and comprising sixty millions of people, and where so few populous cities exist, the great mass of the inhabitants are living in poverty, ignorance, and barbarism, scarcely rising above a state of nature, must be apparent. Tribes of Cossacks and of Tartars, wandering over the low countries of Caucasia, own a formal allegiance to Russia. Other hordes, dignified by the alarmist writers on the subject of Russian greatness, with the title of *nations*—such as the Circassians, the Georgians, the Mingrelians, with more than thirty other tribes, some Christian, others Mahometan, or of a mixed creed, occupying the mountainous regions of the Caucasus—are wholly or partially subdued to the dominion of the Czar. These fierce tribes are addicted to all the rude habits of savages; they live by

the chase, or the cultivation of a little millet; they commit barbarous outrages, and buy and sell each other for slaves—often disposing of their own children, brothers, and sisters, to the Turks. Against these refractory and half-subdued neighbours, the Russians are compelled to keep fortresses along the frontier.

If we pass to northern Russia, we find the Samoi-edes, a people enduring nearly six months of perpetual night, and enjoying, in requital, a day of two months; with them, corn is sown, ripened, and reaped, in sixty days. In the governments of Wologda, Archangel, and Olonetz, (for even in this almost uninhabitable region man has established his ministerial arrangements and political divisions,) the climate is of such a nature that human industry can hardly contend against the elements, and the scanty produce of his labour enables the husbandman scarcely to protract a painful and sometimes precarious existence. Trees disappear on the sterile plains—the plants are stunted—corn withers—the marshy meadows are covered with rushes and mosses—and the whole of vegetable nature proclaims the vicinity of the Pole.

Over these desolate wastes, a traveller might journey five hundred miles, and not encounter one solitary human habitation. The government or province of Orenburg, is larger than the entire kingdom of Prussia, and yet contains only a population of one million souls!

There are, however, vast districts—as, for example, the whole of Little Russia, and the Ukraine—of fer-

tile territory, equal in richness to any part of Europe ; and it has been estimated that Russia contains more than 750,000 square miles of land, of a quality not inferior to the best portions of Germany, and upon which a population of two hundred millions of people might find subsistence. Here, then, is the field upon which the energies of the government and the industry of its subjects should be, for the next century, exclusively devoted ; and if the best interests of Russia were understood—or if its government would attain to that actual power which ignorant writers proclaim for it in the possession of boundless wastes and impenetrable forests—she should cease the wars of the sword, and begin the battle with the wilderness, by constructing railroads, building bridges, deepening rivers ; by fostering the accumulation of capital, the growth of cities, and the increase of civilization and freedom. *These are the only sources of power and wealth in an age of improvement ;* and until Russia, like America, draws from her plains, mountains, and rivers, those resources which can be developed only by patient labour—vain are her boasts of geographical extent. As well might the inhabitants of the United States vaunt of their unexplored possessions west of the Rocky Mountains, or England plume herself upon the desert tracts of New Holland.

If such be the true interests of Russia, it will be admitted, then, that the conquest of those extensive and almost depopulated regions now withering under the government of the Sultan, would only be a wider departure from this enlightened policy. Assuming

that such a conquest had taken place, it follows that the population of the Russian empire would become still more diversified in character and of a yet more heterogeneous nature; whilst it, at the same time, would diffuse itself over a far wider surface of territory; and, if the arguments which we have offered are founded in reason, then the first effects of all this must be, that Russia would, herself, be weakened by this still greater distension of her dominion. What, then, becomes of our apprehensions about the safety of India, or the possession of the Ionian Islands—the freedom of the Mediterranean—our maritime supremacy—or the thousand other dangers with which we are threatened as the immediate consequence of the possession of Constantinople by the Russians?

If we would form a fair estimate of the probable results of that event, we ought to glance, for a moment, at the conduct of the same people under somewhat similar circumstances in another quarter. The policy pursued by Russia on the Gulf of Finland, (where St. Petersburg arose, like an exhalation from the marshes of the Neva,) when those districts were wrested, by its founder, from the maniac Charles XII., would, we have a right to assume, be imitated by the same nation on the shores of the Bosphorus. Let us here pause to do homage to that noblest example of history, far surpassing the exploits of Alexander or Napoleon—that sublime act of devotion at the shrine of commerce and civilization, offered by Peter the Great, who, to instruct his subjects in the science of navigation and the art of ship-building, voluntarily descended from a throne, where he was surrounded

by the pomp and splendour of a great potentate, and became a menial workman in the dockyards of Saardam and Deptford! We vindicate not his crimes or his vices—the common attributes of the condition of society in which he lived; his cruelty was but the natural fruit of irresponsible power in savage life; and his acts of grossness and intemperance were regarded, by the nation, as honourable exploits: but the genius that enabled him to penetrate the thick clouds of prejudice and ignorance which enveloped his people, and to perceive, afar off, the power which civilization and commerce confer upon nations, was the offspring of his own unaided spirit, and will ever be worthy of peculiar honour at the hands of the historian. Everybody knows under what trying disadvantages this metropolis, planted in the midst of unhealthy and barren marshes, and in a latitude that, by the ancients, was placed beyond the limits of civilization, sprung from the hands of its founder, and stood forth the most wonderful phenomenon of the 18th century. At present, this capital, which contains upwards of 300,000 inhabitants, and is termed, from the splendour of its public buildings, a city of palaces, can boast of scientific bodies which are in correspondence with all the learned societies of Europe. The government has sent out circumnavigators, who have made discoveries in remote regions of the globe. St. Petersburg contains museums of art and literature; some of the first specimens of sculpture and painting are to be seen in its public halls; its public libraries contain twice as many volumes as those of London; and the best collection of Chinese,

Japanese, and Mongol books are to be found on their shelves. All the decencies and even elegancies of life, observable in Paris or London, are found to prevail over this northern metropolis; and there is nothing in the streets (unless it be the costume of the people, necessary to meet the exigencies of the climate) to remind the eye of the traveller that he is not in one of the more western Christian capitals.

We may fairly assume that, were Russia to seize upon the capital of Turkey, the consequences would not at least be less favourable to humanity and civilization than those which succeeded to her conquests on the Gulf of Finland a century ago. The seraglio of the Sultan would be once more converted into the palace of a Christian monarch; the lasciviousness of the harem would disappear at the presence of his Christian empress; those walls which now resound only to the voice of the eunuch and the slave, and witness nothing but deeds of guilt and dishonour, would then echo the footsteps of travellers and the voices of men of learning, or behold the assemblage of high-souled and beautiful women, of exalted birth and rare accomplishments, the virtuous companions of ambassadors, tourists, and merchants, from all the capitals of Europe. We may fairly and reasonably assume that such consequences would follow the conquest of Constantinople: and can any one doubt that, if the government of St. Petersburg were transferred to the shores of the Bosphorus, a splendid and substantial European city would, in less than twenty years, spring up, in the place of those huts which now constitute the capital of Turkey?—that noble public

buildings would arise, learned societies flourish, and the arts prosper?—that, from its natural beauties and advantages, Constantinople would become an attractive resort for civilised Europeans?—that the Christian religion, operating instantly upon the laws and institutions of the country, would ameliorate the condition of its people?—that the slave market, which is now polluting the Ottoman capital centuries after the odious traffic has been banished from the soil of Christian Europe, would be abolished?—that the demoralising and unnatural law of polygamy, under which the fairest portion of the creation becomes an object of brutal lust and an article of daily traffic, would be discountenanced?—and that the plague, no longer fostered by the filth and indolence of the people, would cease to ravage countries placed in the healthiest latitudes and blessed with the finest climate in the world? Can any rational mind doubt that these changes would follow from the occupation of Constantinople by Russia, every one of which, so far as the difference in the cases permitted, has already been realised more than a century in St. Petersburg? But the interests of England, it is alleged, would be endangered by such changes. We deny that the progress of improvement and the advance of civilization can be inimical to the welfare of Great Britain. To assert that *we*, a commercial and manufacturing people, have an interest in retaining the fairest regions in Europe in barbarism and ignorance—that *we* are benefited because poverty, slavery, polygamy, and the plague abound in Turkey—is a fallacy too gross even for refutation.

One of the greatest dangers apprehended (for we set out with promising to answer the popular objections to the aggrandisement of Russia in this quarter) is, from the injury which would be inflicted upon our trade; which trade, exclusively of that portion of our nominal exports to Turkey which really goes to Persia, does not much exceed half a million yearly, an amount so contemptible when we recollect the population, magnitude, and natural fertility of that empire, that it might safely be predicted, under no possible form of government could it be diminished. But Russia is said, by the panegyrists of Turkey, to be an anti-commercial country. We have already seen that, to Russian influence we are indebted for the liberation of the Black Sea from the thralldom in which it had been held, by Turkish jealousy, for three hundred years. If, however, we would judge of the probable conduct of that people after the conquest of Constantinople, we must appeal to the experience which they have given us of their commercial policy at St. Petersburg. The first Dutch merchant vessel (whose captain was welcomed with honours and loaded with presents by Peter the Great) entered that harbour in 1703; and, at the present time, fifteen hundred vessels clear out annually from the capital of Russia for all parts of the world. The internal navigation of this vast empire has been improved, with a patience and perseverance, in the last century, which, bearing in mind the impediments of climate and soil, are deserving our astonishment and admiration, and which contrasts strangely with the supineness of that Mahometan people whose habits are,

according to some writers, so favourable to trade, but in whose country not one furlong of canal or navigable stream, the labour of Turkish hands, has been produced in upwards of three hundred years ! Three great lines of navigation, one of them 1400 miles long, extend through the interior of Russia, by which the waters of the Baltic, the Caspian, and the Black Sea are brought into connection ; and by which channels the provinces of the Volga, the plains of the Ukraine, and the forests and mines of Siberia, transmit their products to the markets of Moscow and St. Petersburg.* Much as may with truth be alleged against the lust for aggrandizement with which Russian counsels have been actuated, yet, if we examine, we shall find that it is by the love of improvement—the security given, by laws, to life and property—but, above all, owing to the encouragement afforded to commerce—that this empire has, more than by conquest, been brought forth from her frozen regions, to hold a first rank among the nations of Europe.

The laws for the encouragement of trade are direct and important ; and their tendency is to destroy the privileges of the nobles, by raising up a middle class precisely in the same way by which our own Plantagenets countervailed the powers of the barons. Every Russian, carrying on trade, must be a burgher, and a registered member of a guild or company ; and of these guilds there are three ranks, according to the capitals of the members :—

* Boats may, we are told, go from St. Petersburg to the Caspian Sea, without unloading.

10 to 50,000 roubles* entitles to foreign commerce, exempts from corporal punishment, and qualifies to drive about in a carriage and pair.

5 to 10,000 roubles, the members of this guild are confined to inland trade.

1 to 5,000 roubles includes petty shopkeepers.

Besides these guilds for merchants, the porters of the large towns associate together in bodies, called *artels*, resembling, in some respects, the company of wine coopers in London, for the purpose of guaranteeing persons employing one of them from any loss or damage to his goods. Now, in a country, however far removed from a state of freedom and civilization, (*and we maintain that, in these respects, the condition of Russia is in arrear of all other Christian states,*) where laws such as these exist, for encouraging industry, conferring privileges upon traders, and doing honour to the accumulation of capital—in that country prodigious strides have been already taken on the only true path to enlightenment and liberty. *On this path the Turks have disdained to advance a single step.* Here we have at one glance the distinctive characters of the Turkish and Russian, the Sclavonic and Mongolian races—the former unchanging and stationary, the latter progressing and imitative. The very stringent laws which Russia has passed against the importation of our fabrics, are indications of the same variety of character; evincing a desire to rival us in mechanical industry: whilst the apathy with which the Turk sees every article of our manufactures enter his ports, without being stimulated to

* A rouble is about 10½d.

study the construction of a loom or spinning frame, is but another manifestation of his inferior structure of intellect.

To return, then, to the oft agitated question, as to the danger of our commerce consequent upon the conquest of Constantinople by Russia—are we not justified in assuming that our exports to Turkey would exceed half a million per annum, if that fertile region were possessed by a nation governed under laws for the fostering of trade, such as we have just described? Some persons argue, indeed, that, although the productive industry of those countries would augment under such supposed circumstances, still, so great is the enmity of the Russians towards England, that we should be excluded from all participation in its increase. But how stands the case if we appeal to the policy of that people, as already experienced, and find that—notwithstanding that our own tariff at this time interposes a duty of 100 per cent. against the two staple articles of Russian produce, timber and corn—the amount of trade carried on between Great Britain and St. Petersburg, is equal to that of the latter with all the rest of the world together; for, of the 1500 vessels clearing annually from that port, 750 are British? But it is contended that, if Russia were put into possession of the Turkish provinces, she would possess, within her own limits, such a command of all the natural products as might enable her to close the Hellespont against the world, and begin a Japanese system of commercial policy. To this we reply, that commerce cannot, in the present day, turn hermit. It will not

answer for a people to try, in the words of Sheridan, to get “an atmosphere and a sun of its own.” Nay, better still—no country can carry on great financial transactions except through the medium of England. We are told by Mr. Rothschild, in his evidence before the legislature, that London is the metropolis of the moneyed world ; that no large commercial operations can possibly be carried on, but they must be, more or less, under the influence of this common centre of the financial system, round which the less affluent states, like the humbler orbs of the solar creation, revolve, and from whence they must be content to borrow lustre and nourishment. Supposing, indeed, that Russia were in possession of Turkey, and should commence a system of non-intercourse, (we are under the necessity of making these whimsical suppositions in order to reply to grounds of argument which are actually advanced every day by *grave* writers upon this question,) could she carry on those extensive manufactures which some people predict, without deriving a supply of raw ingredients from other countries? It will suffice on this head if we observe, that, to enable any one of our manufacturers to conduct the simplest branch of his mechanical and chemical industry, it is requisite that he be duly supplied with materials, the growth of every corner of the globe ;—the commonest printed calico, worn by the poorest peasant’s wife, is the united product of the four quarters of the earth ; the cotton of America, the indigo of Asia, the gum of Africa, and the madder of Europe, must all be brought from those remote regions, and be made to combine with fifty other as apparently heterogeneous

commodities, by ingenious arts and processes, the results of ten thousand philosophical experiments—and all to produce a rustic's gown-piece! Whilst such are the exigencies of manufacturing industry, binding us in abject dependence upon all the countries of the earth, may we not hope that freedom of commerce, and an exemption from warfare, will be the inevitable fruits of the future growth of that mechanical and chemical improvement, the *germ* of which has only been planted in our day? Need we add one word to prove that Russia could not—unless she were to discover another chemistry, which should wholly alter the properties of matter—at the same time seclude herself from the trade of the rest of the world, and become a rich and great manufacturing or commercial nation? Wherever a country is found to favour foreign commerce, whether it be the United States, Russia, Holland, China, or Brazil, (we speak only of commercial nations, and, of course, do not include France), it may infallibly be assumed, that England partakes more largely of the advantages of that traffic than any other state; and the same rule will continue to apply to the *increase* of the commerce of the world, in whatever quarter it may be, so long as the British people are distinguished by their industry, energy, and ingenuity; and provided that their rulers shall keep pace in wise reforms and severe economy with the governments of their rivals. It follows, then, that, with reference to trade, there can be no ground of apprehension from Russia. If that people were to attempt to exclude all foreign traffic, they would enter, at once, upon the high road to

barbarism, from which career there is no danger threatened to rich and civilized nations; if, on the other hand, that state continued to pursue a system favourable to foreign trade, then England would be found at Constantinople, as she has already been at St. Petersburg, reaping the greatest harvest of riches and power, from the augmentation of Russian imports.

By far the greater proportion of the writers and speakers upon the subject of the power of Russia, either do not understand, or lose sight of the all important question, What is the true source of national greatness? The path by which alone modern empires can hope to rise to supreme power and grandeur, (would that we could impress this sentiment upon the mind of every statesman in Europe!) is that of labour and improvement. They who, pointing to the chart of Russia, shudder at her expanse of impenetrable forests, her wastes of eternal snow, her howling wildernesses, frowning mountains, and solitary rivers; or they who stand aghast at her boundless extent of fertile but uncultivated steppes, her millions of serfs, and her towns the abodes of poverty and filth—know nothing of the true origin, in modern and future times, of national power and greatness. This question admits of an appropriate illustration, by putting the names of a couple of heroes of Russian aggression and violence, in contrast with two of their contemporaries, the champions of improvement in England. At the very period when Potemkin and Suwarrow were engaged in effecting their important Russian conquests in Poland and the Crimea, and whilst those monsters

of carnage were filling the world with the lustre of their fame, and lighting up one-half of Europe with the conflagrations of war—two obscure individuals, the one an optician, and the other a barber, both equally disregarded by the chroniclers of the day, were quietly gaining victories in the realms of science, which have produced a more abundant harvest of wealth and power to their native country, than has been acquired by all the wars of Russia during the last two centuries. Those illustrious commanders in the war of improvement, Watt and Arkwright, with a band of subalterns—the thousand ingenious and practical discoverers who have followed in their train—have, with their armies of artisans, conferred a power and consequence upon England, springing from successive triumphs in the physical sciences and the mechanical arts, and wholly independent of territorial increase—compared with which, all that she owes to the evanescent exploits of her warrior heroes, sinks into insignificance and obscurity. If we look into futurity, and speculate upon the probable career of one of these inventions, may we not with safety predict that the steam engine—the perfecting of which belongs to our own age, and which even now is exerting an influence in the four quarters of the globe—will at no distant day produce moral and physical changes, all over the world, of a magnitude and permanency, surpassing the effects of all the wars and conquests which have convulsed mankind since the beginning of time! England owes to the peaceful exploits of Watt and Arkwright, and not to the deeds of Nelson and

Wellington, her commerce, which now extends to every corner of the earth; and which casts into comparative obscurity, by the grandeur and extent of its operations, the peddling ventures of Tyre, Carthage, and Venice, confined within the limits of an inland sea.

If we were to trace, step by step, the opposite careers of aggrandizement, to which we can only thus hastily glance—of England, pursuing the march of improvement within the area of four of her counties, by exploring the recesses of her mines, by constructing canals, docks, and railroads, by her mechanical inventions, and by the patience and ingenuity of her manufacturers in adapting their fabrics to meet the varying wants and tastes of every habitable latitude of the earth's surface; and of Russia, adhering to her policy of territorial conquests, by despoiling of provinces, the empires of Turkey, Persia, and Sweden, by subjugating in unwilling bondage the natives of Georgia and Circassia, and by seizing with robber hand the soil of Poland:—if we were to trace these opposite careers of aggrandizement, what should we find to be the relative consequences to these two empires? England, with her steam-engine and spinning frame, has erected the standard of improvement, around which every nation of the world has already prepared to rally; she has, by the magic of her machinery, united for ever two remote hemispheres in the bonds of peace, by placing Europe and America in absolute and inextricable dependence on each other; England's industrious classes, through the energy of their commercial enterprise, are at this

moment, influencing the civilization of the whole world, by stimulating the labour, exciting the curiosity, and promoting the taste for refinement of barbarous communities, and, above all, by acquiring and teaching to surrounding nations, the beneficent attachment to peace. Such are the moral effects of improvement in Britain, against which Russia can oppose comparatively little, but the example of violence, to which humanity points as a beacon to warn society from evil. And if we refer to the physical effects—if, for the sake of convincing minds which do not recognise the far more potent moral influences—we descend to a comparison of mere brute forces, we find still greater superiority resulting from ingenuity and labour. The manufacturing districts alone—even the four counties of England, comprising Lancashire, Yorkshire, Cheshire, and Staffordshire—could, at any moment, by means of the wealth drawn, by the skill and industry of its population, from the natural resources of this comparative speck of territory, combat with success the whole Russian empire! Liverpool and Hull, with their navies, and Manchester, Leeds, and Birmingham, with their capitals, could blockade, within the waters of Cronstadt, the entire Russian marine, and annihilate the commerce of St. Petersburg. And, further, if we suppose that, during the next thirty years, Russia, adhering to her system of territorial aggrandizement, were to swallow up, successively, her neighbours, Persia and Turkey—whilst England, which we have imagined to comprise only the area of four counties, still persevered in her present career

of mechanical ingenuity, the relative forces would, at the end of that time, yet be more greatly in favour of the peaceful and industrious empire. This mere speck on the ocean—without colonies, which are but the costly appendage* of an aristocratic government—without wars, which have ever been but another aristocratic mode of plundering and oppressing commerce—would, with only a few hundred square leagues of surface, by means of the wealth which, by her arts and industry, she had accumulated, be the arbitress of the destiny of Russia, with its millions of square miles of territory. Liverpool and Hull, with their thousands of vessels, would be in a condition to dictate laws to the possessor of one-fourth part of the surface of the globe: they would then be enabled to blockade Russia in the Sea of Marmora, as they could now do in the Gulf of Finland—to deny

* Some people contend that our colonies are profitable to us, because they consume our manufactures; although it is notorious that they do not buy a single commodity from us which they could procure cheaper elsewhere, whilst we take frequently articles from them of an inferior quality and at a dearer rate than we could purchase at from other countries. But what do the advocates of the present system say to the fact, that we are at this moment paying thirty per cent. more for the colonial productions consumed in our houses, than is paid for similar articles, *procured from our own colonies, too*, by the people of the Continent? A workman in London, an artisan in Manchester, or a farmer of Wales, buys his Jamaica sugar and coffee thirty per cent. dearer than the native of Switzerland or America, perhaps five hundred miles distant from a port, and whose governments never owned a colony! But, it will be said, this is necessary taxation to meet the interest of the debt. And what have we to show for the national debt but our colonies?

her the freedom of the seas—to deprive her proud nobles of every foreign commodity and luxury, and degrade them, amidst their thousands of serfs, to the barbarous state of their ancestors of the ancient Rousniacs—and to confine her Czar in his splendid prison of Constantinople!* If such are the miracles of the mind, such the superiority of improvement over the efforts of brute force and violence, is not the writer of these pages justified in calling the attention of his countrymen elsewhere,† to the progress of

* The amount of our exports of cotton goods, of which industry Manchester is the centre, is double that of the exports of every kind from all the Russian empire; the shipping entering Liverpool annually, exceeds the tonnage of St. Petersburg eightfold! These facts, which we can only thus allude to with epigrammatic brevity, convey forcibly to the reflecting mind, an impression of the mighty influence which now slumbers in the possession of the commercial and manufacturing portions of the community; how little they understand the extent of their power, may be acknowledged, when we recollect that this great and independent order of society (for the manufacturing interest of England is, from the nature of its position with reference to foreign states, more independent of British agriculture than the latter is of it) is deprived of the just reward of its ingenious labour, by the tyranny of the corn-laws; that it possesses no representation, and consequently no direct influence, in *one* of the Houses of Parliament—the members of which, to a man, are interested in the manufacture and high price of food—and that it still lies under the stigma of feudal laws, that confer rights, privileges, and exemptions upon landed possessions, which are denied to personal property.

† Since the publication of “England, Ireland, and America,” the author has had an opportunity of visiting the United States, and of taking a hasty glance of the American people; and his ocular experience of the country has confirmed him in the views he put forth in that pamphlet. Looking to the natural endow-

another people, whose rapid adoption of the discoveries of the age, whose mechanical skill and unrivalled industry in all the arts of life—as exemplified in their thousands of miles of railroads, their hun-

ments of the North American continent—as superior to Europe as the latter is to Africa—with an almost immeasurable extent of river navigation—its boundless expanse of the most fertile soil in the world, and its inexhaustible mines of coal, iron, lead, &c. :—looking at these, and remembering the quality and position of a people universally instructed and perfectly free, and possessing, as a consequence of these, a new-born energy and vitality very far surpassing the character of any nation of the old world—the writer reiterates the moral of his former work, by declaring his conviction that it is from the west, rather than from the east, that danger to the supremacy of Great Britain is to be apprehended ;—that it is from the silent and peaceful rivalry of American commerce, the growth of its manufactures, its rapid progress in internal improvements, the superior education of its people, and their economical and pacific government—that it is from these, and not from the barbarous policy or the impoverishing armaments of Russia, that the grandeur of our commercial and national prosperity is endangered. *And the writer stakes his reputation upon the prediction, that, in less than twenty years, this will be the sentiment of the people of England generally ; and that the same conviction will be forced upon the government of the country.*

The writer has been surprised at the little knowledge that exists here with respect to the mineral resources of America. Few are aware that in nothing does that country surpass Europe so much as in its rich beds of coal. By a government survey of the State of Pennsylvania, it appears that it contains twenty thousand square miles of coal, with iron in proportion. This in one State only ! whilst the whole of the Mississippi valley is more or less enriched with this invaluable combustible. Several of his neighbours have been astonished by the inspection of a specimen of bituminous coal, which the writer procured from a pit at

dreds of steam-boats, their ship-building, manufacturing, patent inventions—whose system of universal instruction, and, above all, whose inveterate attachment to peace—all proclaim America, by her competition in improvements, to be destined to affect more vitally than Russia by her aggrandizement of territory, the future interests of Great Britain?

If then, England, by promoting the peaceful industry of her population, is pursuing a course which shall conduct her to a far higher point of moral and physical power than Russia can hope to reach by the opposite career of war and conquest, we must seek for some other motive than that of danger to ourselves, for the hostilities in which we are urged, by so many writers and speakers, to engage with that northern people.

The great grievance, indeed, with us, is one which, all things borne in remembrance, displays quite as

Brownsville, on the Monongahela river, above Pittsburgh, and which is pronounced equal to the very best qualities produced from the mines in Yorkshire. The mode of working the pits is, to drive an adit into the sloping banks of the navigable rivers; and, at a few yards distance, the coal stratum is usually found, six feet in thickness; and, as the miner is always enabled to work in an upright posture, one man will frequently produce as much as 100 loads a-day. The steam-boat in which the author went from Brownsville to Pittsburgh, stopped at one of those pits' mouths, and took in a supply of fuel, which was charged at the rate of about three farthings a bushel. These are facts which bear more directly upon the future destinies of this country, than the marriages of crowned heads in Portugal, the movements of savage forces in Russia, and similar proceedings, to which we attach so much importance.

much naiveté in the character of the British people as is consistent with a moderate share of self-knowledge. The Russians are accused by *us* of being an aggrandizing people! From the day of Pultowa down to the time of the passage of the Balkan—say the orators, journalists, reviewers, and authors—the government of St. Petersburg has been incessantly addicted to picking and stealing. But, in the meantime, has England been idle? If, during the last century Russia has plundered Sweden, Poland, Turkey and Persia, until she has grown unwieldy with the extent of her spoils, Great Britain has, in the same period, robbed—no, that would be an unpolite phrase—“*has enlarged the bounds of his Majesty’s dominions*” at the expense of France, Holland, and Spain. It would be false logic, and just as unsound morality, to allow the Muscovite to justify his derelictions of honesty by an appeal to our example; but surely we, who are staggering under the embarrassing weight of our colonies, with one foot upon the rock of Gibraltar and the other at the Cape of Good Hope—with Canada, Australia, and the peninsula of India, forming, Cerberus-like, the heads of our monstrous empire—and with the hundred minor acquisitions scattered so widely over the earth’s surface as to present an unanswerable proof of our wholesome appetite for boundless dominion—surely *we* are not exactly the nation to preach homilies to other people in favour of the national observance of the eighth commandment!*

* *Extract from Mr T. Attwood’s speech, House of Commons, July 9, 1833.*—“The House will recollect that, for two centuries,

If *we* find all these possessions to be burdensome, rather than profitable—if, in common with all marauders, *we* discover, by experience, that the acquisitions of fraud or violence confer nothing but disappointment and loss—we shall not improve our case by going to war to prevent Russia pursuing the same course, which will inevitably conduct her to a similar fate, where the same retribution, which will ever accompany an infringement of the moral laws, awaits her. England and Russia, in the act of scolding each other on the reciprocal accusation of unjust aggrandizement, present an appearance so ludicrous that it forcibly recalls to our recollection the quarrel between the two worthies of the Beggars' Opera, the termination of which scene we recommend to the imitation of the diplomatists of the two Courts. Like Lockit and Peachum, the British lion and the Russian bear,

Russia has been gradually encroaching upon the territories of all her neighbours ; for the last 150 years her progress has been general on all sides—east, west, north, and south. A few years ago, she attacked Sweden and seized upon Finland. Then she attacked Persia, and added some most important provinces to her empire in the south. Not content with this, she appropriated, in 1792, a great part of Poland ; and it is but lately she has attacked Turkey. Thus, for years, she has gone on in her course of aggrandizement, in defiance of the laws of God and man!”—If for Sweden, Persia, and Poland, we substitute France, Spain, and Holland, and if, instead of Turkey, we put the Burmese empire, how admirably the above description would apply to another nation, of whose unprofitable aggrandizements in Europe, Asia, Africa, and America, Mr. Attwood may read a few particulars in Mr. Montgomery Martin's “ History of the British Colonies”—five volumes, octavo !

instead of tearing one another, had better hug and be friends—"Brother *bruin*, brother *bruin*, we are both in the wrong."

Lord Dudley Stuart, (whose zeal, we fear, without knowledge, upon the subject of Poland, and whose prejudice against Russia, have led him to occupy so much of the public time, uselessly, upon the question before us,) in the course of his long speech in the House of Commons (February 19th,) upon introducing the subject of Russian encroachments, dwelt, at considerable length, upon the lust of aggrandizement by which he argued that the government of St. Petersburg was so peculiarly distinguished; and he brought forward, at considerable cost of labour, details of its successive conquests of territory during the last century. Where the human mind is swayed by any passion of however amiable a nature, or where the feelings are allowed to predominate over the reason, in investigating a subject which appeals only to the understanding, it will generally happen that the judgment is defective. We attribute to the well known fervour of Lord Stuart's sentiments upon Russia and Poland, the circumstance that, during the fortnight which he must have employed in collecting the dates of the several treaties by which the former empire has wrested its possessions from neighbouring states, the thought never once occurred to him—a reflection which would have entered the head of almost any other man of sense, who sat down coolly to consider the subject—that, during the last hundred years, England has, for every square league of territory annexed to Russia, *by force, violence, or fraud, appro-*

priated to herself three. Such would have been the reflection which flashed across the mind of a statesman who sat down, *dispassionately*, to investigate the subject of Russian policy; and it must have prevented him, by the consciousness of the egotism and arrogance—nay, the downright effrontery* of such a course—from bringing an accusation against another people which recoils with threefold† criminality upon ourselves. Nor, if we were to enter upon a comparison of the cases, should we find that the *means* whereby Great Britain has augmented her possessions, are a whit less reprehensible than those which have been resorted to by the northern power for a similar purpose. If the English writer calls down indignation upon the conquerors of the Ukraine, Finland, and the Crimea, may not Russian historians conjure up equally

* We allude to the nation—the epithet cannot be applied to his Lordship.

† We speak after due investigation and calculation, and not at random, when we allege that England has acquired three times as much territory as Russia during the last century. The Cape is computed at half a million of square miles, Canada at half as much more, India and New Holland will be found each with an area almost as large as that of the cultivable portion of Europe; not to mention other acquisitions too numerous to be described within the limits of a pamphlet!

Progressive augmentation of the Russian Empire:—

	Sq. miles.	Population.
At the accession of Peter I.	1689, 2,980,000	15,000,000
At his death,	1725, 3,150,000	20,000,000
At the accession of Catherine II.	1763, 3,700,000	25,000,000
At her death,	1796, 3,850,000	36,000,000
At the death of Alexander,	1825, 4,250,000	58,000,000

painful reminiscences upon the subjects of Gibraltar, the Cape, and Hindostan? Every one conversant with the history of the last century, will remember that England has, during almost all that period, maintained an ascendancy at sea; and colonies, which were in times past regarded as the chief source of our wealth and power, being pretty generally the fruits of every succeeding war, the nation fell into a passion for conquest, under the delusive impression that those distant dependencies were, in spite of the debt contracted in seizing them, profitable acquisitions to the mother country. Hence the British Government was always eager for hostilities, the moment an excuse presented itself, with one of the maritime continental states, possessing colonies; and of the several conflicts in which we have been involved since the peace of Ryswick, at least three out of four have been consequent upon declarations of war made by England.*

* The policy of England has been aggressive at all times; but we are far from exulting in the fact of having always dealt the first blow, as Mr. Thomas Attwood of Birmingham would wish us to do, when he tells us, exultingly, in the House of Commons, whilst speaking of Russia—(*See Mirror of Parliament*, 1833, p. 2874)—“We, the people of England, who have never known what fear is; who have been accustomed, for seven hundred years, to give a blow first and to receive an apology afterwards; we, who have borne the British lion triumphant through every quarter of the world, and are now forced to submit to insults from this base and brutal, and this in reality weak power—a power which, from its mere physical force, contrives, like a great bully, to intimidate the moral strength of Europe!” Now, putting aside the exquisitely ludicrous charge of bullying, alleged against Russia by one who boasts that, for seven hundred years, *we* have “struck the first

Russia, on the contrary, has been nearly surrounded by the territory of barbarous nations, one of which*—
by the very nature of its institutions warlike and

blow," and which reminds us of the scene between Sir Anthony Absolute and his "insolent, impudent, overbearing" son, Jack ; we have here a specimen of that sort of sentiment which horses or buffaloes, if they could make speeches, might very properly indulge in, but which is derogatory to the rank of reasoning beings, who possess intellectual faculties in lieu of hoofs and horns.

Mr. Attwood is an advocate for war and paper money—*the curse and scourge of the working classes !* What do the Birmingham mechanics say to the following picture of the effects of the last war upon the prosperity of their town ? The same results would follow a like cause, should a war be entered into, to gratify their favourite representative.

Extract from Mr. Grey's (now Lord Grey) speech on the state of the nation, March 25, 1801.—See Hansard's Parliamentary History, vol. 35, p. 1064.

"I come now to speak of the internal state of the country. Two hundred and seventy millions have been added to our national debt, exclusive of imperial and other loans, and of the reduction effected by the sinking fund ; and yet we are told, by the ex-ministers, that they leave the country in a flourishing situation ! I ask any man whether, from diminished comforts or from positive distress, he does not feel this declaration an insult. Ask the ruined manufacturers of Yorkshire, Manchester, and Birmingham ; ask the starving inhabitants of London and Westminster. In some parts of Yorkshire, formerly the most flourishing, it appears, from an authentic paper which I hold in my hand, that the poor-rates have increased from £522. to £6000. a-year ; though the whole rack-rent of the parish does not exceed £5600. *In Birmingham, I know, from undoubted authority, there are near 11,000 persons who receive parochial relief, though the whole number of the inhabitants cannot exceed 80,000—and this of a town reckoned one of the most prosperous in England.*"

* Turkey.

aggressive—was, up to the middle of the last century, prompted, by a consciousness of strength, and, since then, by a haughty ignorance of its degeneracy, to court hostilities with its neighbours; and the consequence of this and other causes is, that, in the majority of cases, where Russia has been engaged in conflicts with her neighbours, she will be found to have had a war of self-defence for her justification. If such are the facts—if England has, for the sake of the spoil which would accrue to her superiority of naval strength, provoked war, with all its horrors, from weak and unwilling enemies, whilst Russia, on the contrary, with ill-defined boundaries, has been called upon to repel the attacks of fierce and lawless nations—surely, we must admit, unless pitifully blind by national vanity, that the gain (if such there be) resulting from these contentions, is not less unholy in the former than the latter case; and that the title by which the sovereign of St. Petersburg holds his conquered possessions is just as good, at least, as that by which the government of St. James's asserts the right to ours. In the case of Poland, to which we shall again have to recur by and by, there was, indeed, a better title than that of the sword, but which, amidst the clamour of fine sentiments, palmed by philanthropic authors and speakers upon the much abused public mind, about Russian aggression in that quarter, has never, we believe, been mentioned by any orator, reviewer, or newspaper writer of the present day. The "Republic of Poland" (we quote the words of Malte Brun) "had been chiefly composed of provinces wrested from Russia, or from the Great Dukes of Galitch,

Vladimir, Volynski, Polotzk, and particularly Kiow by Boleslas the Victorious, Casimir the Great, Kings of Poland, and by Gedimir, Great Duke of Lithuania. Thus, the nobles were the only persons interested in the defence of provinces, whose inhabitants were estranged from the Poles, although they had remained under their government from the time of the conquest. All the peasants of Podolia and Volhynia, were Rousniacs, or Little Russians, ignorant of the language or customs of Poland, which may partly account for the success of the Russians in their invasions of the Polish republic. The Poles, who were persecuted by intolerant Catholic Priests, who disregarded the constitutions of the Polish diet, abandoned their lords without reluctance, and received willingly their countrymen, the Russian soldiers, who spoke the same dialect as themselves. The division of Poland was, on the part of Russia, not so much a lawless invasion as an act of reprisal on former invaders. Had this leading historical fact been explained in the Russian manifesto, which was published in 1772, so much obloquy might not have been attached to the conduct of that people."

Leaving, however, the question of title—which, whatever may be the conflicting opinions of moralists and legists, is, in the case of national tenures, usually decided according to the *power* of the possessor to hold in fee—we shall be next reminded of the great benefits which British conquests have conferred upon remote and uncivilized nations, particularly in the example of India; and we shall be called upon to show in what manner Russia has compensated for her

violent seizures of independent territory, by any similar amelioration of the condition of its people. Before doing so, we shall premise that we do not offer it as a justification of the policy of Russia. If, by chance, the plunderer makes good use of his spoil, that is not a vindication of robbery ; and because the serf of Poland, the savage of Georgia, and the ryot of Bengal, enjoy better laws under the sway of Russia and Great Britain, than they formerly possessed beneath their own governments—to argue that, therefore, these two powers stand morally justified in having subjugated, with fire and sword, those three less civilized states, would be to contend that America, instead of contenting herself with imparting improvements to the unenlightened communities of Europe, by the peaceful but irresistible means of her high example, is warranted in invading Naples or Spain, for the purpose of rescuing their people from the thralldom of monarchy, or marching to Rome, and, in place of the Pope, installing a President in the palace of the Vatican !* It is, then, with no view to

* Yet there are perverse and purblind moralists, who can see proofs of God's interposition in every atrocious crime that happens, in its consequences, to carry some alloy of good ; which merely proves that the great Ruler of the universe has, in *spite* of us, set his fiat against the predominancy of evil. A clergyman, we believe Dr. Buchanan, of high attainments and strict evangelical doctrines, who passed many years in India, proposed a prize essay, on his return to England, *as to the probable designs of Providence in placing the Indian empire in the hands of Great Britain !* This, from a contemporary of Warren Hastings, is little less blasphemous than the *Te Deums* sung by Catherine, for the victories of Ismail and Warsaw.

the justification of war and violence, but solely for the purpose of answering, by a few facts of unquestionable authenticity, those spurious appeals to our sympathies, based upon the false assumption of Russian aggrandizement being but another term for the spread of barbarism and the extinction of freedom and civilization, that we glance at the proofs which are afforded in every direction, of the vast moral, political, and commercial advantages that have been bestowed upon the countries annexed by conquest to that empire.

The writers who have attempted to lead public opinion upon the subject, have not scrupled to claim the interposition of our government with Russia, for the purpose of restoring to *freedom* and *independence* those Caucasian tribes to which we have before alluded, as having fallen under the partial dominion of Russia. Their previous state of freedom may be appreciated, when we recollect that, within our own time, a fierce war was waged between the most powerful of these nations* and the Turks, in consequence of their having refused to continue to supply the harems of the latter with a customary annual tribute of the handsomest of their daughters; offering, however, at the same time, in lieu, a yearly contribution in money. We have already alluded to the emancipating influence of Russian intervention over the commerce of the Black Sea, the only channel by which the civilizing intercourse with commercial nations can extend to these unenlightened regions;

* The Georgians.

and we have been told, by the very highest authority,* that their trade, agriculture, and social improvement, already attest the beneficent effects of this improved policy. The following extract from a work† of great and deserved reputation, gives the most recent information upon the countries under consideration; and it conveys, perhaps, all that could be said upon the effects of Russian aggrandizement in these quarters:—"The southern declivity of these mountains is highly fertile, abounding in forests and fountains, orchards, vineyards, corn fields, and pastures in rich variety. Grapes, chestnuts, figs, &c., grow spontaneously in these countries; as well as grain of every description—rice, cotton, hemp, &c. But the inhabitants are barbarous and indolent. They consist of mountain tribes, remarkably ferocious, whose delight is in war, and with whom robbery is a hereditary trade; and their practice is to descend from their fastnesses and to sweep everything away from the neighbouring plains—not only grain and cattle, but men, women, and children, who are carried into captivity. The names of the different tribes are, the Georgians, Abassians, Lesghians, Ossetes, Circassians, Taschkents, Khists, Ingooshes, Charabulaks, Tartars, Armenians, Jews, and in some parts wandering Arabs. They are mostly barbarous in their habits, and idolatrous in their religion, worshipping stars, mountains, rocks, and trees. There are among them Greek and Armenian Christians, Mahometans, and Jews. Se-

† Encyclopædia Britannica, new edition, now publishing, vol. 6, p. 250—art. Caucasus.

veral of the tribes, particularly the Circassians and Georgians, are accounted the handsomest people in the world; and the females are much sought after by the eastern monarchs to be immured in their harems. The inhabitants amount to about 900,000, who are partly ruled by petty sovereigns, and partly by their seniors. The most famous are the Lesghians, who inhabit the eastern regions, and, living by plunder, are the terror of the Armenians, Persians, Turks, and Georgians. Their sole occupation is war, and their services can at any time be purchased by every prince in the neighbourhood, for a supply of provisions and a few silver roubles. *Since the extension of the Russian empire in this quarter, many of these mountain tribes have been restrained in their predatory habits. Under the iron rule of that powerful state, they have been taught to tremble and obey; military posts have been dispersed over the country, fortresses have been erected, towns have arisen, and commerce and agriculture begin slowly to supplant the barbarous pursuits of war and plunder, in which these mountain tribes have been hitherto engaged.** But the work of civilization in these wild regions is still slow; it is difficult to reclaim the people from their long-settled habits of

* Yet the most active and persevering assailant of Russia, a writer to whom we alluded in the beginning of this pamphlet, does not scruple to invoke the aid of these hordes against their present rulers:—"The Georgian provinces would instantly throw off the yoke; even the Wallachians, Moldavians, and Bessarabians, would join in the general impulse; the millions of brave and independent Circassians would pour across the Couban and spread over the Crimea—and where would Russia be?"—*See pamphlet, "England, France, Russia, and Turkey."*

violence and disorder ; and it would not be safe for any traveller to pass alone through these countries, where he would be exposed to robbery and murder."

Another ground of ceaseless jealousy, on the part of our philo-Turkish and Russo-maniac writers, has been discovered in the recent intervention of the Russian diplomatists in the affairs of Wallachia and Moldavia. The condition of these two Christian provinces, situated on the right bank of the Danube, and so frequently the scenes of desolating wars between Turkey and her neighbours, has been perhaps more pitifully deplorable than the lot of any other portion of this misgoverned empire. The hospodars or governors of Moldavia and Wallachia were changed every year at the will of the Sultan, and each brought a fresh retinue of greedy dependants, armed with absolute power, to prey upon the defenceless inhabitants. These appointments, as is the case now with every pachalick, were openly sold at Constantinople to the highest bidder ; and the hospodars were left to recover from their subjects the price of the purchase, to pay an annual tribute to the Porte, which was usually levied in kind, giving scope for the most arbitrary exactions ; and, besides, appease the favourites at court, who might otherwise intrigue against them. Need we be surprised that, under such a state of things, the population decreased, agriculture was neglected, and commerce and the arts of civilized existence were unknown in the finest countries of the world ? Not more than one-sixth* part of

* The clergy, from being exempt from taxation, have become possessed of a third of the soil.

the land of Wallachia is at present cultivated ; and Mr. Wilkinson, the late English consul, estimated that, without any extraordinary exertion, the existing population of Wallachia and Moldavia might, if property were secured, raise twice the quantity of corn and double the number of cattle now produced in those provinces. The treaty of 1829, between Russia and Turkey, stipulates that the hospodars shall be elected for life, and that no tribute in kind shall be levied ; it also engages that a quarantine shall be placed on the Danube frontier, thus separating these provinces from the rest of Turkey. This case of intervention is appealed to as a proof of Russian ambition ; and Lord Stuart, in the course of his speech before alluded to, complains that, by this policy, its power is increased in those quarters. Admitting that Russia interferes in behalf of those unhappy countries with no loftier aim than the augmentation of her influence, and that the result will be the separation of the Christian provinces of Moldavia and Wallachia from the rest of the Turkish territory—nay, admitting that this should prove inimical to the interests of England, (though the supposition is absurd enough, since whatever tends to advance the civilization and augment the wealth of any part of the world, must be beneficial in the end to us who are the greatest commercial and manufacturing people)—still the English nation would, we sincerely hope, feel a disinterested gratitude to the power which, by its merciful interposition, has rescued this suffering Christian community from the cruel, remorseless, and harassing grasp of its Mahometan oppressors.

Probably it will not be deemed necessary that we should trace the effects of Russian government over the territories torn at different epochs from the Persian empire: if, however, we did not feel warranted in assuming that even those of our intelligent readers who may be the most inimical to the power of the Czar, will readily admit the superiority of the organized despotism of St. Petersburg over the anarchic tyranny of Teheran, we should be prepared to afford proofs, from the works of travellers themselves hostile to Russian interests, of the rapid ameliorations that have succeeded to the extension of this colossal empire in those regions. Still less shall we be called upon to pause to point out the benefits that must ensue from the annexation of the Crimea to the dominions of the Autocrat. Those wandering tribes of Crim Tartars who exchanged, for the service of the Empress Catherine, the barbarous government of the descendants of Genghis Khan, and who received, as the first fruits of a Christian administration, the freedom of the commerce of the world, by the opening of the navigation of the Black Sea, which immediately succeeded to the encroachments of Russia in that quarter, will gradually but certainly acquire the taste for trade; and, as population increases and towns arise, they will abandon, of necessity, their migratory habits, and become the denizens of civilized society.

We shall, for the sake of brevity, restrict ourselves to the following short passage, from the highest authority that can be consulted, upon the character of Russian policy towards her latest maritime acquisition on the side of the Baltic. "Finland," says

Malte Brun, “was averse to the union with Sweden, and has lost none of its privileges by being incorporated with Russia: it is still governed by Swedish laws; schools have been established during the last twenty years, and the peasantry are in every respect as well protected as in Sweden.”*

* Vol. vi. p. 499, Malte Brun’s Geography.

P O L A N D.

CHAPTER II.

POLAND, RUSSIA, AND ENGLAND.

CONTENTS.—Protest against Russian Tyranny.—True Statement of the Question as to British Interference.—Distinction between the Polish Aristocracy and Polish People.—Tyranny of the Nobles and miserable Condition of the People before the Partition.—Improved Condition under the Russian Government.—True Cause of the Revolt of 1830.—The Incitements of Public Writers and Speakers to a War with Russia, considered.—Lord Dudley Stuart.—Military Weakness and Poverty of Russia.—Her Liability to Blockade by a small Marine force.—Weakness the necessary Result of too Extended Dominion.—No Pretence, consistent with common-sense, for England going to War with Russia.

THE foregoing statements, with reference to portions of the Russian acquisitions, founded upon unquestionable authority, are calculated to awaken some doubts as to the genuineness of those writings and speeches, upon the faith of which we are called upon to subscribe to the orthodox belief in the *barbarizing* tendency of all the encroachments of that country; but these facts are unimportant, when we next have to refer to another of its conquests, and to bring before our readers Poland, upon which has been lavished more false sentiment, deluded sympathy, and amiable ignorance, than on any other subject of the present age. This is a topic, however, upon which it behoves us to enter with circumspection, since we shall have not only to encounter the prepossessions of the ardent and sincere devotee, but also to meet the uncandid

weapons of bigotry and cant. Let us, therefore, as the only sure defence at all times against such antagonists, clothe our arguments from the armoury of reason in the panoply of truth. We will, moreover, reiterate, *for we will not be misunderstood*, that it is no part of our purpose to attempt to justify the conduct of the partitioning powers towards the Poles. On the contrary, we will join in the verdict of murder, robbery, treason, perjury, and baseness, which every free nation and all honest men must award to Russia, Prussia, and Austria, for their undissembled and unmitigated wickedness on that occasion; nay, we will go further, and admit that all the infamy with which Burke, Sheridan, and Fox laboured, by the force of eloquent genius, to overwhelm the emissaries of British violence in India, was justly earned, at the very same period, by the minions of Russian despotism in Poland. But our question is, not the conduct of the conquerors, but the present, as compared with the former condition of the conquered: the first is but an abstract and barren subject for the disquisition of the moralist; the latter appeals to our sympathies, because it is pregnant with the destinies of millions of our fellow-creatures. Of how trifling consequence it must be to the practical minded and humane people of Great Britain, or to the world at large, whether Poland be governed by a king of this dynasty or of that—whether he be lineally descended from Boleslas the Great, or of the line of the Jagellons—contrasted with the importance of the inquiries as to the social and political condition of its people—whether they be as well or worse governed, clothed, fed,

and lodged, in the present day as compared with any former period—whether the mass of the people be elevated in the scale of moral and religious beings—whether the country enjoys a smaller or larger amount of the blessings of peace; or whether the laws for the protection of life and property are more or less justly administered! These are the all-important inquiries about which we busy ourselves; and it is to cheat us of our stores of philanthropy, by an appeal to the sympathy with which we regard those vital interests of a whole people, that the declaimers and writers upon the subject, invariably appeal to us in behalf of the oppressed and enslaved *Polish nation*; carefully obscuring, amidst the cloud of epithets about “ancient freedom,” “national independence,” “glorious republic,” and such like, the fact, that, previously to the dismemberment, the term *nation* implied only the nobles—that, down to the partition of their territory, about nineteen out of every twenty of the inhabitants were slaves, possessing no rights, civil or political—that about one in every twenty was a nobleman—and that this body of nobles formed the very worst aristocracy of ancient or modern times; putting up and pulling down their kings at pleasure; passing selfish laws, which gave them the power of life and death over their serfs, whom they sold and bought like dogs or horses; usurping, to each of themselves, the privileges of a petty sovereign, and denying to all besides the meanest rights of human beings; and, scorning all pursuits as degrading, except that of the sword, they engaged in incessant wars with neighbouring states, or they plunged their

own country into all the horrors of anarchy, for the purpose of giving employment to themselves and their dependants.

In speaking of the Polish nation* previously to the dismemberment of that country by Russia, Prussia, and Austria, we must not think of the *great mass of the people*, such as is implied by the use of that term with reference to the English or French nation of this day: the mass of the people were serfs, who had no legal protection and no political rights—who enjoyed no power over property of any kind, and *who possessed less security of life and limb than has been lately extended to the cattle of this island by the act of Parliament against cruelty to animals!* The nobles, then, although they comprised but a mere fraction of the population, constituted the nation; the rest of the inhabitants, the millions of serfs who tilled the soil, worked the mines, or did the menial labour of the grandees, were actually, in the eye of the law, of no more rank—nay, as we have shewn, they were accounted less—than our horses, which, after the toil of the day, lie down in security under the protec-

* “Never was this corruption of the state so fearful as here, where the nobility constituted the nation; and where morals alone had made the want of a constitution less perceptible. Everything, therefore, deteriorated. The time for awakening from this lethargy could not but come; but what a moment was it to be!” —*Heeren’s Manual*, vol. i. p. 370. “By the constitution of 1791, which changed the government from an elective to a hereditary monarchy, all the privileges of the nobility were confirmed; some favours, though very small, were accorded to the peasants; these were slight, but more could not be granted, *without irritating the former nation, the nobility.*”—*Heeren*, vol. ii. p. 231.

tion of Mr. Martin's benevolent act; whilst the slave of Poland possessed no such guarantee from the wanton cruelty of an arbitrary owner.

To form a correct estimate of the former condition of this country, it is not necessary to go back beyond the middle of the sixteenth century—previously to which the Poles, in common with the other northern states, were barbarians; and, if they attained to power, and exhibited some traits of rude splendour in their court and capital, they were merely results of incessant wars, which, of course, plunged the great mass of the people in deeper misery and degradation. At this early period of their country, we find them the most restless and warlike of the northern nations; and the Poles, who are now viewed only as a suffering and injured people, were, during the thirteenth, fourteenth, and fifteenth centuries, a most formidable and aggressive enemy to the neighbouring empires. They ravaged, successively, Russia, Prussia, Lithuania, Bohemia, and Hungary, and were, in turn, invaded by the Turks, Tartars, and Russians. They knew no other employment than that of the sword: war, devastation, and bloodshed were the only fashionable occupations for the nobility; whilst the peasants reaped the fruits of famine and slaughter. Yet the historian whose volumes, perhaps, adorn the shelves of our colleges, and are deposited in the hands of the rising generation, points to the spectacle of intellectual and moral creatures, grovelling in the abuse of a brute instinct shared equally by the shark and the tiger, and, pausing over the hideous annals of human slaughter, ejaculates—Glory!

At the death, in 1572, of Sigismund Augustus—the last of the Jagello race, in whose house the throne of Poland had been hereditary—a new constitution was framed by the nation, (*that is, the nobles,*) by which it was decreed that the monarchy should be elective; and the choice of the king was free and open to all the nation, (*i.e. the nobles.*) In this constitution—which was concocted for the exclusive benefit of the aristocracy, and did not even notice the existence of the great mass of the wretched people, the slaves—it was agreed, amongst other enactments, that the nobles should pay no taxes; that they should have the power of life and death over their vassals; that all offices, civil, military, and ecclesiastical, should belong to them; and that, in choosing whom they would for a king, they were privileged to lay him under what restrictions they pleased.

The mode of electing their kings, after the promulgation of this new constitution, was characteristic of the nation. About 150,000 to 200,000 nobles, being the electors, assembled together in a large plain: those who possessed horses and arms were mounted and ranged in battle array in the front; whilst such as were poor, and consequently came on foot, and without regular arms, placed themselves, with scythes or clubs in their hands, in the rear ranks. Our readers will readily believe that such an assembly as this, composed of warriors accustomed to violence, and with their arms at hand, would form a dangerous deliberative body; and, unless actuated by the loftiest feelings of patriotism and virtue, it would degenerate into two armies of sanguinary com-

batants. But what could we expect from these elections, when we know that, from the death of Sigismund, down to the time of the partition, Poland became one universal scene of corruption, faction, and confusion? The members of the diet—the nobles who had usurped the power of electing their king—were ready to sell themselves to the best bidder at the courts of Vienna, France, Saxony, Sweden, or Brandenburg; nay, in the words of the learned and philosophical historian,* “A Polish royal election was, henceforth, nothing more than a double auction of the throne—partly in secret, for the benefit of the voters, partly in public, for the benefit of the state;” or, in the words of the same authority, when alluding elsewhere to the change in the constitution at the death of Sigismund—“A volcano, in a manner, burst forth in the midst of Europe, whose eruptions, at almost every change of government, threatened, in turn, every country far and near. Of the eleven kings of Poland, from Henry of Valois, 1572, to Stanislaus, 1764, hardly three were unanimously elected: foreign influence, and a wild spirit of faction, continued from first to last.”† In lamentable truth, almost every election became the signal for a civil war, which usually lasted during the greater portion of the next reign; and thus, for the whole period from 1572 down to 1772, when the first partition was perpetrated by the three neighbouring powers, Poland was the constant scene of anarchy

* Manual of the State Policy of Modern Europe, by Professor Heeren, vol. i. p. 262.

† Heeren, vol. i. pp. 191 and 192.

and its attendant miseries—fire, bloodshed, and famine. There is nothing in the history of the world comparable, for confusion, suffering, and wickedness, to the condition of this unhappy kingdom during these two centuries. “War, even in its mildest form, is a perpetual violation of every principle of religion and humanity.”* But foreign war is carried on with recognized laws for the mitigation of its evils; and under which the rights of person and property are, excepting in well understood cases, secured to the peaceable portions of communities. Should an invasion or a conquest take place, the army of the invader or conqueror is compelled, for self-defence, to preserve discipline, and to congregate, as much as possible, round one centre, by which the enemy’s country is preserved from the licentiousness of the victorious soldiers, and the more remote provinces almost entirely escape the miseries of war. Besides, it becomes immediately the policy and the interest of the victor, to restore the newly acquired territory to its former condition of quietness and prosperity; and, with this view, laws for the protection of the inhabitants are generally enforced. But civil war, or intestine war, as we prefer to call it, allows of none of these palliations. It spreads throughout the entire length and breadth of a country, and devastates alike every section of the community; leaving no spot where the olive of peace may flourish and afford shelter to the innocent; and sparing no city which shall serve for a refuge to the timid. It desolates villages and farms, as well as towns and

* Gibbon.

capitals—carries the spirit of deadly animosity into every relation of life—setting neighbours against neighbours, servants against masters, and converting friends into foes;—nay, it penetrates into the sacred precincts of domestic life, and often infuses a Cain-like hatred into the hearts of brethren of the same womb. Such is intestine war, which owns no law and permits no neutrality. And, in the midst of this description of warfare, Poland groaned and bled, with scarcely the slightest intermission, from 1572 down to 1772.

Many of those who will read this pamphlet, have not the means or the leisure to investigate, as they otherwise ought undoubtedly to do, the history of the government ignorantly or mischievously praised, by some of our writers and speakers, under the name of the *republic* of Poland. Instead of such a government as we now understand in speaking of the American republics, it was a despotism one hundred thousand times worse than that of Turkey at this time, because it gave to 100,000 tyrants absolute power over the lives of the rest of the community. The annals of republican Poland, previously to its dismemberment, are nothing but a history of anarchy; and such is the title actually given to a work* that is only a horrible catalogue of tragedies, in which the nobles are the actors; who crowd the scenes with murders, fires, torturings, and famines, until the heart sickens with horror at the frightful spectacle.

* “*Histoire de l’Anarchie de Pologne et du Démembrement de cette République.*” Par C. Ruhlière. Paris : 1807. 4 vols. 8vo. The history of the Anarchy of Poland, *in four volumes octavo!*

For nearly the whole of the century immediately preceding the downfall of Poland, religious discord was added to the other incalculable miseries of this country, owing to the rise of sects of dissenters from the prevailing religion. Devastated by foreign and civil wars, and by famine and the plague, that followed in their train, the exhaustion of peace itself now served but to develope new miseries.* Fanaticism and bigotry armed themselves with the sword, as soon as it was abandoned by the worshippers of Mars; and they waged a warfare against the souls and bodies of their enemies with a fury that knew no bounds; dealing out anathemas over wretches expiring at the stake, pulling down churches, and even tearing up the graves of the dead! The historian who recounts the calamities that were showered upon the unhappy millions, the slaves, during this career of rapine and sacrilege, exclaims—"Oh! that some strong despot would come, and in mercy rescue these people from themselves!"

The intrigues of Russia did not at first promote the growth of this terrible disorder, as might be objected by some of our readers. That power was itself struggling against powerful enemies, and contending with the difficulties of internal reforms, down to within half a century of the period when the partition of Poland took place. Those wise reforms†

* "The flame of religious discord was now added, and the Jesuits took care that the fire should not be extinguished."—*Heeren*, vol. i. p. 334.

† "The nation (*the nobles*) carefully guarded against any reform, such as was taking place in Russia."—*Heeren*, vol. i. p. 328.

that gave to Russia, from the hands of Peter the Great, the seeds of a power which has since grown to such greatness, and which, if adopted by Poland, would have, in all probability, conducted her to a similar state of prosperity, were absolutely rejected by the profligate nobles, because they must necessarily have involved some amelioration of the fate of the people.

The picture we have drawn of Polish wickedness and corruption is not too highly coloured—or, if so it is not by us: we have given the names and works of the authors from whom we derive our information, and we appeal to them as the highest authorities in the literature of Europe. What have been the retributive consequences to empires, in all ages, of such a career of internal contention and profligacy as we have just described? What was the just fate of Persia, Greece, and Rome, after they had filled up the measure of their degeneracy? When the oak is decayed at its heart, the tree yields to the wind, and falls prostrate to the earth; a ship that is rotten no longer resists the pressure of surrounding water, and she disappears from the face of the ocean; if, in constructing a bridge, the foundation of the piers be despised and neglected, the entire edifice, superstructure and all, is overwhelmed in the stream. And, knowing that the immutable laws of nature govern equally the destinies of animated existence, shall we marvel to find that an empire which had for two hundred years been decaying to its very centre, whilst its boundaries presented no bulwark against the influx of raging enemies; which had all that

time exhibited the nobility wallowing in licentiousness, and the labouring population, that ought to be the foundation and support of a country, insolently despised and trampled under foot—ought we to wonder that such an empire at length reaped the sad harvest of its iniquities, and was prostrated or swallowed up by the force of surrounding nations? The fate of Poland was but a triumph of justice, without which its history would have conveyed no moral for the benefit of posterity. The annals of the world do not exhibit an example of a great nation—such, for instance, as Prussia, united, well governed, rising in intelligence, morals, and religion, and advancing in wealth and civilization—falling beneath the destroying hand of a conqueror. Such a catastrophe is reserved for the chastisement of the self-abandoned, depraved, disorganized, ignorant, and irreligious communities, and their anarchical governments—for Babylon and Persepolis—for Poland and Turkey! But, though the punishment was a righteous infliction, we need not vindicate the executioners. The murderer's sentence is just; but we are not therefore bound to tolerate the hangman.

But we have yet to shew, in the case of Poland, that the rod of affliction is administered by the great Ruler of the universe, in a spirit not of vengeance, but of mercy. We are now to prove—and without claiming for the instruments of the ameliorations the merit of designing such happy results, or presuming to say that the same or better effects might not have followed from more righteous causes—that the dismemberment of that empire has been followed by an

increase in the amount of peace, wealth, liberty, civilization, and happiness, enjoyed by the great mass of the people. We shall not touch upon the fate of those portions of the Polish territory which, at the partition, fell to the spoil of Austria and Prussia, further than to observe that the present condition of their inhabitants, particularly of those of the latter, is, when contrasted with that of any former era of their history, only to be compared to the state of the blessed in the Elysian regions, as opposed to the sufferings of Pandemonium.

Our business, however, lies with that portion of the (*miscalled*) Republic which fell to the share of Russia; and we shall, in the first place, allude to the present state of that section of the inhabitants which, from being by far the most numerous, ought, upon the soundest principle of justice, to attract the primary notice of the inquirer. Slavery no more exists in Poland: the peasant that tills the soil no longer ranks on a level with the oxen that draw his plough; he can neither be murdered nor maimed at the caprice of an insolent owner, but is as safe in life and limb, under the present laws of Poland, as are the labourers of Sussex or Kent. The modern husbandman is not restricted to mere personal freedom; he enjoys the right to possess property of all kinds—not even excepting land,* against which the nobles of ancient *republican* Poland opposed insuperable pro-

* "The whole of the lands are now alienable, and may be purchased by the peasants, and all other classes, except the Jews."—*Jacob's Report to the Lords*, 1826, p. 66.—This is the shameful exception in England!

hibitions. In a word, the peasantry of Poland now possess the control over their own persons and fortunes; and are at liberty to pursue happiness* according to their own free will and pleasure: which, after all that can be said for one government in preference to another, is nearly the amount of freedom that can be *felt* to be possessed by the great mass of any nation. Let it not be supposed that we wish to convey the impression that the labouring classes of the country under notice are elevated to an equality with the mechanics or husbandmen of England and America: from the very nature of circumstances, and from no one more than our iniquitous corn-laws—which have often starved our artisans in the midst of idle looms, and, at the same time, doomed the ploughman of Poland to nakedness or sheep-skins, whilst surrounded by granaries bursting with the best corn in the world—such an equality is, in our day, impossible. But to shew, in as few words as possible, what were the natural fruits, after fifteen years of peace and comparative good government, to a country that had, for two centuries, witnessed only the growth of discord, insecurity, and famine, let us quote from a volume† which bears intrinsic evidence of containing an authentic and candid compendium of the history of Poland:—

* “Some rare instances of perseverance, industry, and temperance, are to be found; and, unfavourable as their circumstances may be for the creation of such habits, they are here attended by the usual correspondent results. Some few peasants have been enabled to purchase estates for themselves.”—*Jacob's Report*, p. 66.

† Cabinet Cyclopædia—History of Poland, p. 269.

“The condition of the country had continued to improve beyond all precedent; at no former period of her history, was the public wealth so great or so generally diffused. Bridges and public roads, constructed at an enormous expense, frequently at the cost of the Czar’s treasury; the multitude of new habitations, remarkable for a neatness and a regard to domestic comfort never before observed; the embellishments introduced into the buildings, not merely of the rich, but of tradesmen and mechanics; the encouragement afforded, and eagerly afforded, by the government, to every useful branch of industry; the progress made by agriculture in particular, the foundation of Polish prosperity; the accumulation, on all sides, of national and individual wealth; and, above all, the happy countenances of the inferior classes of society—exhibited a wonderful contrast to what had lately been. The most immense of markets, Russia—a market all but closed to the rest of Europe—afforded constant activity to the manufacturer. To prove this astonishing progress from deplorable, hopeless poverty to successful enterprise, let one fact suffice. In 1815, there were scarcely one hundred looms for coarse woollen cloths;—at the commencement of the insurrection of 1830, there were six thousand.”*

* “Wherever Russia extended her sovereignty, there prevailed overwhelming tyranny, grinding oppression, unblushing venality, odious corruption, treacherous espionages, spoliation, moral degradation, and slavery. (Hear, hear.) What good did Russia ever accomplish? It was said that she might civilize the barbarian Turks: he believed they would hear no more about that, after the conduct of Russia towards Poland. *The Poles did not,*

But it will very naturally and properly be inquired —“How did it happen that the nation revolted against Russia in 1830, if the people enjoyed so much benefit from the connection with that empire?” We have thus far spoken only of the condition of the mass of the people; to answer this objection, it will be necessary to refer to another class, whose interests had always been opposed to the happiness and liberty of the population at large. From the moment when Poland was constituted a kingdom, at the treaty of Vienna, and made an appendage to the Russian crown, the nobles never ceased to sigh for their ancient liberty (*license*) of electing a king—*i.e.* of periodically selling themselves, by “a double auction,” as Heeren asserts, to the highest bidder. They sighed also, for those times when there was no law to protect the weak from their outrages; and when a reign of violence and disorder gave them perpetual occasions of making war upon each other, and of ravaging the unprotected provinces. The laws which were passed for the defence of the lives and properties of the peasants were regarded with jealousy* by the nobles, who viewed such enactments in the light of encroachments upon their privileges; and they looked back to the days when they alone constituted the *nation*, and all besides were but as the brutes of the field. It was not merely indirectly, however, that

as the House well knew, rise until goaded into madness by a series of oppressions before unheard of; the country was watered by the tears of its inhabitants.”—Lord Dudley Stuart’s Speech—House of Commons, Feb. 19, 1836.

* Heeren, vol. ii. p. 231.

the privileges of the aristocracy were curtailed ; one of the first acts of the Emperor Alexander being to restrict the use of titles to the possessors of property in that country where, *previously, the rank had descended to every son,* and continued to all their successors*, thus multiplying titles indefinitely, and adding, a thousandfold, to the mischiefs of conferring absolute power on a particular class, by suffering it to be frequently possessed by desperadoes or paupers. But the cause that, more than all others, had contributed to render the nobles discontented, was the long protracted peace, which deprived them of their accustomed occupation and revenue ; and which, however much it contributed to the happiness of the industrious agriculturists and traders, brought nothing but ruin and discontent to a body that retained too much of the pride and turbulence of character inherited from their warlike ancestors, to dream of descending to pursuits of a commercial or peaceful character. To present a clear view of the state of this *order* of society in Poland, we will extract a few lines upon the subject from the work of Mr. Jacob, before quoted. It will place his authority beyond question, if we remind our readers that he is the gentleman who was selected, by a Parliamentary committee, to make a journey through the northern portions of Europe, for the purpose of making to his employers a report of the corn trade of those regions. This individual—who was, of course, not only selected for his efficient powers of observation, but also for his character for honour and fidelity—in speaking,

* Jacob's Report, p. 60.

incidentally, of the state of society of Russian Poland, in his official report, makes this observation upon the Polish gentry:—"The Polish gentry are too proud to follow any course but the military career; and the government, by its large standing army, encourages the feeling, though the pay is scarcely sufficient to supply the officers with their expensive uniforms. Whatever difficulties may present themselves to the placing out young men of good family, none have had recourse to commerce; and, if they had, such would be treated by others as having lost their caste, and descended to a lower rank of society. The consequence is, that all the trade and manufactures of the country are in the hands of the Germans or the Jews."—The former seek to return home with the fortunes they make—the latter do not possess the full rights of citizenship, and cannot be expected to take great interest in the prosperity of the country.

The above account of the tone of feeling, and of the condition of the aristocratic party of Poland, written in 1825, accounts for the insurrection breaking out in 1830, when every other class of its inhabitants was in the enjoyment of unprecedented happiness and prosperity. *And we hesitate not emphatically to assert, that it was wholly, and solely, and exclusively, at the instigation, and for the selfish benefit, of this aristocratic fraction of the people, that the Polish nation suffered for twelve months the horrors of civil war, was thrown back in her career of improvement, and has since had to endure the rigours of a conqueror's vengeance.**

* The peasants joined, to a considerable extent, the standard of revolt; but this was to be expected in consequence of the in-

The Russian government was aware of this ; and its severity has since been chiefly directed towards the nobility.* In the ukase of the 9th (21st) November, 1831, directing that five thousand Poles should be transported into the interior of the empire, it is expressly provided that they be selected from the disaffected of the *order of the gentry*. And, in the order

fluence necessarily exercised over them by the superior classes. Besides, patriotism or nationality is an instinctive virtue, that sometimes burns the brightest in the rudest and least reasoning minds ; and its manifestation bears no proportion to the value of the possessions defended, or the object to be gained. The Russian serfs at Borodino, the Turkish slaves at Ismail, and the lazzaroni of Naples, fought for their masters and oppressors more obstinately than the free citizens of Paris or Washington did, at a subsequent period, in defence of those capitals.

* We cannot help alluding to the unfortunate natives of this country who are now seeking an asylum in England, and who belong entirely, we believe, to the class here referred to. Our allusion is to the system which sacrificed millions to hundreds of thousands, and not to persons, or even to generations of persons. Above all, we would except the unfortunate stranger that is now within our gates, imploring our help in a season of distress. In throwing himself upon our shores, the unhappy Pole evinced his generous belief that we would protect and succour him, and he will not discover that we want the power or the will to do either ; nor will we wait to inquire whether he be peer or peasant. The bird that, to escape from the tyrant of the skies, flies trembling to the traveller's bosom is secure ; base, indeed, would he be first to examine if his fluttering guest were a dove or a hawk. We cannot, however, approve of the lectures upon Polish history and literature, which have been delivered, in many parts of the kingdom, by some of these refugees. They convey erroneous pictures of the former condition of that country ; glossing over the conduct of the nobles, and suppressing all mention of the miserable state of the serfs.

issued to the Russian troops employed to quell the insurrection, they are required, under severe penalties, to respect the houses and property of the Polish peasants.

Now, we put it frankly to such of our readers as do not enjoy the leisure, or perhaps possess the taste for informing themselves of the subject in hand, excepting through the periodical press and the orations of public speakers, whether we were not justified in asserting that they have been cheated of their stores of compassion, by those who call forth public sympathy for the oppressed Polish people, by appealing to their former liberty, when the mass of the nation was in slavery; by deploring the tyranny of the Russian government, which has served to give security and protection to the great body of the poor, against the oppressions of the powerful nobles; by lauding the ancient prosperity, wealth, grandeur, and happiness of a country which, until the present age, was, at no period of its history, for fifteen successive years, exempt from civil or foreign war—from desolation, the plague, or famine;* and by imploring the Powers to restore the Polish nation to its condition previously to the first partition in 1772, which would be to plunge nineteen-twentieths of the inhabitants from freedom into bondage, from comparative happiness into the profoundest state of misery? But worse effects than the waste of a little misdirected philanthropy follow from these misrepresentations. The British indignation and hatred towards Russia† have

* See Appendix for extracts from history of Poland.

† The terms of abuse showered upon Nicholas in the British

been awakened, and those fierce passions have taken possession of the public mind throughout the kingdom so strongly as to place us in that most dangerous of all predicaments, where the majority is sufficiently excited, by national prejudice, to be brought within view of the hostile precipice, and only requires a further stimulus to plunge the country into the horrible gulf of war. And who and what are the writers and speakers that have made the subject of Poland the vehicle for conducting public opinion to the verge of such a catastrophe? Are they cognizant, or are they unaware of the merits of the question which we have now been faithfully discussing? In either case, out upon such quackery! The empiric who, under pretence of healing their bodily disorders, fires the blood or deranges the bowels of his patients, suffers the penalty of homicide for the death of his victim, without inquiry whether the destructive nostrum was ignorantly or knowingly administered. And how long shall political quacks be permitted, without fear of punishment, and with no better justification than

legislature are new in taste; and we think, when applied to a potentate at peace with us, such epithets as monster, Herod, miscreant, &c., are not improvements upon the terms that we find in the earlier volumes of Hansard. In any case, would such language be honourable to the Parliament? Supposing a war should follow, is it dignified to precede hostilities with vituperative missiles? Spring and Langan set to with a better grace, by shaking hands at the scratch: the rules of the Fives-court had better be transcribed for the benefit of St. Stephen's. We are told, indeed, that it is a just manifestation of public opinion. We have heard similar expressions of opinion at Billingsgate and Clare Market, and have observed that they sometimes lead to blows, *but never to conviction.*

the plea of ignorance, to inflame the minds and disorder the understandings of a whole nation, by stimulating them to a frenzy of hatred towards a people more than a thousand miles distant, and preparing them for probably millions of murders, by administering, unchecked, their decoctions of lies, their compounds of invention and imposture, or their deadly doses of poisoned prejudice, gilded with spurious philanthropy?

We have thus (in allusion to the objections of those who take exceptions to Russian aggrandizement upon the ground that the encroachments of that power are always accompanied by the infliction of barbarous oppressions upon the conquered nations) shewn that, in all cases where neighbouring states have been annexed to that empire, the inhabitants have thereby been advanced in civilization and happiness. We have, in the case of Poland, which has undoubtedly benefited more than any other country by its incorporation with Russia, dwelt at greater length upon this point, both because we believe that the impression above referred to is all but universal in reference to this people, and because we are convinced that from this erroneous idea originates nearly all the hostility which, in just and generous minds—and they are the great majority—is entertained towards the Russian government and people.

In examining the various grounds upon which those who discuss the subject take up their hostile attitudes towards the Russian nation, we have—with infinite surprise, and a deep conviction of the truth that a century of aristocratic government, and

consequent foreign interference, have impregnated all classes with the haughty and arrogant spirit of their rulers—discovered that Great Britain has been argued into a warlike disposition against that remote empire, without one assignable motive or grievance which could have even engendered a tone of resentment from our public writers and speakers, had they been actuated only by the principles of common sense, modest forbearance, and a regard for the benefit of the people. We have sought in vain for cases of insult to *our* flag; for an example of spoliation committed upon *English* merchants; for the appearance of hostile fleets in British waters, threatening our shores; for the denial of redress for injuries inflicted; for the refusal to liquidate some just debt: we have sought for such wrongs as these at the hands of the Russian government, to justify an appeal to menaces, and a call for armaments from our Russo-maniac orators and writers; but we find only charges of spoliation of Turkish territory, assaults upon Poland, intrigues with Persia, designs upon Sweden, and conquests in Georgia—affairs with which we have less interest in embroiling ourselves, than we have with the struggle now raging in the province of Texas, between the Americans and Mexicans!

If we refer to the speech of Lord Dudley Stuart, before alluded to, (which is a compendium of all the accusations, suppositions, fears, dangers, and suspicions of which the subject is susceptible,) we shall find an alarming picture given of the future growth of Russian dominion. Turkey, it seems, is to be only the germ of an empire, which shall extend not merely

from "Indus to the Pole," but throw forth its arms over Europe and Asia, and embrace every people and nation between the Bay of Bengal and the English Channel! Turkey once possessed, and the devouring process begins. Austria and all Italy are to be swallowed up at a meal; Greece and the Ionian Islands serving for side-dishes. Spain and Portugal follow as a dessert for this Dando of Constantinople; and Louis Philippe and his empire are washed down afterwards with Bordeaux and Champagne. Prussia and the smaller German States, having wisely formed themselves into a trades-union of some thirty or forty millions, might be supposed by some persons to be secure from this tyrannical master. Nothing of the kind! His Lordship has discovered that this is a mere trick of Russia for making them a richer prey. The German goose is only penned in this Prussian league, that it may fatten and be worthier of the fate that awaits it: when Michaelmas arrives, it will be served up, in due state, to the Russian eagle. Belgium, Sweden, Denmark, and Holland are to be but as *entremets* for this national repast. And Persia, Egypt, Arabia, and India, in one large bouquet, will furnish the exotics to perfume and adorn this banquet of empires!* One trifling matter, however,

* "Russia, as honourable members must be well aware, was not at the least pains to disguise her dissatisfaction at the present state of affairs in the Peninsula; and with a frontier so far advanced as hers now was, could any man living doubt that she would very soon adopt plain modes of making that dissatisfaction felt? He repeated, that, with a frontier so far advanced, Italy was not safe from her grasp; and Russia once established there, the consequences to Austria must be tremendous. Russia was

Lord Stuart altogether forgets to take into account: he omits to say how all the viands shall be paid for; in other words, in what way the Russian Chancellor of the Exchequer will make good his budget, when called upon to clothe, feed, and pay armies, to conquer a dozen powerful nations, some of them richer than the conqueror—to meet the expenses of *materiel*, to furnish the commissariat, hire baggage waggons, charter transports, and to cover the thousand other

surrounding—was enveloping Austria. Turkey would soon fall a prey to her lust of extended dominion. Greece would be a mere province of Russia—indeed, already, Greece was subjected to her influence; and she scarcely hesitated to menace France. . . . He would again say that the whole of the Prussian league was at the instigation of Russia, the former being the mere creature of the latter. When the present designs of Russia were accomplished, they would soon see how she was becoming jealous of Prussia, and a pretext would not be long wanting for the destruction of that instrument which the great northern power had used in erecting and confirming its own ascendancy. Prussia was prepared to do everything which Russia might dictate, for the purpose of forwarding her designs; but she might fully anticipate this—that, as soon as the plans of the Autocrat were matured, he would *in a day (!)* dismember and pull down his present allies; and after that, Austria could not long resist. Then, in another quarter of her great empire, let them only look at the advantages possessed by Russia. She had military stations within thirty miles of the western coast of Norway. . . . That country could furnish sailors inferior to none in the world, and the whole district abounded with timber of the best quality. *Russia would then become a naval power of the first order, (!)* and might be joined by the Americans or the Dutch, to the manifest disadvantage of England.” (!)—*Times’ report of Lord Dudley Stuart’s speech, Feb. 19, 1836.*

These sentiments appear to have been delivered with gravity, and listened to by the House of Commons without a smile!

outgoings, including even the frauds and impositions incidental to a state of warfare. His Lordship forgets this; and in doing so, calls to our recollection a dream—our readers have probably experienced something of the kind—in which we found ourselves buoyed up in the air, and borne along, we could not tell how. It was not walking, flying, or swimming; yet on we glided through space, quite independent of all the laws of nature—hills disappearing, rivers drying up, seas changing into terra firma, trees, walls, and castles vanishing at our approach; despising all the usual impediments of sublunary travelling, caring no more for inns than if we had been a shooting star, and regardless, like Halley's comet, of a change of horses—on we went, with no luggage to look after, or hotel bills to settle, or postillions to pay, till, alas! we awoke, and discovered that we were only a mortal biped, trammelled by the law of gravitation, and enslaved by the rules of political economy—privileged but to travel along coarse dirty roads, and compelled, before starting, not only to calculate the cost of the journey, but to put the money in our purse for coaches, steamboats, turnpike gates, and inns, as well as their waiters, boots, porters, and chambermaids—besides a round sum to cover extortions, if we would keep our temper. Now, Lord Stuart's case was precisely similar to ours, with the exception that he did not awake from his vision of supernatural locomotion. But, to be serious: To those who resort, as a crowning bugbear, to the threats of universal sovereignty as the ultimate aim of the Russian government, we have already, in some degree, replied, by

shewing the weakness of that empire, as exemplified in its uncultivated surface; in the scattered position of its uncivilized people--their poverty, ignorance, and diversified character; and in the circumstance of its being behind Great Britain and other countries, in the march of improvement and discovery.

But we can appeal to other facts, and to experience, to disprove the exaggerated views that are put forth respecting the power of Russia; and in no instance were her weakness and inability to concentrate and support an army, more fully illustrated than at the invasion of her territory by Bonaparte. At the battle of Borodino—which was the first great affair that took place between the French and the forces of the Czar—we find, notwithstanding the alarm of invasion had been trumpeted through Europe eighteen months previously, that the number of combatants brought, on that bloody day, to the defence of their native soil, only amounted to 120,000 men, of whom a large portion were without uniforms or arms, excepting scythes or other similar weapons. Now, to illustrate the very superior strength of a nation whose inhabitants are at once concentrated and rich, let us suppose so absurd a circumstance as that Russia, after eighteen months of open preparation and threatening, were to march an army of nearly half a million of soldiers into England; should we be found, after so ample a warning, opposing only 120,000 fighting men, and that number only half armed and clothed, in defence of our homes, our wives and daughters, in the first battle-field? London alone could furnish and equip such an army, in so great a cause, within

six months! Nor did the deficiency of numbers arise from want of patriotism. On the contrary, the Russians fought with unequalled ardour and bravery;* and the only reason that Napoleon's troops were not on that occasion overwhelmed by ten times their force, is, that the government had not money to pay for transporting its subjects from remote provinces to the scene of action, or funds to provide arms and support them when collected together.

It has been well observed, by a very sound authority,† that China affords the best answer to those who argue that Russia meditates hostile views towards our Indian possessions. China is separated from Russia by an imaginary boundary only; and that country is universally supposed to contain a vast deposit of riches, well worthy of the spoiler's notice. Besides, it has not enjoyed the "*benefit*" of being civilized by English or other Christian conquerors—an additional reason for expecting to find a wealthy pagan community, waiting, like unwrought mines, the labours of some Russian Warren Hastings. Why, then, does not the Czar invade the Chinese empire,‡

* Regiments of peasants, who till that day had never seen war, and who still had no other uniform than their grey jackets, formed with the steadiness of veterans, crossed their brows, and having uttered their national exclamation, "*Gospodee pomilouï nas !*"—God have mercy upon us!—rushed into the thickest of the battle.—*Scott's Napoleon*, chap. 77.

† *Spectator* newspaper, No. 386.

‡ Unless his Muscovite Majesty should adopt this suggestion quickly, there appears some chance that England may be before him at Pekin. We perceive that some of our writers are anxious that we should send some ships of war to compel the Chinese

which is his next neighbour, and contains an unravaged soil, rather than contemplate, as the alarmist writers and speakers predict he does, marching three thousand miles over regions of burning deserts and ranges of snowy mountains, to Hindostan, *where he would find that Clive and Wellesley had preceded him?* The reason for such forbearance is, at the present day, as it was when that splendid but immoral genius, Catherine, proposed to undertake this very expedition—that *there was not in Russia sufficient available wealth to transport across its own surface an army large enough to subjugate the Chinese.* How, then, will they reach India through enemies' territories, and in spite of the power and influence of England? To warrant the attempt, the Czar ought to possess, at least, the command of one hundred millions sterling. Last year, he required but one million and a quarter;* for which he was compelled to solicit the aid of the capitalists of western Europe, and found

government to open other ports to our vessels, besides Canton, and to dictate certain other regulations for carrying on trade with us, which they are good enough to suggest to his Celestial Majesty. Could not our ships of war call in on the way, and compel the French people to transfer the trade of Marseilles to Havre, and thus save us the carriage of their wines and madders through the Straits of Gibraltar? Why should not they force the Americans to restrict the export of their cotton to New York, rather than to suffer the growth of Savannah and Mobile? Well may the Chinese proclaim us "*outside barbarians*;" for, verily, this is outside barbarous morality!

* Double the amount might be raised without difficulty, upon sufficient security, in Manchester, in less than forty-eight hours, if the profit or other motive offered an adequate inducement.

great difficulty, even after pledges of peace and protestations of good behaviour, in obtaining the necessary loan !

“Russia once in possession of Constantinople, and farewell to the liberties of Europe !” is the cry of those who are “*possessed*” with the dread of Muscovite ambition ; and the very repetition of this prophecy is calculated to produce believers in its truth. *How* it is that Russia is to conquer one hundred millions of people, superior to her own population in wealth, freedom, instruction, and morality, and armed with all the superiority of power which an ascendancy in those qualities ever has, and always will bestow upon civilized communities over barbarous nations—not one of those writers and speakers has condescended to explain ; the ways and means are studiously avoided, or disregarded as of no consequence. Yet, that Russia possesses no superhuman properties, which enable her to disregard the ordinary impediments of nature, we have already shown, in the example of her inability, when attacked, to resist the invader, owing to the want of the money, food, arms, and clothing, necessary for the transport and maintenance of large armies. With such an example of her weakness in defensive operations as we have just given, we need not be surprised that we have very abundant proofs of the feebleness of that empire when engaged in aggressive warfare. All the hostilities carried on between Russia and her barbarous neighbours, Turkey and Persia, have been full of evidences of the difficulty with which the first Power achieved her successive conquests, and the precarious tenure by

which she has held them. Indeed, the last war with Turkey was, from the combined causes of deficient means of transport, defective commissariat supplies, and want of hospitals—all arising from the poverty of the government—protracted so long, and attended with so great a loss of life to the invaders, that it left no doubt, with reflecting minds, of the incompetency of Russia to sustain a war of aggression with Prussia, Austria, or any other civilized state.

But Poland is the best and latest witness of the weakness and poverty of Russia. Notwithstanding that the insurrection in that country broke out at a moment when the preparations were not matured (owing to the rashness of the military youths of Warsaw,) and although the natives possessed no strong places, as in Belgium, and their territory is destitute of mountain fastnesses, such as are found in Spain, Scotland, or Switzerland; yet a mere handful of insurgents baffled the whole power of the Czar for twelve months—several times defeating his ill-equipped armies with great slaughter; and at last were subdued only through the perfidy of the Prussian authorities. Surely, with this experience of Russian weakness and poverty to appeal to, we need not refer to the dangers apprehended for France, Germany, and Spain, unless it be to ask whether a British Parliament, possessing so many unsatisfied claims upon its time and attention at home—from two millions of paupers in a neighbouring island, declared by authority to be without the means of subsistence; from the Dissenters of this kingdom, and the Catholics of Ireland; and from the discontented

tax-payers at large—whether the British legislature might not, very properly, leave the care of those independent and powerful empires to their own governments, at least for the present, until the business of the united empire shall have been more satisfactorily dispatched.

We shall, however, be told that, in arguing for the weakness of this empire from past experience, we lose sight of the difference between Russia in the Baltic and Russia in the Mediterranean. “The government of St. Petersburg once transferred to Constantinople, and Russia thenceforth becomes the first maritime power in Europe,” is the universal cry of the alarmists. *How?* Oh, the oaks of Bosnia, which are the finest in the world for shipbuilding, would be then at her command! But where would the sailors be found by a power possessing no mercantile marine? Napoleon thought vainly to create a navy from those very forests; he ordered tools to be forged in the country, and roads to be cut, by which the French legions might penetrate into Illyria, and the oaks of Bosnia be thus transported to the harbours of the Adriatic. He, moreover, contrived to bring the forests of Switzerland to Antwerp, by constructing the famous shoot down the side of Mount Pilatus. The timber rotted in his harbours; for how could the navies arise, whilst England commanded the trade of the ocean? Napoleon Bonaparte was a madman in all that related to commercial science; and his disastrous fate was the inevitable consequence: but they who, with his example before them, can assume the existence of the largest navy

in the world, *in the possession of a people whose carrying trade is in the hands of another nation*, without the previous growth of manufactures and commerce, are, in that particular, more hopelessly mad than the Corsican usurper. As well and as wisely might they assume the existence of the ripened harvest when no seed had been sown, or reckon on the growth of a city where neither builders nor inhabitants had ever existed ! Until Russia becomes a great trading empire, she will not be in even the path for surpassing us in naval power. We have elsewhere shown that she cannot enlarge her commerce without thereby enriching us, even more than any other people : how then can Russia hope to become equal to ourselves upon the ocean, unless England should, for the purpose of enabling her to do so, resolve to stand still ?*

But supposing that Russia were to seize the first moment of her occupancy of Turkey to begin to build ships of war, and, by the aid of Greek sailors, to man a fleet at Constantinople ; and presuming, moreover, that, having obtained violent possession of Norway, she were to employ similar means for erecting a

* When the measures for conciliating the respective commercial interests of parties in the Irish union were arranging, the opinion of practical men was taken as to the period at which the cotton manufacture of Ireland might be able to go on, in competition with that of England, without the help of protecting duties ; and Mr. William Orr of Dublin, who had introduced the manufacture into that country, was asked if he thought it likely that, in ten years, the Irish manufacturers would overtake the English in skill ? Mr. Orr replied—" Yes ; if the English can be persuaded during that time to stand still."

naval power in the Baltic—let us then call the attention of our readers to the defenceless and dependant position in which her territory would be placed, owing to the peculiar geographical features of those quarters of the globe. The sole outlet for the waters of the Sea of Marmora and the Black Sea, is by the canal of the Dardanelles, called the Hellespont; a passage whose navigable width scarcely exceeds two thousand yards for a length of nearly thirty miles. To blockade the entrance of this Strait would require that a couple of ships of the line, a frigate, and a steamer, should be stationed at its mouth; and with no larger force than this might the egress of any vessel be prevented from the interior seas; and not only so, but, as these four men-of-war would constitute, in the eyes of all foreign powers, and according to the law of nations, a sufficient blockade, they would deprive Constantinople and the whole Turkish empire of all foreign trade; besides shutting out from the commerce of the Mediterranean Sea, and the rest of the world, the entire coast of the Euxine, and its thousands of miles of tributary rivers. If we now transfer our attention to the northern portions of the Russian empire, we shall find that the passage of the Sound, through which all the trade of the Baltic is compelled to pass, is scarcely less narrow than that of the Hellespont; and, provided Russia had gained possession of the interior of these Straits, according to the supposition of the alarmists, then half a dozen ships of war might hermetically seal the whole of northern Europe against the trade of the world. In short, Russia, with the addition of Turkey, would

possess but two outlets, each more contracted than the River Thames at Tilbury Fort; and, as these could be declared in a state of blockade by less than a dozen vessels of war, it is clear that nature herself has doomed Russia to be in a condition of the most abject and prostrate subjection to the will of the maritime powers. This is a point of paramount importance in estimating the future growth of the country under consideration. It should never be lost sight of for a moment, in arguing upon the subject, that Russia, in possession of Turkey and all the coasts of the Black Sea, besides her present stupendous expanse of territory, would still be denied, by the hand of nature herself, a navigation of more than three miles in width, to connect her millions of square leagues of territory with the rest of the globe—a peculiarity the more striking since it could not be found to exist in any other quarter of the earth. It is deserving of notice, that these two narrow straits which guard the entrances to the Black Sea and the Baltic, are nearly six months sail distant from each other; and the track by which alone they can communicate lying through the Straits of Dover and of Gibraltar, it must be apparent that, were Russia the mistress of those channels, she could not pass from the one to the other, unless she were in amicable connection with Great Britain.*

* During the war between Russia and the Porte, in 1791, the government of St. Petersburg, anxious to send a fleet to attack the Turkish power in the Archipelago, requested permission of the Dutch and English to be allowed to refit the vessels and take in stores at one of their ports; and failing in this application, the expedition was abandoned.

There remains but one more point requiring our consideration in connection with the abstract question of Muscovite aggrandizement. They who predict the unbounded extension of Russia, forget the inevitable growth of weakness which attends the undue expansion of territorial dominion.* Not only can they foresee, without difficulty, the conquest of Germany, France, Spain, Persia, and India, but they are, at the same time, blind to the dangers which must attend the attempt to incorporate into one cumbrous empire, these remote and heterogeneous nations. In all ages and climes nature has given the boundaries for different communities; and we find that not only are the several families of the earth generally enclosed by seas or mountains, to mark the limits of their respective territories, but the rivers usually flow through lands inhabited by people of one language—thus constituting a double natural line of demarcation. For example, the Alps and the Pyrenees afford the barriers beneath the opposite sides of which repose the French, Spanish, and Italian nations—within which arise the Rhone and Garonne of France, the Tagus and Guadalquiver of the Peninsula, and the Po and Adige of Italy; each of which may be almost said to water integral

* “In large bodies the circulation of power must be less at the extremities: Nature herself has said it. The Turk cannot govern Egypt as he governs Thrace, nor has he the same dominion in the Crimea and Algiers which he has at Brusa and Smyrna. Despotism itself is obliged to truck and huckster; the Sultan gets such obedience as he can; he governs with a loose rein that he may govern at all: it is the eternal law of extension and detached empire.”—BURKE.

countries. And, seeing that these allotments of the earth's surface are sufficiently defined by the hand of nature, to have drawn together, in the earliest ages, the scattered seed of Adam into separate and distinct families, how infallibly shall the same natural limits suffice to *preserve* those distinctions, when aided by those potent safeguards of nationality, the diversified histories, religions, languages, and laws of ancient and powerful empires! These are reflections that do not seem to have occurred to those writers who assign the sovereignty of Europe and Asia over to Russia; and, even if they had crossed their minds, such trifling impediments could hardly have discouraged them, after having surmounted so much greater obstacles. For assuredly they who can bestow upon Russia the supremacy of the seas, whilst her carrying trade is in the hands of England—or who can award her the victory over rich, united, and powerful nations, without the previous possession of money, *materiel*, or provisions for her armies—need not be daunted by such trifling natural difficulties as the Himalayas or the Alps present against the concentrations of a government over her conquests; or feel a moment's alarm about regulating with the same tariff the commerce of the Rhine, Danube, Neva, and Ganges.

We have now, we believe, noticed every argument with which it has been the custom to urge us to participate in Russian and Turkish quarrels and intrigues; and we have endeavoured to show, by a candid appeal to facts, that the dangers with which we are threatened in our commerce, colonies, or

national dominion, from the power of Russia, are chimerical. We have likewise shown that the prejudices existing in the minds of the British people against that Power, and which have been industriously fostered by the writers and speakers of the day, are founded in delusion and misrepresentation; that the spread of Russian empire has invariably increased, instead of diminishing the growth of civilization and commerce; that she owes her extension less to her own forces, which we have shown to be weak, than to the disunion or barbarism of her neighbours; and that the very nature of her geographical position must always keep her in dependence upon the good will of other maritime powers. Where, then, are the motives—seeing that Russia has not inflicted the slightest wrong upon *us*, or even contemplated one substantial injury to *our* people—for the warlike spirit which now pervades the current writings and speeches upon the subject of that nation? *We do not know—for we have not been able in our researches upon this subject to discover—one solitary ground upon which to found a pretence, consistent with reason, common sense, or justice, for going to war with Russia.*

CHAPTER III.

THE BALANCE OF POWER.

Mischievous Passion of the English for Intermeddling with Foreign States.—Supposed necessity of maintaining “an imposing attitude.”—The Balance of Power defined.—Inconsistency of the Definitions.—Chimerical Nature of said Balance.—Lord Bacon’s Policy of Nations.—Claims of the Turks to the Protection of the “Balance.”—Inconsistency of the Advocates of the Balance of Power.—The Americans and the Balancing System.—Sound Policy of the United States.

OUR object has not only been to deprecate war as the greatest evil that can befall a people, but to show that we have no interest in maintaining the *statu quo* of Turkey; and, consequently, that the armaments which, in a time of peace, are maintained, at an enormous cost, for the purpose of making demonstrations in favour of that country, and against Russia, might be reduced, and their expense spared to the tax-payers of the British empire.

We shall here be encountered with a very general prepossession in favour of our maintaining what is termed a rank amongst the states of the Continent—which means, not that we should be free from debt, or that our nation should be an example to all others for the wealth, education, and virtues of its people, but that England shall be consulted before any other countries presume to quarrel or fight; and that she shall be ready, and shall be called upon, to take a part in every contention, either as mediator, second,

or principal. So prevalent and so little questioned has this egotistical spirit become, that, when an honourable member rises in Parliament, to call upon a minister of the crown to account for some political changes in Spain, Portugal, or Turkey—instead of the question encountering the laughter of the House (as such an inquiry would probably do from the homely representatives who meet to attend to their constituents' affairs at Washington), or the questioner being put down by the functionary, with something after Cain's answer, "Am I the Spaniard's keeper?"—the latter offers grave explanations and excuses, whilst the audience looks on with silent attention, as though every word of our foreign secretary were pregnant with the fate of nations bowing to his sway.

If we go back through the Parliamentary debates of the last few reigns, we shall find this singular feature in our national character—the passion for meddling with the affairs of foreigners—more strikingly prominent in every succeeding session; and, at the breaking out of the French Revolution, the reader is astonished to see that the characters of the leaders of the mobs of Paris, Marseilles, and Lyons, and the conduct of the government of France, became the constant subjects of discussion in the House of Commons, almost to the exclusion of matters of domestic interest—Pitt and Burke on one side, and Fox, Grey, and Sheridan on the other, attacking and defending the champions of the Revolution, with the same ardour as if the British legislature were a responsible tribunal, erected over the whole of Christendom, and endowed with powers to

decide, without appeal, the destinies of all the potentates and public men of Europe.* Unhappily, the same passion had impregnated the minds of the public generally (as it continues to do down to our own day), and the result was, as everybody knows, the Bourbon crusade. But England, in taking upon herself to make war with the spirit of the age, encountered the Fates; and, instead of destroying that infant freedom which, however monstrous and hideous at its birth, was destined to throw off its bloody swathes, and, in spite of the enmity of the world, to dispense the first taste of liberty to Europe—*she was herself the nurse that, by her opposition, rocked the French Revolution into vigorous maturity.*

Our history during the last century may be called

* That this spirit still survives in full vigour, may be shown by the motion recently made in the House of Commons, by Mr. T. Duncombe, for interceding with the French Government in behalf of the state prisoners at Ham. Prince Polignac and his confederates attempted, by their *coup d'etat*, to deprive France of law, place the whole country in the hands of despots, and reduce it to the monkish ignorance of the middle ages, by giving again to priests and bigots the absolute power over the printing press. In this attempt they failed; but freedom conquered at the cost of hundreds of victims. *In England, or any other country but France, those ministers would have suffered death.* Yet, after five years of confinement, behold us interfering with the course of justice, in an empire with whose internal concerns we are no more entitled to mix than with those of China!

Within a week of this display, a lad was transported from Macclesfield for fourteen years, *for stealing a pair of stockings!* We recommend this to our facetious Gallic neighbours, as a fit opportunity for intervention: the mother should be induced to write her case to M. Odillon Barrot, or some other popular member of the Chamber of Deputies.

the tragedy of "British intervention in the politics of Europe;" in which princes, diplomatists, peers, and generals, have been the authors and actors—the people the victims; and the moral will be exhibited to the latest posterity in 800 millions of debt.

We have said that our proposal to reduce our armaments will be opposed, upon the plea of maintaining a proper attitude, as it is called, amongst the nations of Europe. British intervention in the state policy of the Continent has been usually excused under the two stock pretences of maintaining the balance of power in Europe, and of protecting our commerce; upon which two subjects, as they bear indirectly on the question in hand, we shall next offer a few observations.

The first instance in which we find the "balance of power" alluded to in a king's speech, is on the occasion of the last address of William III. to his parliament, December 31, 1701, where he concludes by saying—"I will only add this—if you do in good earnest desire to see England *hold the balance of Europe*, it will appear by your right improving the present opportunity." From this period, down almost to our time (latterly, indeed, the phrase has become, like many other cant terms, nearly obsolete), there will be found, in almost every successive king's speech, a constant recurrence to the "balance of Europe;" by which, we may rest assured, was always meant, however it might be concealed under pretended alarm for the "equilibrium of power" or the "safety of the Continent," the desire to see England "hold the balance." The phrase was found to

please the public ear ; it implied something of equity ; whilst England, holding the balance of Europe in her hand, sounded like filling the office of Justice herself to one-half of the globe. Of course, such a post of honour could not be maintained, or its dignity asserted, without a proper attendance of guards and officers ; and we consequently find that, at about this period of our history, large standing armies began to be called for ; and not only were the supplies solicited by the government, from time to time, under the plea of preserving the liberties of Europe, but, in the annual mutiny bill (*the same in form as is now passed every year*), the preamble stated, amongst other motives, that the annual army was voted for the purpose of *preserving the balance of power in Europe*. The “balance of power,” then, becomes an important practical subject for investigation ; it appeals directly to the business and bosoms of our readers, since it is implicated with an expenditure of more than a dozen millions of money per annum, every farthing of which goes, in the shape of taxation, from the pockets of the public.

Such of our readers as have not investigated this subject, will not be a little astonished to find a great discrepancy in the several definitions of what is actually meant by the “balance of power.” The theory—for it has never yet been applied to practice—appears, after upwards of a century of acknowledged existence, to be less understood now than ever. Latterly, indeed, many intelligent and practical-minded politicians have thrown the question overboard, along with that of the balance of trade—

of which number, without participating in their favoured attributes, we claim to be ranked as one. The balance of power—which has, for a hundred years, been the burden of kings' speeches, the theme of statesmen, the ground of solemn treaties, and the cause of wars—which has served, down to the very year in which we write, and which will, no doubt continue to serve, for years to come, as a pretence for maintaining enormous standing armaments, by land and sea, at a cost of many hundreds of millions of treasure—the balance of power is a chimera! It is not a fallacy, a mistake, an imposture—it is an undescribed, indescribable, incomprehensible nothing; mere words, conveying to the mind not ideas, but sounds like those equally barren syllables which our ancestors put together for the purpose of puzzling themselves about words, in the shape of *Prester John*, or the *philosopher's stone*! We are bound, however, to see what are the best definitions of this theory.

“By this balance,” says Vattel, “is to be understood such a disposition of things as that no one potentate or state shall be able, absolutely, to predominate and prescribe laws to the others.”—*Law of Nations*, b. 3, c. 3, § 47.

“What is usually termed a balance of power,” says Gentz, “is that constitution subsisting among neighbouring states, more or less connected with one another, by virtue of which no one among them can injure the independence or essential rights of another without meeting with effectual resistance on some side, and, consequently, exposing itself to danger.”—*Fragments on the Political Balance*, c. 1.

“The grand and distinguishing feature of the balancing system,” says Brougham, “is the perpetual attention to foreign affairs which it inculcates; the constant watchfulness over every nation which it prescribes; the subjection in which it places all national passions and antipathies to the fine and delicate view of remote expediency; the unceasing care which it dictates of nations most remotely situated, and apparently unconnected with ourselves; the general union which it has effected of all the European powers, obeying certain laws, and actuated in general by a common principle; in fine, the right of mutual inspection, universally recognised, among civilised states, in the rights of public envoys and residents.”—*Brougham’s Colonial Policy*, b. 3, § 1.

These are the best definitions we have been able to discover of the system denominated the balance of power. In the first place, it must be remarked that, taking any one of these descriptions separately, it is so vague as to impart no knowledge even of the writer’s meaning; whilst, if taken together, one confuses and contradicts another—Gentz describing it to be “a constitution subsisting among neighbouring states more or less connected with each other;” whilst Brougham defines it as “dictating a care of nations most remotely situated, and apparently unconnected with ourselves.” Then it would really appear, from the laudatory tone applied to the system by Vattel, who says that it is “such a disposition of things as that no one potentate or state *shall be able* absolutely to predominate and prescribe laws to the others;” as well as from the complacent manner in

which Brougham states "the general *union which it has effected* of all the European powers, obeying certain laws, and actuated in general by a common principle"—it would seem, from such assurances as these, that there was no necessity for that "perpetual attention to foreign affairs," or that "constant watchfulness over every nation," which the latter authority tells us, the system "prescribes and inculcates." The only point on which these writers, in common with many other authors and speakers in favour of the balance of power, agree, is in the fundamental delusion that such a system was ever acceded to by the nations of Europe. To judge from the assumption, by Brougham, of a "general *union* among all the European powers;" from the allusion made by Gentz to that "*constitution* subsisting among neighbouring states;" or from Vattel's reference to "*a disposition of things*," &c.—one might be justified in inferring that a kind of federal union had existed for the last century throughout Europe, in which the several kingdoms had found, like the States of America, uninterrupted peace and prosperity. But we should like to know at what period of history such a compact amongst the nations of the Continent was entered into? Was it previously to the peace of Utrecht? Was it antecedent to the Austrian war of succession? Was it prior to the seven years' war, or to the American war? Or did it exist during the French revolutionary wars? Nay, what period of the centuries during which Europe has (with only just sufficient intervals to enable the combatants to recruit their wasted energies) been one vast and continued

battle-field, will Lord Brougham fix upon, to illustrate the salutary working of that “balancing system” which “places all national passions and antipathies in subjection to the fine and delicate view of remote expediency?”

Again, at what epoch did the nations of the Continent subscribe to that constitution, “by virtue of which,” according to Gentz, “no one among them can injure the independence or essential rights of another?” Did this constitution exist, whilst Britain was spoiling the Dutch at the Cape, or in the East?—or when she dispossessed France of Canada?—or (worse outrage by far) did it exist when England violated the “essential rights” of Spain, by taking forcible and felonious possession of a portion of her native soil?*

Had this constitution been subscribed by Russia, Prussia, and Austria, at the moment when they signed the partition of Poland?—or by France, when she amalgamated with a portion of Switzer-

* The conquests of colonies have been regarded with some complacency, because they are merely, in most instances, reprisals for previous depredations by the parent state: but England for fifty years at Gibraltar, is a spectacle of brute violence, unmitigated by any such excuses. Upon no principle of morality can this unique outrage upon the integrity of an ancient, powerful, and renowned nation—placed at a remote distance from our shores—be justified: the example, if imitated, instead of being shunned, universally, would throw all the nations of the earth into barbarous anarchy, and deprive mankind of the blessings of law, justice, and religion. It is time not only to think, but to speak, of these things in a spirit of honest truth. The people of this country—the middling and working classes—have no interest, as we shall by and by have to show, in these acts of unjust aggression and foreign violence.—Alas for the cause of morals, if they had

land?—by Austria, at the acquisition of Lombardy?—by Russia, when dismembering Sweden, Turkey, and Persia?—or by Prussia, before incorporating Silesia?

So far from any such confederation having ever been, by written, verbal, or implied agreement, entered into by the “European powers, obeying certain laws, and actuated in general by a common principle;” the theory of the balance of power has, we believe, generally been interpreted, by those who, from age to age, have, parrot-like, used the phrase, to be a system invented for the very purpose of supplying the want of such a combination. Regarding it for a moment in this point of view, we should still expect to find that the “balancing system” had, at some period of modern history, been recognised and agreed to by all the Continental states; and that it had created a spirit of mutual concession and guarantee, by which the weaker and more powerful empires were placed upon a footing of equal security, and by which any one potentate or state was absolutely unable “to predominate over the others.” But, instead of any such self-denial, we discover that the balance of Europe has merely meant (if it has had a meaning) that which our blunt Dutch king openly avowed as his aim to his parliament—a desire, on the part of the great powers, to “*hold the balance of Europe.*” England has, for nearly a century, held the European scales—not with the blindness of the goddess of justice herself, or with a view to the equilibrium of opposite interests, but with a Cyclopean eye to her own aggrandizement. The same lust of conquest has actuated, up to the measure of

their abilities, the other great powers ; and, if we find the smaller states still, in the majority of instances, preserving their independent existence, it is owing, not to the watchful guardianship of the “balancing system,” but to the limits which nature herself has set to the undue extension of territorial dominion — not only by the physical boundaries of different countries, but in those still more formidable moral impediments to the invader — the unity of language, laws, customs, and traditions ; the instinct of patriotism and freedom ; the hereditary rights of rulers ; and, though last not least, that homage to the restraints of justice which nations and public bodies* have in all ages avowed, however they may have found excuses for evading it.

So far, then, as we can understand the subject, the theory of a balance of power is a mere chimera — a creation of the politician’s brain — a phantasm, without definite form or tangible existence — a mere conjunction of syllables, forming words which convey sound without meaning. Yet these words have been echoed by the greatest orators and statesmen of England : they gingled successively from the lips of Bolingbroke, Chatham, Pitt, Burke, Fox, Sheridan, Grey, and Brougham ; — ay, even whilst we were in the act of stripping the maritime nations of the Continent of their colonies, then regarded as the sole source of commercial greatness ; whilst we stood sword in hand upon the neck of Spain, or planted our standard on the rock of Malta ; and even when England

* “Mankind, although reprobates in detail, are always moralists in the gross.” — *Montesquieu*.

usurped the dominion of the ocean, and attempted to extend the sphere of human despotism over another element, by insolently putting barriers upon that highway of nations—even then, the tongues of our orators resounded most loudly with the praises of the “balance of power!”* There would be something peculiarly humiliating in connection with this subject, in beholding the greatest minds of successive ages, instead of exercising the faculty of thought, become the mere automata of authority, and retail, with less examination than the haberdasher bestows upon the length, breadth, and quality of his wares, the sentiments bequeathed from former generations of writers and speakers—but that, unhappily, the annals of philosophy and of past religions, afford too many examples of the triumph of mere imitativeness over the higher faculties of the human intellect.

We must not, however, pass over the “balance of power,” without at least endeavouring to discover the meaning of a phrase which still enters into the preamble of an annual act of Parliament, for raising and maintaining a standing army of ninety thousand men.

* The phrase was actually adopted by Napoleon! who told O'Meara, at St. Helena, that he refused to permit the Emperor Alexander to occupy the Dardanelles, because, if Russia were in possession of Turkey, the “balance of power” in Europe would be destroyed! Lord Dudley Stuart sees much to admire in this regard for the balance of power, by one who had himself been in military occupation of all the principal states of Europe:—“But the profound views of that great man, Napoleon, told him not to accede to either the demands or entreaties of Alexander; and, on that occasion, though he had invaded the Turkish empire himself, he saved it by refusing the passage of the Dardanelles to Russia; nay, he saved Europe itself.”—*Lord Stuart's Speech, February 19.*

The theory, according to the historian Robertson, was first invented by the Machiavellian statesmen of Italy during the prosperous era of the Florentine (mis-called) republic ; and it was imported into Western Europe in the early part of the sixteenth century, and became "fashionable," to use the very word of the historian of Charles V., along with many other modes borrowed, about the same time, from that commercial and civilized people. This explanation of its origin does not meet with the concurrence of some other writers ; for it is singular, but still consistent with the ignis-fatuus character of the "balance of power," that scarcely two authors agree, either as to the nature or the precise period of invention of the system. Lord Brougham claims for the theory an origin as remote as the time of the Athenians ; and Hume describes Demosthenes to have been the first advocate of the "balancing system"—very recommendatory, remembering that ancient history is little else than a calendar of savage wars ! There can be little doubt, however, that the idea, by whomsoever or at whatever epoch conceived, sprang from that first instinct of our nature, fear, and originally meant at least some scheme for preventing the dangerous growth of the power of any particular state ; *that power being always regarded, be it well remembered, as solely the offspring of conquest and aggrandizement* : notwithstanding, as we have had occasion to show in a former page of this pamphlet, in the case of England and the United States, that labour, improvements, and discoveries, confer the greatest strength upon a people ; and that, by these alone, and not by the

sword of the conqueror, can nations, in modern and all future times, hope to rise to supreme power and grandeur. And it must be obvious that a system professing to observe a "balance of power"—by which, says Vattel, "no one potentate or state shall be able absolutely to predominate;" or, according to Gentz, "to injure the independence or essential rights of another;" by which, says Brougham, "a perpetual attention to foreign affairs is inculcated, and a constant watchfulness over every nation is prescribed:"—it must be obvious that such a "balancing system"—if it disregards those swiftest strides towards power which are making by nations excelling in mechanical and chemical science, industry, education, morality, and freedom—must be altogether chimerical.

Lord Bacon, indeed, took a broader and more comprehensive view of this question when he wrote, in his essay on empire—"First, for their neighbours, there can no general rule be given (the occasions are so variable) save one, which ever holdeth; which is, that princes do keep due sentinels, that none of their neighbours do overgrow so (by increase of territory, by *embracing of trade*, by approaches, or *the like*), as they become more able to annoy them than they were: and this is generally the work of standing councils, to see and *to hinder it*." This appears to us to be the only sound and correct view of such a principle as is generally understood by the phrase, "the balance of power." It involves, however, such a dereliction of justice, and utter absence of conscientiousness, that subsequent writers upon the subject have not dared to follow out the principle of hinder-

ing the growth of trade, and the like (which includes all advance in civilization); although, to treat it in any other manner than that in which it is handled by this "wisest, greatest, meanest of mankind," is to abandon the whole system to contempt, as unsound, insufficient, and illusory.* As for the *rule* of Lord Bacon; were the great Enemy of mankind himself to summon a council, to devise a law of nations which should convert this fair earth, with all its capacity for life, enjoyment, and goodness, into one vast theatre of death and misery, more dismal than his own dark Pandemonium, the very words of the philosopher would compose that law! It would reduce us even below the level of the brute animals. *They* do not make war against their own instincts; but this "rule" would, if acted upon universally, plunge us into a war of annihilation with that instinct of progression which is the distinguishing nature of intellectual man. It would forbid all increase in knowledge, which, by the great writer's own authority, is power. It would interdict the growth of morality and freedom, which are power.

* Lord Bacon's political maxims are full of moral turpitude. "Nobody can," says he, in speaking of kingdoms and estates, "be healthful without exercise—neither natural body nor politic; and certainly to a kingdom or estate, a just and honourable war is the true exercise." Accordingly, just wars are necessary; and, as there must be an opposite party to a just war, *ergo*, unjust wars are necessary! In speaking of kings, he calls them "mortal gods on earth." And, in his chapter on seditions and troubles, he gives many rules for governing and restraining, but not one for instructing the people. We speak of the moral sentiments of this great man, distinctly from his intellectual powers.

Were Lord Bacon's "rule" enforced, not only would the uninstructed Russians commence a crusade against our steam-engines and our skilful artisans; the still more barbarous Turk would be called upon to destroy the civilization and commerce of Petersburg; the savage African would be warranted, nay, compelled to reduce the turbaned Osmanli to his own nakedness and a wigwam; nor would the levelling strife cease until either the "rule" were abrogated, or mankind had been reduced to the only pristine possessions—teeth and nails!*

* There appears to be one honourable member of the British legislature, and only one, who is an advocate of this policy. Sir Harry Verney, in speaking after Mr. T. Attwood, upon the subject of Russia (see *Mirror of Parliament*, 1833, p. 2878), said—"The honourable gentleman has represented Russia as a state sunk in barbarism and ignorance, and hostile to every species of liberty. *I would to God that such a description of Russia were correct!!!* I believe the reverse to be the fact. I believe there is no power on earth which resorts to such effectual means of propagating her power, civilizing her country, promoting commerce, manufactures, the acquirement of useful information, and the propagation of every useful institution, as Russia. Does the honourable gentleman know that at this moment steam-boats navigate the Volga; and that you may travel in all parts of Russia in the same way as you may through the United States? Does the honourable gentleman know that the Emperor of Russia sends abroad agents in whom he can confide, to obtain information relative to improvements and inventions which may be useful to himself? * * * * I am quite sure that, if this country would maintain the balance of power, we must oppose the encroachments of Russia."

A Yankee punster would exclaim—"Sir Harry goes the whole hog with *Bacon* upon the 'balance of power!'"

Yes, Sir Harry is right. He and the noble author of the *Novum*

The balance of power, then, might, in the first place, be very well dismissed as *chimera*, because no state of things, such as the “disposition,” “constitution,” or “union,” of European powers, referred to as the basis of their system, by Vattel, Gentz, and Brougham, ever did exist;—and, secondly, the theory could, on other grounds, be discarded as *fallacious*, since it gives no definition—whether by breadth of territory, number of inhabitants, or extent of wealth—according to which, in balancing the respective powers, each state shall be estimated;—whilst, lastly, it would be altogether incomplete and inoperative, from neglecting, or refusing to provide against, the silent and peaceful aggrandizements which spring from improvement and labour. Upon these triple grounds, the question of the balance of power might be dismissed from further consideration. We shall, however, assume, merely for the sake of argument, that such an equilibrium existed in complete efficiency; and the first inquiry that suggests itself is—Upon what principle is Turkey made a member of this European system? The Turks, at

Organum, are the only two philosophers who have taken a true and consistent view of the question. We are far, however, from including them both under one rule of inculcation. The honourable member for Buckinghamshire errs, perhaps, intellectually, and not morally. His chief fault, or rather misfortune, is, that he lives in Buckingham. Let him and the Marquis of Chandos go through a course of Adam Smith and the economists, beginning with Harriet Martineau; and they will then be convinced that we cannot profit by the barbarism of another people, or be injured by their progress in civilization, *any more than the British nation can gain by the corn laws.*

least, will be admitted, by everybody, to form no party to this "*union*;" nor do they give that "perpetual attention to foreign affairs which it inculcates;" or that "constant watchfulness over every nation which it prescribes." They never read of the balance of power in the Koran; and they live in pious and orthodox ignorance of the authorities for this "fine and delicate" theory; for the names of Bacon, Vattel, and Brougham, are nowhere recorded by the prophet! Turkey cannot enter into the political system of Europe; for the Turks are not Europeans. During the nearly four centuries that that people have been encamped upon the finest soil of the Continent, so far from becoming one of the families of Christendom, they have not adopted one European custom. Their habits are still oriental, as when they first crossed the Bosphorus. They scrupulously exclude their females from the society of the other sex; they wear the Asiatic dress; sit cross-legged, or loll upon couches, using neither chair nor bed; they shave their heads, retaining their beards; and they use their fingers still, in the place of those civilized substitutes, knives and forks. Equally uninfluenced, after nearly four hundred years' contact with Europeans, is the Osmanli's condition by the discoveries and improvements of modern times. A printing press may be said to be unknown in Turkey; or, if one be found at Constantinople, it is in the hands of foreigners. The steam engine, gas, the mariner's compass, paper money, vaccination, canals, the spinning-jenny, and railroads, are mysteries not yet dreamed about by Ottoman philosophers. Lite-

rature and science are so far from finding disciples amongst the Turks, that that people have been renowned as *twice* the destroyers of learning: in the splendid though corrupt remains of Greek literature, at Constantinople; and by extinguishing the dawn of experimental philosophy, at the subversion of the Caliphate.

Down to within a few years of the present time, the Turks were viewed only as the scourge of Christian Europe. When, about a century and a half ago, Louis XIV. entered into an alliance with the Sublime Porte, the whole civilized world rung with indignation at the infamous and unnatural combination. And when, more than a century later, on the occasion of the capture of Ockzakow by the Russians, our most powerful minister (Pitt) proposed to forward succours to the aid of Turkey, such was the spirit of opposition manifested by the country, that the armaments already prepared by the government, under the sanction of a servile majority in the Parliament, were reluctantly countermanded. On that occasion, both Burke and Grey, although advocates of the balancing system, refused to acknowledge that the Turks formed parties to it. "He had never before heard it set forth,"* said the former, "that the Turkish empire was considered as a part of the balance of power in Europe. They had nothing to do with European power; they considered themselves as wholly Asiatic. Where was the Turkish resident at our court, the court of Prussia, or of Hol-

* Burke's Speech, House of Commons, March 29, 1791.—See *Hansard's Parliamentary History*, vol. xxix., pp. 76, 77.

land? They despised and contemned all Christian princes as infidels, and only wished to subdue and exterminate them and their people. What had these worse than savages to do with the powers of Europe, but to spread war, destruction, and pestilence amongst them? All that was holy in religion, all that was moral and humane, demanded an abhorrence of everything that tended to extend the power of that cruel and wasteful empire. Any Christian power was to be preferred to these destructive savages. He had heard, with horror, that the Emperor had been obliged to give up to this abominable power, those charming countries which border upon the Danube, to devastation and pestilence." And, at a subsequent debate upon the same question,* Mr. Grey (now Earl Grey), who has been a still more zealous champion of the balance of power (having once declared that every peasant in England was deeply interested in its preservation), said, "that England had pursued this object too far, would not be denied, when it was considered that, in her progress after it, she had travelled as far as the banks of the Black Sea."

And are the Turks of our own day less *cruel* or *savage*, that we should not only admit them within the pale of civilized nations, but impose on our people, for their defence, the burden of enormous armaments? We appeal to Dr. Walsh's late account of the atrocities perpetrated at Constantinople upon the unarmed Greeks, at the revolt of that people; we refer to the horrible massacre of the peaceful and civilized population of Scio! Is this empire less

* See *Hansard's Parliamentary History*, vol. xxix., p. 929.

wasteful now than when, forty-five years ago, Burke mourned over those fine provinces which were consigned to devastation and the crescent? We again recur to the description given to us by Walsh, and every other recent traveller, of the desolation that reigns throughout the Turkish dominions; we adduce those ruined cities, those deserted, though still fertile plains, and that population, wasting away in regions where ten times its numbers once found abundance; we point to the deplorable condition of agriculture, commerce, manufactures, and all the arts of life, in a country which comprised the ancient civilized world—to prove the waste of human life, happiness, wealth, and civilization, that is suffered every year at the hands of this Mahometan government. Has the pestilence ceased to ravage the Turkish territory? The quarantine now blockades, in a manner, from Christian Europe, Constantinople—standing upon the same latitude as Naples, Oporto, and New York, and chosen by Constantine as the most salubrious spot on earth—a city now the impure nurse and victim of the plague! Does Christianity or public virtue call upon us, in 1836, more than they did in 1791, to arm ourselves in behalf of Turkey? We point to the Koran and those orthodox vices which it inculcates—we refer to the slave trade and to polygamy, abominations which still flourish in that country, under the precept of the impostor of Mecca—to prove that neither religion nor morality can sanction the government of Great Britain in shedding a drop of the blood, or lavishing the treasure of Englishmen for the support of this “cruel,” “savage,”

“wasteful,” “devastating,” “pestilential,” and “infidel” nation, in a conflict with Russia or any other Christian people.

There remains one, and but one, other point from which to view the question of the balance of power; and we may then bid adieu to this monument of the credulity and facility of the human intellect for ever; or, at least, until we happen, perchance, to meet with it in the next year’s mutiny bill, supplying the “*whereas*” of an act of parliament, with a pretence for maintaining a standing army of upwards of 90,000 men!

Russia, in possession of Constantinople, say the alarmists, would possess a port open at all seasons; the materials for constructing ships; vast tracts of fertile land, capable of producing cotton, silk, wool, &c.; and she would be placed in a situation of easy access to our shores—all of which would tend to destroy the balance of power, and put in danger the interests of the British commerce, in particular. But New York, a port far more commodious than Constantinople, is open at all seasons; the United States possess materials without end for ship-building; their boundless territory of fertile land is adapted for the growth of cotton, silk, wool, &c.; and New York is next door to Liverpool; for—thanks to Providence!—there is no land intervening between the American continent and the shores of this United Kingdom. Yet, we have never heard that the North American continent forms any part of the balance of power! Twenty-four sovereign, free, and independent states, altogether forgotten in a “balancing system, which

dictates an increasing care even of nations most remotely situated, and apparently unconnected with ourselves !” We doubt the equilibrium can hardly be maintained. This is not all. There is the entire southern continent, from the Isthmus of Panama to the point of Cape Horn, likewise entirely omitted. Mercy on us, one scale will certainly kick the beam ! Twelve separate empires of South America, bounded on one extremity by Mexico, and on the other by Patagonia ; and the vast expanse of territory, settled and unsettled, under the dominion of the Government of Washington, and, altogether, comprising one-third of the habitable globe—have been quite forgotten in a balance of power !

Not having been supplied by the authors of the theory with any rule by which to judge of their mode of estimating or weighing the powers of the respective parties to the balancing system ; and being equally uninformed as to the qualifications required from those states which aspired to the union, it would be presumptuous to guess upon what principle Turkey is admitted to a connection with England, from which Brazil is excluded ; or why, in forming a balance of the civilized powers, the United States are rejected, in order to give room to admit Russia into one of the scales. It cannot be from proximity that Turkey is preferred to the Brazils. A voyage from Rio Janeiro to Liverpool will average about forty days ; whilst the time taken in going from England to Constantinople usually reaches double that period. Nor can it arise from a comparison of our commerce with the two countries, which is four times as valuable with

the American as the European state. Then a wise and provident regard to the future cannot be the guiding motive, since the prospect is altogether in favour of the transatlantic empire, which embraces within its bounds a territory equalling in extent the whole of Russia in Europe, and forming the finest, and destined in all probability to be, both as respects vegetable and mineral riches, the most productive amongst all the countries in the world. Religion, language, national character, and the plague, all oppose the claim of the Turk to this preference over the Christian rival; and we can only suspend our conjectures, and entreat that some advocate of the “balancing system” will inform the world upon what *principle*, commercial, social, or political—in short, upon what ground, consistent with common sense—does the foreign secretary involve Great Britain in the barbarian politics of the Ottoman Government, to the manifest risk of future wars, and the present pecuniary sacrifice attending standing armaments; whilst, with another state, with which we are more deeply interested as traders, more identified as men, and from which we are, navally speaking, less distant, no political intercourse is found necessary? The same argument applies, with more or less force, to the other eleven South American States, with each of which our commerce averages probably more in amount than with Turkey; yet, although they are Christian communities, all but universally at peace,*

* We add an extract from a letter, dated January 26, 1836, addressed to the author by a friend—a gallant officer, and an enlightened and amiable man, who, himself, holds an official rank

and notwithstanding the future influence which they are inevitably destined to exercise over the interests of the entire world—these countries have not been thought worthy of admission into that system of civilized nations which is now agitated from one extremity to the other with the fate of Mahometan Turkey ! However impossible it may be to speculate successfully upon the intended operation of a system which, in reality, never existed except in the precincts of the politician's brain, still it must be remembered that, at the time the theory was first invented, it proposed to give to the European powers owning American colonies, a weight proportioned to the extent of those possessions ; and the question then arises—which we shall merely propound, and leave

at the British Court from one of the States of South America. —“ You, who are so strong an advocate for peace and freedom will be glad to hear of the tranquillity of America, and that our systems of government are at last working well. Of the thirteen transatlantic republics, ten are now in a perfect state of order and prosperity. The capture of Puerto Cabello from a banditti who are in possession of it, will restore that of Venesuela ; and the next news from Peru will give us that of the peaceable settlement of its government. Mexico, therefore, will alone remain an exception to this peaceful state ; and I am afraid she will long remain so : yet, in spite of the troubles of Mexico, she last year raised from her mines (according to the official report of the minister of finance, and without including what was smuggled) thirty millions of dollars, in gold and silver, being three millions more than was ever produced under the most flourishing year of the old Spanish government. As to the national debts of America, the bonds of the United States were used to be sold by basketfuls, in the first years of their independence, yet they have now paid off the whole.—You have about fourteen principal nations in Europe, and you know two or three of them have internal dissensions.”

in despair, for the solution of such of our readers as may wish to pursue this chimerical inquiry still farther—By what ingenious process was the balance of power preserved, when England, Spain, and Portugal were deprived of their transatlantic territories? Canning, indeed, once talked of “calling into existence a new world, to adjust the balance of the old;” but, as in many other oratorical flourishes of our state-rhetorician, he meant quite a different practical object: in other and more homely language, that statesman proposed to acknowledge the independence of South America—ten years after every private individual of judgment had predicted the freedom of that Continent. To this day those states which once formed so important a part of the balancing system, as appendages to the mother countries, are wanting in the scales of Europe; and by what arts, *whether by false weights or the legerdemain of the nation still holding the balance*, the equilibrium can be preserved without them, constituting as they do nearly one-third of the terrestrial globe, is a mystery beyond the reach of our powers of divination.

We glanced at the comparative claims of Russia and the United States, to be included in this imaginary States-union: a very few words, upon this point, are all that we shall add to our probably already too extended notice of the “balance of power.”

Upon whatever principle the theory under consideration may have been at first devised—whether, according to Gentz, for the purpose of uniting neighbouring states, or, as Brougham asserts, with a view

to the union of all the European powers—it is certain that it would have been held fatal to the success of the balancing system for any one power, and that one amongst the most civilized, wealthy, and commercial, to have refused to subscribe to its constitution. Yet the United States, (for the number of its inhabitants,) the richest, the most commercial, and, for either attack or defence, the most powerful of modern empires; a country which possesses a wider surface of fertile land than Russia could boast even with the accession of Turkey; and, instead of being imprisoned, like Russia, by the Dardanelles and the Sound, owning five thousand miles of coast, washed by two oceans, and open to the whole world:—*the United States are not parties to the balance of power!* Ignorant as we are of the rule of admission to and exclusion from this balancing system, it would be vain to conjecture why Russia should be entitled, not only to be a member of this union, but to engross its exclusive attention, whilst North America is unknown or not recognised as of any weight in the balance of power. It cannot be, on our part, from closer neighbourhood; for Russia, even at Constantinople, would—commercially and navally speaking—be three times as distant* as New York, from Great Britain. Nor on account of the greater amount of the European commerce transacted by Russia. The commerce of the United States with the countries of Europe, is nearly as great in amount as that of the British empire with the Continent; twice as large as the trade of France

* The average time of the passage from New York to Liverpool, by the line of packet ships, is twenty-five days.

with the same quarters; and three times that of Russia. It cannot be because of the more important nature of the trade which we carry on with Russia as compared with that with America; since the cotton of the latter gives employment and subsistence to more than a million of our people, and is actually indispensable to our commercial and political existence. Here are cogent reasons why the transatlantic power should form a party to the union of state -- why, at least, it should, in place of an empire situated upon the Baltic or Black Sea, be united in political bands with Great Britain. And wherefore is this rich, commercial, and this contiguous country -- with a population more entirely enlightened than any besides, and whose improvements and institutions, England and all Europe are eager to emulate -- an alien to the "balancing system," of which Turkey, Spain, and Persia, are members? It would be difficult to find any other satisfactory answer than that which we are able to give as the reason of this exclusion: -- *America, with infinite wisdom, refuses to be a party to the "balance of power."*

Washington (who could remember when the national debt of England was under fifty-five millions; who saw it augmented, by the Austrian war of succession, to seventy-eight millions; and again increased, by the seven years' war, to one hundred and forty-six millions; and who lived to behold the first fruits of the French revolutionary wars, with probably a presentiment of the harvest of debt and oppression that was to follow -- whose paternal eye looked abroad only with the patriotic hope of finding,

in the conduct of other nations, example or warning for the instruction of his countrymen) seeing the chimerical objects for which England, *although an island*, plunged into the contentions of the Continent, with no other result to her suffering people but an enduring and increasing debt—bequeathed, as a legacy to his fellow-citizens, the injunction, that they should never be tempted, by any inducements or provocations, to become parties to the States' system of Europe. And faithfully, zealously, and happily has that testament been obeyed! Down even to our day, the feeling and conviction of the people, and consequently of the Government and the authors* of

* Washington Irving has good humouredly satirized this national propensity for foreign politics, in the well-known sketch of "John Bull." "He is," says that exquisite writer, "a busy-minded personage, who thinks, not merely for himself and family, but for all the country round, and is most generously disposed to be everybody's champion. He is continually volunteering his services to settle his neighbour's affairs, and takes it in great dudgeon if they engage in any matter of consequence without asking his advice; though he seldom engages in any friendly office of the kind without finishing by getting into a squabble with all parties, and then railing bitterly at their ingratitude. He unluckily took lessons in his youth in the noble science of defence; and having accomplished himself in the use of his limbs and weapons, [i. e. *standing armies and navies*,] and become a perfect master at boxing and cudgel play, he has had a troublesome life of it ever since. He cannot hear of a quarrel between the most distant of his neighbours, but he begins incontinently to fumble with the head of his cudgel, and consider whether interest or honour does not require that he should meddle in their broils. Indeed he has extended his relations of pride and policy so completely over the whole country, [i. e. *quadrupartite treaties and quintuple alliances*,] that no event can take place without in-

the United States, have constantly increased in favour of a policy from which so much wealth, prosperity, and moral greatness have sprung. America, for fifty years at peace, with the exception of two years of defensive war, is a spectacle of the beneficent effects of that policy which may be comprised in the maxim—As little intercourse as possible be-

fringing some of his finely-spun rights and dignities. Couched in his little domain, with those filaments stretching forth in every direction, he is like some choleric, bottle-bellied old spider, who has woven his web over a whole chamber, so that a fly cannot buzz, nor a breeze blow, without startling his repose and causing him to sally forth wrathfully from his den. Though really a good-tempered, good-hearted old fellow at bottom, yet he is singularly fond of being in the midst of contention. It is one of his peculiarities, however, that he only relishes the beginning of an affray; he always goes into a fight with alacrity, but comes out of it grumbling even when victorious; and, though no one fights with more obstinacy to carry a contested point, yet, when the battle is over, and he comes to a reconciliation, he is so much taken up with the mere shaking of hands, [*Lord Castlereagh at the treaty of Vienna,*] that he is apt to let his antagonists pocket all they have been grumbling about. It is not, therefore, fighting that he ought to be so much on his guard against as making friends. . . . All that I wish is, that John's present troubles may teach him more prudence in future; [*nothing of the kind: look at him now, fifteen years after this was written, playing the fool again, ten times worse than ever, in Spain;*] that he may cease to distress his mind about other people's affairs; that he may give up the fruitless attempt to promote the good of his neighbours, and the peace and happiness of the world, by dint of the cudgel; that he may remain quietly at home; gradually get his house into repair; cultivate his rich estate according to his fancy; husband his income—if he thinks proper; bring his unruly children into order—if he can."—*Sketch Book*.

twixt the *Governments*, as much connection as possible between the *nations*, of the world. And when England (*without being a republic*) shall be governed upon the same principles of regard for the interests of the people, and a like common sense view of the advantages of its position, we shall adopt a similar motto for our policy; and then we shall hear no more mention of that costly chimera, the balance of power.

CHAPTER IV.

PROTECTION OF COMMERCE.

CONTENTS.—Protection of our Commerce no just Pretext for maintaining enormous Armaments.—Our Manufactures the true Source of our Commercial Greatness.—Curious Illustration of the Uselessness of Military and Naval Power, for the Protection of our Commerce against the Rivalry of better and cheaper Articles than ours.—Mutual Dependence of Britain and the United States on each other.—Prodigious Traffic between these two Countries.—Instance of our being driven out of our own fortified Market of Gibraltar, by the Competition of an unarmed Rival.—Former Monopoly of the Sea possessed by Britain.—Its Consequences, the National Debt, and the Instigation of other Nations to commence Manufacturing.—The American and French Manufactures avowedly called into competition with ours, by recollections of British tyranny at Sea.—Progress of the American Cotton Manufacture.—Absurdity of all Apprehensions of Foreign Invasion.—Cost of the Armaments for the Protection of our Commerce—in the Mediterranean—on the West India Station.—Causes and Consequences of British Wars.—No Class of Society really benefited by War.—Non-Intervention in Foreign Wars the true Policy of Britain.—Superiority of the Influence of British Example, while cultivating the Arts of Peace, to British Violence or Intimidation.—A Word at parting to the Reader.

WE began the preceding remarks upon a question which, however universally recognised in former times, has now almost fallen into neglect, by quoting a passage from the last speech of King William III. to his Parliament; and—before proceeding to discuss that other,

but still more popular, pretence for wars and standing armaments, *the protection of our commerce*—we shall give an extract or two from the latest (though we sincerely hope not the last) address of William IV. to his Reformed Parliament, delivered on the 4th February 1836 :—

“I continue to receive from my allies, and, generally, from all foreign powers, assurances of their unaltered desire to cultivate with me those friendly relations which it is equally my wish to maintain with them; and the intimate union which happily subsists between this country and France, is a pledge to Europe for the continuation of general peace.”

After the above passage, which contains, one would suppose, ample guarantees against war—since it not only conveys assurances of the peaceful disposition of *all* foreign powers towards this country, but adds, by way of making those assurances doubly sure, that the union which happily subsists between England and France is a pledge for the *continuance* of a general peace—comes the following :—

“The necessity of maintaining the maritime strength of the country, and of giving adequate protection to the extended commerce of my subjects, has occasioned some increase in the estimates for the naval branch of the public service.”

Now, if we felt some difficulty in apprehending the question of the “balancing principle,” we confess ourselves to be much more at a loss to understand what is here meant by the protection of commerce through an increase in the navy estimates. Our commerce is, in other words, our manufactures; and the first inquiry

which occurs necessarily is, Do we need an augmentation of the naval force, in order to guard our ingenious artisans and industrious labourers, or to protect those precious results of their mechanical genius, the manufactories of our capitalists? This apprehension vanishes, if we refer to the assurances held out, in the above double guarantee for the continuance of peace, that our shores are safe from foreign aggression. The next idea that suggests itself is, Does piracy increase the demand for vessels of war? We, who write in the centre of the largest export trade in the world, have not heard of even one complaint of violence done to British interests upon the ocean; and probably there are not to be found a dozen freebooters upon the face of the aquatic globe. South America demands no addition to the force upon its coasts at the present moment, when those several Governments are more firmly organized, and foreign interests consequently more secure, than at any previous period. China presents no excuse; for her policy is, fortunately for her territorial integrity, invulnerable to foreign attempts at "intervention." The rest of Asia is our own. Where, then, shall we seek for a solution of the difficulty, or how account for the necessity which called for the increase of our naval strength?

The commerce of this country, we repeat, is, in other words, its manufactures. Our exports do not consist, as in Mexico or Brazil, of the produce of our soil and our mines; or, as in France and the United States, of a mixture of articles of agricultural and manufacturing origin: but they may be said to be wholly produced by the skill and industry of the

manufacturing population of the United Kingdom.* Upon the prosperity, then, of this interest, hangs our foreign commerce; on which depends our external rank as a maritime state; our customs-duties, which are necessary to the payment of the national debt; and the supply of every foreign article of our domestic consumption—every pound of tea, sugar, coffee, or rice, and all the other commodities consumed by the entire population of these realms. In a word, our national existence is involved in the well-doing of our manufacturers. If our readers—many of whom will be of the agricultural class, but every one of them nevertheless equally interested in the question—should ask, as all intelligent and reasoning minds ought to do, To what are we indebted for this commerce?—we answer, in the name of every manufacturer and merchant of the kingdom—The *cheapness* alone of our manufactures. Are we asked, How is this trade protected, and by what means can it be enlarged? The reply still is, By the *cheapness* of our manufactures. Is it inquired how this mighty industry, upon which depends the comfort and existence of the whole empire, can be torn from us?—we rejoin, Only by the *greater cheapness* of the manufactures of another country. These truths are, we presume, well known to the Government of Great Britain; at least, one member of the present cabinet is vigilantly alive to their momentous character, as we are going to shew, by referring to a fact coming within our personal

* We stated this familiar fact in a former pamphlet; but it is one that cannot be too frequently placed broadly before the public eye.

experience, and which bears pointedly upon the question in hand.

The Directors of the Chamber of Commerce of Manchester (of which board the author has the honour of being a member) were favoured, a short time since, with a communication from the Right Hon. C. P. Thomson, accompanied by an assortment of samples of various fabrics, which, in the diligent fulfilment of his official duties, he had caused to be procured from the several manufacturing districts of the Continent; and requesting a report as to the comparative relation which, after due examination, they might be found to bear towards the manufactures of England. Among these, were patterns of Swiss Turkey-red chintz prints, and of mixed cotton and linen Saxony drills—both of which commodities have been, for some time, sold in those quarters—superior, both in cheapness and quality, to similar articles produced in this country; and, consequently, in reporting to the Board of Trade, the Directors of the Chamber of Commerce had the disagreeable duty of stating that, in those particular products of the loom and printing machine, we were beaten by our foreign rivals, and superseded in third or neutral markets. The causes of the advantages thus possessed over us by our competitors on the Continent, and which were pointed out to the attention of the Right Hon. President, are the heavy imposts still fettering our manufacturing energies, and the greater cost of the food of our workmen: the remedy is, obviously, a reduction of the duties on corn, oil, soap, &c. But, if, instead of naming such causes and remedies as these, the Manchester Chamber

of Commerce had stated, in its report, that the prints of Switzerland and the drills of Saxony (*the governments of which two countries do not together own a ship of war, as we believe*) were cheaper than the like articles fabricated here, *because the British navy was not sufficiently strong*, and had advised, for relief, that half a million a-year should be added to the navy estimates—would not a writ *de lunatico inquirendo* have justly been issued against those intelligent Directors, the writer's colleagues, without further evidence of their insanity! Yet, having seen that the only way in which we can protect our commerce is the cheapness of our manufactures, what other object can be meant, when the Government calls for an augmentation of the navy, with a view to the protection of our commerce, but some plan, however inappreciable to common minds, for reducing the expenditure of the country, and thereby relieving us from some of the burdensome imposts with which our race of competition is impeded?

But there is, in the second passage which we have just quoted from his Majesty's speech, a part which tends to throw more light upon the whole—where it refers to the necessity of giving adequate protection to the "*extended*" commerce of the country. By which we are to infer, that it is the principle of the government, that the extension of our trade with foreign countries, demands for its protection, a corresponding augmentation of the royal navy. This, we are aware, was the policy of the last century, during the greater part of which, the motto, "Ships,

Colonies, and Commerce,"* was borne upon the national escutcheon, became the watchword of statesmen, and was the favourite sentiment of public writers; but this, which meant, in other words—"Men of war to conquer colonies, to yield us a monopoly of their trade," must now be dismissed, like many other equally glittering but false adages of our forefathers, and in its place we must substitute the more homely but enduring maxim—*Cheapness*, which will command commerce; and whatever else is needful will follow in its train.

At a time when all beyond the precincts of Europe was colonial territory, and when the trade of the world was, with the exception of China, almost wholly forced into false channels, by the hand of violence, which was no sooner withdrawn than, by its own inherent law—the law of nature—it again sought its proper level course, the increase of the navy necessarily preceded and accompanied an extension of our commerce. The policy of nations, *then*, if judged by the standard which we apply to the conduct of individuals *now*—and there can be no exculpation in multitudinous immorality—was, to way-lay their customers, whom they first knocked down and disabled, and afterwards dragged into their stores and compelled to purchase whatever articles they chose to offer, at such prices as they chose to ask! The independence of the New World has for ever put an end to the colonial policy of the Old, and, with it, that system

* This is still a favourite toast at the annual meetings of the Pitt clubs, drunk by those consistent politicians who will not yield even to the inexorable reforms of trade.

of fraud and violence which, for centuries, characterised the commercial intercourse of the two hemispheres. And in that portentous truth, *the Americas are free*, teeming as it does with future change, there is nothing that more nearly affects our destiny than the total revolution which it dictates to the statesmen of Great Britain, in the commercial, colonial,* and foreign policy of our Government. America is once more the theatre upon which nations are contending for mastery: it is not, however, a struggle for conquest, in which the victor will acquire territorial dominion—the fight is for commercial supremacy, and the battle will be won by the cheapest!

Whilst our trade rested upon our foreign dependencies, as was the case in the middle of the last century—whilst, in other words, force and violence were necessary to command customers for our manufactures—it was natural and consistent that almost every king's speech should allude to the importance of protecting the commerce of the country, by means

* We shall not enter upon the subject of the profit and loss of our colonies, which would require a volume. An acute writer of the day estimates the annual loss by our dependencies at something like four millions; but he loses sight altogether of the interest of the money spent in conquering them, which is twenty or thirty millions a-year more! Leaving these unprofitable speculations as to the past, let us beg our readers to look at a chart of the world, and, after comparing the continent of free America with the specks of islands forming our colonial possessions, to ask himself whether, in choosing our *future* commercial course, the statesman who presides at the helm of affairs ought to take that policy for his guide which shall conduct us to the market of the entire hemisphere, or that which prefers the minute fraction of it.

of a powerful navy; but whilst, under the present more honest principles of trade, *cheapness* alone is necessary to command free and independent purchasers, and to protect our commerce, it must be evident that such armaments as impose the smallest possible tax upon the cost of our commodities must be the best adapted for the protection of our trade. But, besides dictating the disuse of warlike establishments, free trade (for of that beneficent doctrine we are speaking) arms its votaries by its own pacific nature, in that eternal truth—*the more any nation trafficks abroad upon free and honest principles, the less it will be in danger of wars.*

If, by way of example, we refer to the present commercial intercourse between the United States and this empire, how completely does it illustrate the force of the above maxim! At no period of history were two people, aliens to each other by birth, government, laws, and institutions, united indissolubly by one common interest and mutual dependence, like these distant nations. One-third* of our whole exports consists of cotton manufactures, the raw material of which is produced from the soil of the United States. More than a million of our population depend upon the due supply of this cotton wool, for the labour of every succeeding day, and for the regular payment of their weekly wages. We sometimes hear objections against the free importation of corn, made on the ground that we should become dependent upon foreigners for

* About one-half of our exports is of cotton origin; but we take one-third as the portion worked up from North American material.

bread; but here we have a million of people, whose power of purchasing not only bread, but meat, ay, or even potatoes, as well as clothing, is supplied from the annual growth of lands possessed by an independent nation, more than three thousand miles off. The equilibrium* of this stupendous industry is preserved by the punctual arrival, from the United States, of a quantity of raw cotton, averaging 15,000† bales weekly, or more than 2000 bales a-day; and it depends also upon the equally constant weekly departure of more than a quarter of a million sterling worth of cotton goods, exported to foreign parts. Now, what precaution is taken by the Government of this country to guard and regulate this precious flood of traffic? How many of those costly vessels of war, which are maintained at an expense to the nation of many millions of pounds annually, do our readers suppose, are stationed at the mouths of the Mersey and Clyde, to welcome and convoy into Liverpool and Glasgow, the merchant ships from New York, Charleston, or New Orleans, all bearing the inestimable freight of cotton wool, upon which our commercial and social existence depends? Not one! What portion of our standing army, costing seven millions a-year, is occupied in defending this more than Pactolus — this

* We wish those rhetorical statesmen, who talk so eloquently in favour of going to war to preserve the equilibrium of Europe, or the balance of power in Turkey, would condescend to give a thought as to its effects upon the equilibrium of our cotton manufacture.

† We confine our illustrative remarks on that part which we assume to be the growth of the United States; the total of our imports and exports of cotton is, of course, more than stated here.

golden stream of trade, on which floats not only the wealth, but the hopes and existence of a great community? Four invalids, at the Perch Rock battery, hold the sinecure office of defending the port of Liverpool! But our exports to the United States will reach, this year, perhaps, in real or declared value, more than ten millions sterling, and nearly one half of this amount goes to New York:—what portion of the royal navy is stationed off that port, to protect our merchants' ships and cargoes? The appearance of a king's ship at New York is an occurrence of such rarity as to attract the especial notice of the public journals; whilst, along the entire Atlantic coast of the United States—extending, as it does, more than 3000 miles, to which we send a quarter of our whole yearly exports—there are stationed two* British ships of war only, and these two have also their station at the West Indies. No! this commerce, unparalleled in magnitude, between two remote nations, demands no armament as its guide or safeguard: nature itself is both. And will one rational mind recognise the possibility of these two communities putting a sudden stop to such a friendly traffic, and, contrary to every motive of self-interest, encountering each other as enemies? Such a rupture would be more calamitous to England than the sudden drying up of the river Thames; and more intolerable to America than the cessation of sunshine and rain over the entire surface of one of her maritime states!

* See the *United Service Journal* for June 1836, for a list of the ships of war and their stations, June 1st:—North America and West India stations, one 74 and one 52 guns.

And if such is the character of free trade, (or, in other words, all trade between independent nations,) that it unites, by the strongest motives of which our nature is susceptible, two remote communities, rendering the interest of the one the only true policy of the other, and making each equally anxious for the prosperity and happiness of both; and if, moreover, every addition to the amount of traffic between two independent states, forges fresh fetters, which rivet more securely these amicable bonds—how can the extension of our commerce call for an increase in our armaments, or how can a government stand excused from the accusation of imposture, unless by the plea of ignorance, when it calls for an augmentation of the navy estimates under the pretence of protecting our extended commerce?

But, to put this matter in another point of view, let us suppose that this mighty traffic between England and the United States, which is wholly governed by the talismanic law of “cheapness,” were suddenly interrupted, in the only way in which it can be disturbed—by some other people producing cheaper hardware, woollens, pottery, &c, to whom the Americans, guided solely by that self-interest which controls alike the commerce of every nation, could sell their cotton for a greater amount of those manufactures in return—could our royal navy, were it even augmented to tenfold its present monstrous force, protect us from the loss of our commerce? To answer this question, we need only appeal to the experience of facts, to be found at this time operating in another quarter.

At the moment when we write, the British naval

force stationed in the Mediterranean amounts to thirty-six vessels of war,* mounting altogether, 1320 guns, being rather more than a third of the death-dealing metal afloat in our king's ships. Our entire trade to all the nations bordering on this sea, and including the whole of that with Spain and France, amounts to very nearly the same as our exports to the United States—in value or importance, however, it is not equal to the latter. Now, leaving for the present the question of the profitableness of carrying on a traffic with such heavy protecting expenses annexed, let us proceed to ascertain whether or not this prodigious and costly navy affords an *efficient* protection to our commerce in those quarters. The reader will bear in mind our statement, that the Chamber of Commerce of Manchester had the unpleasant task of reporting to the Board of Trade, that the drill manufacturers of Saxony and the calico printers of Switzerland had superseded goods of the same descriptions, made in England, in third or neutral markets:—*those markets were in the Mediterranean!* This is not all. One of those markets, from which our manufactures were reported to have been expelled, by a decree of far more potency than was penned by the hand of violence at Berlin and Milan, and prohibited by an interdict ten times more powerful than ever sprang from the Prussian league—the interdict of *dearness*: one of those markets was *Gibraltar!!* (We promised, a few pages back, to prove that the industrious middling and working classes of this empire, have no

* See the *United Service Journal*, June 1, 1836, for a list of the stations of the British navy.

interest in the violent and unjust seizure and retention of an integral portion of the Spanish territory; and we have, in this simple fact, redeemed our pledge.) We give it to the reflecting portion of our readers, as a truth authenticated by the very best authority, and worthy of deep attention from the economist, the statesman, and the advocate of peace and of a moral ascendancy over physical force—that the artisans of Switzerland and Saxony have achieved a victory over the manufacturers of England, upon her own fortress—the free port of Gibraltar! We kiss the rod—we dote upon this fact, which teaches, through us, a lesson to mankind, of the inefficacy of brute violence in the trading concerns of the world. Let us pause, then, to recapitulate our facts. On the one hand, behold a commerce with America, amounting to the quarter of the whole trade of the kingdom—upon which depends, from week to week, the subsistence of a million of people, and whereon rests our very existence as a commercial empire—conducted regularly, day by day, without the aid or intervention of ships of war, to guide or coerce it; on the other, an armament, avowedly to protect our commerce, of 1320 cannon, unable to guard our manufactures against the successful cheapness of the poorest, the weakest, and humblest community of the Continent—a community destitute of fleets, and without a standing army. The inference is plain—we have succeeded in establishing our premises; for, having proved that the (physically speaking) impregnable fortress of Gibraltar, with its triple lines of batteries, aided by thirty-six vessels of war, and altogether combining a

greater quantity of artillery than was put in requisition to gain the victory of Waterloo, Trafalgar, or the Nile, surrenders our commerce into the hands of the Swiss and Saxons, unable to protect us against the cheaper commodities of those countries—we need not go further to shew, since these two countries without navies are our witnesses of the facts, that armed fleets, armies, and fortresses are not essential to the extension of commerce, and that they do not possess the power of protecting it against the *cheapness* of rivals. These may appear trite and familiar truths to our intelligent readers; our justification may be found, if needed, in the fact, that the Government has demanded and obtained an addition to our navy estimates, this session of Parliament, amounting to nearly half a million sterling per annum, under the pretence of *protecting* our commerce; and we do not recollect that one of our representatives rose from his seat to tell the minister, as we now tell him, that *his* is that kind of *protection* which the eagle affords to the lamb—*covering it to devour it*.

It will be seen that all which has been stated bears indirectly, but conclusively, upon the question of Russia and Turkey, and affords an unanswerable argument against going to war to defend our commerce by means of naval armaments; since it is plain, from the example of Gibraltar, that, even were Constantinople in our own power, its commerce could be retained only by our selling cheaper than other nations; whilst, supposing it to be in the possession of Russia or any other people, the cheapness of our commodities will eventually command that market,

in the same manner as the cheap drills and prints of Saxony and Switzerland supplant our goods, in spite of the batteries and fleets which defend our Spanish fortress.

Having thus shewn that cheapness, and not the cannon or the sword, is the weapon through which alone we possess and can hope to defend or extend our commerce—having proved, also, that an increase of trade, so far from demanding an augmentation of warlike armaments, furnishes an increased safeguard against the chances of war—is it not clear that, to diminish the taxes and duties which tend to enhance the cost of our manufactures, by a reduction of our navy* and army, is the obvious policy of a ministry which understands and desires to promote the true interests of this commercial nation? Were our army and navy reduced to one half of their present forces, and the amount saved applied to the abolition of the duties upon cotton, wool, glass, paper, oil, soap, drugs, and the thousand other ingredients of our manufactures, such a step would do more towards protecting and extending the commerce of Great Britain, than an augmentation of the naval armaments to fifty times their present strength, even supposing such an increase could be effected with no addition to the national burdens.

* The public papers have announced that, owing to the demand for sailors for the royal navy, the merchants have been compelled to advance the wages of their hands. We have read the following notice upon the quay at Liverpool—“ *Wanted, for his Majesty's navy, a number of petty officers and able-bodied seamen.*” It would seem that there is no want of *commissioned* officers; which accounts for the increase of the navy estimates, we suspect.

Experience has shewn that an overwhelming power at sea, whilst it cannot dictate a favourable commercial treaty with the smallest independent state, (for such a spectacle of violence was never seen, as a victorious admiral, sword in hand, prescribing the terms of a tariff to his prostrate foe,) has had the effect of rousing national fear, hatred, and envy, in the breasts of foreigners; and these vile feelings of human nature, awakened and cultivated by our own appeal to the mere instinct of brutal force, have been naturally directed, in every possible way, to thwart and injure our trade. During the latter half of the French revolutionary wars, England, owing to successive victories, became the mistress of the ocean; her flag floated triumphantly over every navigable parallel of latitude, and her merchants and manufacturers commanded a monopoly of the markets of the globe. For a period of more than ten years, an enemy's ship was scarcely to be seen, unless as a fugitive from the thunder of our vessels of war; no neutrals were allowed to pass along that thoroughfare of nations, the ocean, without submitting to pay the homage to British power, of undergoing the humiliation of a search by our cruisers. There was something inconceivably flattering to the vulgar mind in this exhibition of successful violence. Our naval supremacy, consequently, became the theme and watchword of all those orators, statesmen, and writers, who had an interest in perpetuating the war. Poets, too, were put in requisition; and a thousand songs, all breathing such sentiments as "Rule Britannia," were heard in the theatres, taverns, and streets. Cupidity, as

well as pride, was appealed to. Our merchants were continually reminded, by the minister and his minions, that they alone possessed the markets of the world; *and, even whilst our yearly national expenditure reached nearly double the amount of the whole of our exports,* such was the intoxication, such the infatuation of the moment, owing to the gross appeals made to national vanity, that the multitude were not only impressed with the belief that our commerce was profitable, but convinced that England was destined to remain permanently the same trading monopolist. Peace cured us of this maddening fever; but, in exchange, it brought the lumbago of debt, which still oppresses and torments our body politic. Not only this: the moral is yet to follow. The brute force which we had exercised towards foreign nations, at sea, during the war, had naturally excited the animal feelings of hatred, fear, and revenge, in return. Every country began to establish manufactures, in order to become independent of and secure against Great Britain. Russia, Austria, and France now commenced the war of interdicts; and Ferdinand of Spain* had

* Our former intervention in the concerns of Spain, was characterised by wisdom itself, when compared with the unadulterated folly of the part we are at present taking in Peninsular affairs. Here is a family quarrel, between two equally worthless personages, who dispute the right of reigning over ten millions of free people; and England sends a brigade of *four or five thousand men, (by what right?)* to decide this purely domestic question! We have been informed, by a friend long resident in Spain, upon whose authority we can rely, that there is not an honest public functionary in the country; that, from the Minister, down to the lowest tidewaiter, all are as corrupt now as when Wellington
ured the treachery of this people. Villiers and Evans are

no sooner succeeded in re-establishing the inquisition, than he—for whom, to the everlasting infamy of that epoch of our history, the blood and treasure of England were squandered—repaid us with a prohibition of our cottons.

We cannot give proofs of the motives which actuate the councils of despotic princes, for they furnish none to the world; but the discussions on the tariff laws, in France and the United States, which were necessarily public, fully disclosed that the reason which led their governments to seek to become themselves manufacturers, was to render those countries independent of the power of Great Britain at sea. The French nation—which, in 1786, had concluded a treaty of commerce with Great Britain, upon terms very favourable to the latter, and which would, had

experiencing that treatment, at the hands of Isturiez and Cordova, which Frere and Sir John Moore encountered, thirty years ago, from the agents of the government. That the *people* are not improved by our last sacrifices for the dynasty of Ferdinand, may be proved by their atrocities and female massacres—unheard of out of Turkey. When the affairs of the British empire are conducted with as much wisdom as goes to the successful management of a private business, the honest interests of our own people will become the study of the British ministry; and then, and not till then, instead of being at the mercy of a chaos of *expedients*, our foreign Secretary will be guided by the *principle* of non-intervention in the politics of other nations. “A people,” says Channing, “which wants a saviour, which does not possess an earnest and pledge of freedom in its own heart, is not yet ready to be free.” In the meantime, it cannot be too widely known, that our interference in the private quarrels of these semi-barbarians, will cost us this year, half a million sterling; whilst with difficulty we have obtained £10,000 for establishing Normal Schools.

it not been interrupted by war, have consolidated the two countries, by a complete identification of interests, long before the period we are now speaking of—proceeded, immediately on the close of hostilities, to prohibit the introduction of every article of our manufacture. The spirit which operated then is still alive, and with the avowal of the self-same motives; for, during the late discussions in the Chamber of Deputies,* upon the revisal of the tariff, a discriminating duty was laid upon the coal coming from this country, (by the unprecedented scheme of dividing France into three zones for that very purpose,) and it was defended, upon the plea of protection against inconvenience during war!

* The ignorance manifested in the French Chamber of Deputies upon commercial affairs, during the recent discussions, and the folly and egotism of the majority of the speakers, leave little hope of an increased intercourse between the two countries. M. Thiers openly avowed that we were to be manufacturing rivals, but political friends: we disclaim both these relationships. The French, whilst they are obliged to prohibit our fabrics from their own market, because their manufacturers cannot, they say, sustain a competition with us, even with a heavy protecting duty, never will become our rivals in third markets, where both will pay alike. The boast of the Prime Minister of France, is like the swagger of one who, having barricaded himself securely in his own house, blusters about giving battle in a neighbouring county. For the English ministry to form a mere political connection with the present unstable government and dynasty of France, to the exclusion of trading objects, would be to put us in partnership with a party in a desperate state of fortune, who resolved not to mend it. There can be no real alliance, unless by a union of interests. Schoolboys have sufficient knowledge of human nature to feel this, when they throw their marbles into a common bag, and become friends.

America, however, presents us with the severest lesson, as the moral of that policy which relies upon violence and war for the support or acquisition of commerce. In the report of the committee on manufactures of cotton, presented in the Congress of the United States, February 13, 1816—a paper drawn up with great moderation and delicacy, so far as relates to the allusions to British violence during the war just concluded—it is stated that, “Prior to the years 1806 and 1807, establishments for manufacturing cotton wool, had not been attempted, but in a few instances, and on a limited scale. Their rise and progress are attributable to embarrassments to which commerce was subjected; which embarrassments originated in causes not within the control of human prudence.” The causes here alluded to are the British orders in council and Bonaparte’s decrees. Then follows a statement of the quantity of cotton wool manufactured, at successive periods, in the United States:—

1800,	.	.	500 bales.
1805,	.	.	1000
1810,	.	.	10,000
1815,	.	.	90,000

And, afterwards, it goes on to say, in speaking of Great Britain—“No improper motives are intended to be imputed to that government. But does not experience teach a lesson that should never be forgotten, that governments, like individuals, are apt ‘to feel power and forget right!’ It is not inconsistent with national decorum, to become circumspect and prudent. May not the Government of Great Britain

be inclined, in analyzing the basis of her political power, to consider and regard the United States as her rival, and to indulge an improper jealousy, the enemy of peace and repose?" And, in proposing, on February 12, 1816, a new tariff to the *Senate*, in which cotton goods are subjected to $33\frac{1}{3}$ per cent. duty, the Secretary of the Treasury, in the course of his report, has this passage:—"But it was emphatically during the period of the restrictive system and of the war, that the importance of domestic manufactures became conspicuous to the nations, and made a lasting impression upon the mind of every statesman and every patriot." It is not, however, by state papers that we can fully estimate the sentiments of the nation at large. Immediately on the cessation of war, a strong feeling was manifested in all parts of the Union, in favour of protecting the manufactures of the country. This feeling prevailed with the democratic party, which was then in the ascendant, quite as much as with the federalists; although the former had, previously, been opposed to protecting duties. We cannot better illustrate this than by giving the following extract from a letter, written at this time by the great leader and champion of that party, Jefferson, who, in his "Notes on Virginia," written in 1785, had given his opinion, "that the workshops of Europe are the most proper to furnish the supplies of manufactures to the United States;" but, after the experience of the war, changed his opinion to the following:—"The British interdicted to our vessels all harbours of the globe, without they had at first proceeded to

some one of hers, there paid tribute, proportioned to their cargo, and obtained a license to proceed to the port of their destination. Compare this state of things with that of 1785, and say, whether an opinion, founded in the circumstances of that day, can be fairly applied to those of the present. We have experienced what we did not then believe, that there does exist both profligacy and power enough to exclude the United States from the field of intercourse with foreign nations. We, therefore, have a right to conclude, that, to be independent for the comforts of life, we must fabricate them for ourselves. We must now place the manufacturer by the side of the agriculturist. The question of 1785 is suppressed, or rather assumes a new form. The question is, Shall we manufacture our own comforts, or go without them at the will of a foreign nation? He, therefore, who is now against domestic manufactures, must be for reducing us to a dependence upon foreign nations. *I am not one of these."*

We have illustrated this matter with reference to the United States, more clearly than in relation to France, because, as we have elsewhere stated, it is our conviction, after giving considerable attention to the subject, that future danger to our manufacturing and commercial supremacy impends from America rather than from any European nation. It will be seen from the preceding quotations, that, from the first independence of that country, the democratic party was inimical to the establishing of protective duties; that party, under Jefferson, then was, and down to this day it continues to be, triumphant; and

we therefore possess unquestionable evidence that, by the hand of violence of England herself in 1806 and subsequently, the cotton manufacture was planted in the United States; and it may be seen, in the foregoing table, how, watered by the blood of our succeeding ten years' French war, it flourished an hundred and eighty fold! That manufacture is not destined to perish; it now equals the fifth of our own staple industry. We do not predict such a retributive visitation; we are proof against despair, when the energies of our countrymen are the grounds of hope; but if, in consequence of past wastefulness, or future extravagance and misgovernment here, a people beyond the Atlantic, free of debt, resolute in peacefulness, and of severe economy, should wrest, by the victory of "*cheapness*," that main prop of our national prosperity, the cotton manufacture, from our hands—how greatly will it aggravate a nation's sufferings, to remember the bitter historical truth, that that people was goaded to the occupations of the spinning-jenny and the loom, by the violence of Great Britain herself!

We mention these facts for the purpose of appealing, on a fresh ground, against the policy of maintaining enormous standing armaments. It has been seen that armies and ships cannot protect or extend commerce; whilst, as is too well known, the expenses of maintaining them oppress and impede our manufacturing industry—two sufficient grounds for reducing both. There is another motive in the above facts. That feeling which was awakened by our overwhelming power at sea, at the conclusion of

the war—the feeling of fear and mistrust lest we should be, in the words of the American state paper, just quoted, “apt to feel power and forget right”—is kept alive by the operation of the same cause, which tends still, as we have seen by the last debates in the French Chamber of Deputies, to afford excuses for perpetuating the restrictive duties upon our fabrics. The standing armies and navies, therefore, whilst they cannot possibly protect our commerce—whilst they add, by the increase of taxation, to the cost of our manufactures, and thus augment the difficulty of achieving the victory of “cheapness”—tend to deter rather than attract customers. The feeling is natural; it is understood in the individual concerns of life. Does the shopkeeper, when he invites buyers to his counter, place there, as a guard to protect his stock or defend his salesmen from violence, a gang of stout fellows, armed with pistols and cutlasses?

There is a vague apprehension of danger to our shores experienced by some writers, who would not feel safe unless with the assurance that the ports of England contained ships of war ready at all times to repel an attempt at invasion. This feeling arises from a narrow and imperfect knowledge of human nature, in supposing that another people shall be found sufficiently void of perception and reflection—in short, sufficiently mad—to assail a stronger and richer empire, merely because the retributive injury, thereby inevitably entailed upon themselves, would be delayed a few months by the necessary preparation of the instruments of chastisement. Such are

the writers by whom we have been told that Russia was preparing an army of 50,000 men, to make a descent upon Great Britain to subjugate a population of twenty-five millions! Those people do not, in their calculations, award to mankind even the instinct of self-preservation which is given for the protection of the brute creation. The elephant is not for ever brandishing his trunk, the lion closes his mouth and conceals his claws, and the deadly dart of the reptile is only protruded when the animal is enraged; yet we do not find that the weaker tribes—the goats, the deer, or the foxes—are given to assaulting those masters of the forest in their peaceful moods.

If that which constitutes cowardice in individuals, viz. the taking of undue and excessive precautions against danger, merits the same designation when practised by communities—then England certainly must rank as the greatest poltroon among nations. With twenty-five millions of the most robust, the freest, the richest, and most united population of Europe—enclosed within a smaller area than ever before contained so vast a number of inhabitants—placed upon two islands, which, for security, would have been chosen before any spot on earth, by the commander seeking for a *Torres Vedras* to contain his host—and with the experience of seven hundred years of safety, during which period no enemy has set foot upon their shores;—yet behold the government of Great Britain maintaining mighty armaments, by sea and land, ready to repel the assaults of imaginary enemies! There is no greater obstacle to cheap and good government than this feeling of

danger, which has been created and fostered for the very purpose of misgovernment.*

Instead of pandering to this unworthy passion, every journalist and public writer ought to impress upon the people of these realms, that, neither from the side of Russia, nor from any other quarter, is this industrious, orderly, moral, and religious community threatened; that it is only from decay and corruption within, and not from external foes, that a nation of twenty-five millions of free people—speaking one language, identified by habits, traditions, and institutions, governed by like laws, owning the same monarch, and placed upon an insular territory of less than 100,000 square miles—can ever be endangered. History, as we have before remarked, affords no example of a great empire—such, for instance, as Prussia—consolidated, enlightened, and moral, falling

* “Nothing is worthy of more attention, in tracing the causes of political evil, than the facility with which mankind are governed by their fears, and the degree of constancy with which, under the influence of that passion, they are governed wrong. The fear of Englishmen to see an enemy in their country, has made them do an infinite number of things which had a much greater tendency to bring enemies into their country than to keep them away.

“In nothing, perhaps, have the fears of communities done them so much mischief as in the taking of securities against enemies. When sufficiently frightened, bad Governments found little difficulty in persuading them that they never could have securities enough. Hence come large standing armies, enormous military establishments, and all the evils which follow in their train. Such are the effects of taking too much security against enemies.”—*Ency. Brit.* New edition. Vol. vii. p. 122.

a prey to barbarous invaders. But the British empire, with more than double the population and twenty times the wealth, possesses in the sea-girt nature of its situation, a thousand times the security of Prussia. To attempt to augment such a measure of safety by oppressive armaments, by land and sea—is it the part of wisdom and prudence, or of improvidence and folly?

But to return to that course of inquiry from which our argument has slightly swerved. We recur to the subject of protecting our commerce by armed ships; and it becomes necessary next to examine, whether, even supposing our naval force could defend our trade against the attacks of rivals, (which we have conclusively proved it cannot,) the cost of its protection does not, in some cases, more than absorb the gain of such traffic. The real or declared value of all the British manufactures and other produce exported to the Mediterranean, including the coast of Africa and the Black Sea, will, this year, amount to about £9,500,000. Under the groundless plea of protecting this commerce, we find, from the *United Service Journal* of June 1st, that a naval armament, mounting more than 1300 guns, being upwards of a third of the national force, is stationed within the Straits of Gibraltar. Taking the annual cost of the entire British navy at five millions, if we apportion a third part of this amount, and add the whole cost of the fortifications and garrisons of the Mediterranean, with their contingents at the war office, ordnance, &c., we shall be quite safe and within the mark, in estimating that our yearly expenditure in

guarding the commerce of this sea, amounts to upwards of three millions sterling, or one-third of our exports to those quarters. Now, what kind of a business would a wholesale dealer or merchant pronounce it, were his traveller's expenses, for escort alone, to come to 6s. 8d.* in the pound on the amount of his sales! Yet this is precisely the unprofitable character of our yearly trade to the

* We shall offer no excuses for so frequently resolving questions of State policy into matters of pecuniary calculation. Nearly all the revolutions and great changes in the modern world have had a financial origin. The exaction of the tenth penny operated far more powerfully than the erection of the Council of Blood, to stir the Netherlanders into rebellion in 1569 against the tyranny of Charles V. Charles I. of England lost his head, in consequence of enforcing the arbitrary tax called ship-money. The independence of America, and indirectly through that event, all the subsequent political revolutions of the entire world, turned upon a duty of threepence a pound, levied by England upon tea imported into that colony. Louis XVI. of France, when he summoned the first assembly of the Estates-General, did so with the declared object of consulting with them upon the financial embarrassments under which his Government was labouring: that was the first of a series of definite changes which eventually cost the king his life, and Europe twenty years of sanguinary wars. The second French Revolution, in 1830, was begun by the printers, who were deprived of the means of subsistence by the Ordinances of Charles X. against the press. How much of our own Reform Bill was the fruits of a season of distress?

Remembering that to nineteen-twentieths of the people (who never encounter a higher functionary than the tax-gatherer, and who meet their rulers only in duties upon beer, soap, tobacco, &c) politics are but an affair of pounds, shillings, and pence, we need not feel astonished at such facts as the preceding.

Mediterranean. Most people approach the investigation of a nation's affairs with the impression that they do not come under the same laws of common-sense and homely wisdom by which private concerns are governed – than which nothing can be more erroneous. America, which carries on a traffic one-half as extensive as Great Britain, with only a sixth*

* The following is the American navy in commission, February 27, 1836:—One ship of the line, four frigates, eleven sloops, six small vessels; and this after a threatened rupture with France, when every arrival from Europe might have brought a declaration of war! Compare this statement with the fact, that the British Government, with a force, at the same time, more than sixfold that of the United States, demanded an increase of more than the entire strength of the American navy, and with the same breath avowed the assurance of permanent peace; and let it be remembered, too, that the House of Commons voted this augmentation, under the pretence of protecting our commerce!

A few plain maxims may be serviceable to those who may in future have occasion to allude to the subject of commerce, in kings' speeches, or other state papers.

To make laws for the regulation of trade, is as wise as it would be to legislate about water finding a level, or matter exercising its centripetal force.

So far from large armaments being necessary to secure a regularity of supply and demand, the most obscure province on the west coast of America, and the smallest island in the South Pacific, are, in proportion to their wants, as duly visited by buyers and sellers as the metropolis of England itself.

The only naval force required in a time of peace for the protection of commerce, is just such a number of frigates and small vessels as shall form an efficient sea police.

If government desires to serve the interests of our commerce, it has but one way. War, conquest, and standing armaments cannot aid, but only oppress trade; diplomacy will never assist it—commercial treaties can only embarrass it. *The only mode*

of our navy expenses, and with no charge for maintaining colonies or garrisons, is, every year, realizing a profit to her people beyond that of her extravagant rival, in proportion to her more economical establishments; just exactly in the same way that the merchant or shopkeeper who conducts his business at a less cost for rent, clerks, &c. will, at each stock-taking, find his balance-sheet more favourable than that of his less frugal competitor. And the result will be in the one case as the other—that the cheaper management will produce cheaper commodities; which, in the event, will give a victory, in every market, to the more prudent trader.

But if, instead of the Mediterranean generally, we apply this test to an individual nation situated on that sea, we shall be able to illustrate the matter more plainly. In the same work from which we have before quoted, we find it stated that there are (June 1st) thirteen British ships of war lying at Lisbon, carrying 372 guns; *a force about equal to the whole American navy employed in protecting the interests of that commercial people all over the world.* That part of our annual navy estimates which goes to support this amount of guns, with contingent expenses fairly proportioned, will reach about £700,000. Turning to M'Culloch's Commercial Dictionary, (article, Oporto), we find that the declared value of exports of British manufactures and

by which the Government can protect and extend our commerce, is by retrenchment, and a reduction of the duties and taxes upon the ingredients of our manufactures and the food of our artisans.

produce to the entire kingdom of Portugal, reached, in 1831, (the latest year we have at this moment access to), £975,991. Here then we find, even allowing for increase, the escort costing nearly as much as the amount sold. In a word, Portugal is, at this moment, *paying* us at the rate of £500,000 a-year clear and dead loss! Our commerce with that country, on this 1st June, was precisely of the same ruinous character to the British nation as it would be in the case of an individual trader who turned over twenty thousand a-year, and whose expenses in clerks, watchmen, rents, &c. were £15,000. If anything could add to the folly of such conduct—conduct which, if proved against an individual brought before an insolvent debtors' tribunal, would be enough to consign him to prison—it is, to recollect that no part of such a nautical force can possibly be of the slightest service to our trade with Portugal, which is wholly independent of such coercion. Even our foreign secretary—a functionary who, during the last hundred and fifty years, has travelled abroad for this commercial empire with no other result to the national ledger but eight hundred millions of bad debts—has, we are happy to see, discovered this truth; for, on being questioned by Mr. Robinson, in the House,* as to a recent *grateful* augmentation of duties, upon British goods, amounting to 14 per cent., by the Government of Lisbon, our present foreign secretary, Lord Palmerston, avowed that the Portuguese were free to put whatever restraints they chose upon our trade with their

* House of Commons' Report, June 6.

country; and he merely threatened, if the tariff was not satisfactory, that he would attack them—how do our readers suppose?—with the thunder of our ships in the Tagus?—with soldiers and sailors?—with grape, musketry, shot, shell, and rocket?—all of which we provide for the protection of our commerce? No—with *retaliatory duties*!

To proceed to a worse case. On the 1st June, our naval force, on the West India station (see *United Service Journal*), amounted to 29 vessels, carrying 474 guns, to protect a commerce just exceeding two millions per annum. This is not all. A considerable military force is kept up in those islands, which, with its contingent of home expenses at the War Office, Ordnance Office, &c., must also be put to the debit of the same account. Add to which, our civil expenditure, and the charges at the Colonial Office on behalf of the West Indies; and we find, after due computation, that our whole expenditure, in governing and protecting the trade of those islands, exceeds, considerably, the total amount of their imports of our produce and manufactures. Our case here is no better than that of Jenkins & Sons, or Jobson & Co., or any other firm, whose yearly returns are less than the amount of their expenses for travellers, clerks, &c.; and, if the British empire escapes the ruin which, at the close of the year, must inevitably befall those improvident traders, it is only because we have other markets and resources—the Americas, and Asia, and the productive industry of these islands—to draw upon, to cover the annual loss sustained by our West India *possessions*. (?)

Or, for another parallel case, let our readers suppose that a Yarmouth house, engaged in the herring trade, were to maintain, besides the fishermen who, with their boats and nets, were employed in catching the fish, as many yachts, full of well-dressed lookers on, as should cost a sum equal to the value of all the herrings caught: that house would, at the end of the year, have sacrificed the whole of the money paid for the labour of the fishermen, besides the interest and wear and tear of the capital in boats, nets, &c. This is precisely the situation of our commerce with the West Indies at this moment. The British nation—the productive classes—pay, in taxation, as much to support well-dressed lookers on, in ships of war, garrisons, and civil offices, as their goods sell for to the West Indians: and, consequently, the whole amount expended for wages and material, together with the wear and tear of machinery, and loss of capital incurred in making cottons, woollens, &c., besides the hire of merchants' ships and seamen, to convey the merchandise to market—is irredeemably lost to the tax-payers of this country.* Here is a plain statement of the case; and in America, where everything is subjected to the test of common sense,

* We invite the attention of public spirited members of Parliament to these facts; they are submitted for the investigation of the conductors of the newspaper press. Every Chamber of Commerce in the kingdom is interested in the subject; this is not a question of party politics, but of public business. Every prudent trader must feel outraged at such a display of reckless extravagance by a commercial people; nay, every economical labourer and frugal housewife must be scandalised by this wasteful misdirection of the industry of the state.

the question would be at once determined by such an appeal to the homely wisdom of every-day life. If, in that country, it could be shewn that a traffic between New York and Cuba, to the yearly amount of ten millions of dollars, was conducted at a cost to the community, of the same amount of taxation, it would be put down by one unanimous cry of outraged prudence, from Maine to Louisiana. And how long will it be, before the policy of the Government of this manufacturing and commercial nation shall be determined by at least as much calculation and regard for self-interest as are necessary to the prosperity of a private business? Not until such time as Englishmen apply the same rules of common sense to the affairs of state, that they do to their individual undertakings. We will not stop to inquire of what use are those naval armaments to protect a traffic with our own territory? It is customary, however, to hear our standing army and navy defended, as necessary for the protection of our colonies, as though some other nation might otherwise seize them. Where is the *enemy* (?) that would be so good as to steal such *property*? We should consider it to be quite as necessary to arm in defence of our national debt!

Enough has been said to prove that, even if armaments for the protection of commerce could effect the object for which they are maintained, (although we have shewn the false pretensions of the plea of defending our trade), still the cost of supporting these safeguards may often be greater than the amount of profit gained. This argument applies more immediately to Turkey and the east; upon which countries

a share of public attention has lately been bestowed, far beyond the importance of their commerce.* It would be difficult to apportion the precise quota of our ships of war, which may be said to be, at this moment, maintained with a view to support our

* Pitt—whose views of commercial policy were, at the commencement of his career, before he was drawn into the vortex of war by a selfish oligarchy, far more enlightened and liberal than those of his great political opponents, (as witness the opposition by Burke and Fox to his French treaty, on the vulgar ground that the two nations were natural enemies), entertained a just opinion of the comparative unimportance of the trade of the east of the Mediterranean, after the growth of our cotton manufactures and the rise of the United States had given a new direction to the great flood of traffic.

“Of the importance of the Levant trade,” said Mr. Pitt, (see *Hansard’s Par. Hist.* vol. xxxvi., p. 59,) “much had formerly been said; volumes had been written upon it, and even nations had gone to war to obtain it. The value of that trade, even in the periods to which he had alluded, had been much exaggerated; but even supposing those statements to have been correct, they applied to times when the other great branches of our trade, to which we owe our present greatness and our naval superiority, did not exist: he alluded to the great increase of our manufactures—to our great internal trade—to our commerce with Ireland—with the United States of America; it was these which formed the sinews of our strength, and, compared with which, the Levant trade was trifling.” This was spoken in 1801; since which time, our trade with the United States has increased threefold; and, by the emancipation of South American colonies, another continent, of still greater magnitude, offers us a market which throws, by its superior advantages, those of the Levant and Turkey into comparative insignificance, and adds proportionably to the force of the argument in the above quotation. Yet we have *statesmen* of our day, who seem to have scarcely recognised the existence of America!

influence, or carry into effect the views of our foreign Secretary in the affairs of Constantinople. The late augmentation of the navy—the most exceptionable vote which has passed a Reformed House of Commons—although accomplished by the Ministry without explanation of its designs, further than the century-old pretence of protecting our commerce,* was generally believed to have been aimed at Russia in the Black Sea. Our naval force in the east was considerable previously; but, taking only the increase into calculation, it will cost more than three times the amount of the current profits of our trade with Turkey, whilst it can bestow no prospective benefits; since, even if we possessed Constantinople ourselves, we should only be able to command its trade by selling, as at Gibraltar, cheaper than other people. Our nautical

* Two letters have since been published in the *Manchester Guardian*, May 28, which are written by Lord Durham, and addressed to Mr. Gisborne, the British consul at Petersburg, giving the most positive assurances that no interruption will take place in our friendly commercial relations with Russia. Will the navy be reduced? We may apply the lines of Gay, written upon standing armies, a century ago, to sailors:

“Soldiers are perfect devils in their way—

When once they're raised, they're deuced hard to lay.”

Apropos of soldiers. In 1831, during the progress of the Reform Bill, and when the country was upon the eve of a new election, in which, owing to the excitement of the people, tumults were justly to be dreaded, an augmentation of the army, to the extent of 7680 men, was voted by the Parliament. Mr. Wynn, the then War Secretary, declared that this increase had no reference to Continental affairs. He should be rejoiced, he said, if the causes which led to this augmentation should cease, and enable the Government to reduce the estimates, before the end of three months. *No reduction yet—1836!* Where is Mr. Hume?

establishments devoted to the (*pretended*) guardianship of British *commercial* interests (for we can have no other description of interests a thousand miles off) in Turkey, are, the present year, costing the tax-payers of this country, upon the lowest computation, more than three times the amount of the annual profit of our trade with that country. Not content with this state of things, which leaves very little chance of future gain, some writers and speakers would plunge us into a war with Russia, in defence of Turkey, for the purpose of protecting this commerce; the result of which would inevitably be, as in former examples of wars undertaken to defend Spain or Portugal, that such an accumulation of expenses would ensue, as to prevent the possibility of the future profit upon our exports to the Ottoman empire even amounting to so much as should discharge the yearly interest of the debt contracted in its behalf.

We had intended and were prepared to give a summary of the wars—their causes and *commercial* consequences—in which Great Britain has been, during the last century and a half, from time to time, engaged; but we are admonished that our limited space will not allow us to follow out this design. It must suffice to offer, as the moral of the subject, that, although the conflicts in which this country has, during the last 150 years, involved itself, have, as Sir Henry Parnell* has justly remarked, in almost every instance, been undertaken in behalf of our commerce—yet, we hesitate not to declare that there is no instance recorded in which a favourable tariff, or a beneficial

* “Financial Reform.”

commercial treaty, has been extorted from an unwilling enemy at the point of the sword. On the contrary, every restriction that embarrasses the trade of the whole world, all existing commercial jealousies between nations, the debts that oppress the countries of Europe, the incalculable waste owing to the misdirected labour and capital of communities—these, and a thousand other evils, that are now actively thwarting and oppressing commerce, are all the consequences of wars! How shall a profession which withdraws from productive industry the ablest of the human race, and teaches them, systematically, the best modes of destroying mankind—which awards honours only in proportion to the number of victims offered at its sanguinary altar—which overturns cities, ravages farms and vineyards, uproots forests, burns the ripened harvest—which, in a word, exists but in the absence of law, order, and security:—how can such a profession be favourable to commerce, which increases only with the increase of human life—whose parent is agriculture, and which perishes or flies at the approach of lawless rapine? Besides, they who propose to influence, by force, the traffic of the world, forget that affairs of trade, like matters of conscience, change their very nature, if touched by the hand of violence: for as faith, if forced, would no longer be religion, but hypocrisy; so commerce becomes robbery, if coerced by warlike armaments.* If, then,

* “To me it seems that neither the obtaining nor the retaining of any trade, however valuable, is an object for which men may justly spill each other’s blood; that the true and sure means of extending and securing commerce, is the goodness and cheapness of commodities; and that the profit of no trade can ever be equal

war has, in past times, in no instance served the just interests of commerce, whilst it has been the sole cause of all its embarrassments; if, for the future, when trade and manufactures are brought under the empire of "cheapness," it can still less protect, whilst its cost will yet more heavily oppress it; and having seen that, if war could confer a golden harvest of gain upon us, instead of this unmixcd catalogue of evils, it would still be not profit but plunder;—having demonstrated these truths, surely we may hope to be spared a repetition of the mockery offered to this commercial empire, at the hands of its government and legislature, in the proposal to protect our commerce, *by an increase of the royal navy!* On behalf of the trading world, an indissoluble alliance is proclaimed with the cause of peace; and, if the unnatural union be again attempted, of that daughter of Peace, Commerce, whose path has ever been strewn with the choicest gifts of religion, civilization, and the arts, with the demon of carnage, War, loaded with the maledictions of widows and orphans, reeking with the blood of thousands of millions* of victims,

to the expense of compelling it, and of holding it by fleets and armies."—*Franklin's letter to Lord Howe, quoted in Hughes' History of England*, vol. xv. p. 254.

* Burke, in his first production—*A Vindication of Natural Society*—sums up his estimate of the loss of human life, by all the wars of past ages, at seventy times the population of the globe. It is not a little lamentable to reflect, that this great genius, among other *inconsequential* acts of his life, afterwards contributed, more than any other individual, to fan the flame of the French revolutionary wars, in which several millions more were added to his dismal summary of the victims of "*glory*." (?)

with feet fresh from the smoking ruins of cities, whose ears delight in the groans of the dying, and whose eyes love to gloat upon the dead:—if such an unholy union be hereafter proposed, as the humblest of the votaries of that commerce which is destined to regenerate and unite the whole world—we will forbid the bans!

It was our intention, had space permitted it, to have proved, from facts which we had prepared for the purpose, that no class or calling, of whatever rank in society, has ever derived substantial or permanent advantage from war. The agriculturist, indeed, might be supposed to be interested in that state of things which yielded an augmentation of price for his produce; and so he might, if hostilities were constant and eternal. But war is, at best, but a kind of intermittent fever; and the cure or death of the patient must at some time follow. This simile may be justly applied to the condition of the farmer during the French wars, and subsequently; at which former period, exposed to the effects of the bank restriction, of enormous loans, and of paper issues, the pulsation of prices sometimes alternated biennially, with dreadful consequences to the *febrile* sufferer, the agriculturist. What management or calculation, on the part of the farmer, could be proof against such fluctuations in the markets—arising from continental battles, or the violence or wickedness of a powerful and corrupt government as we find when wheat, which, in 1798, averaged £2. 10s 3*d* a-quarter, had, in 1800, reached £5. 13s 7*d*, and again sold, in 1802,

at £3. 7s 5d; a state of things which exposed the capitalist and the adventurer, the prudent man and the gambler, to one common fate of suffering and ruin? The dull and, to many, fatal peace, brought a state of convalescence more intolerable than the excitement of war. After more than twenty years of this latter species of suffering, the invalid is even now scarcely cured;—will he permit his wounds to be re-opened, merely that he may again undergo the self-same healing process? But the great majority of agriculturists, the labourers, so far from deriving any advantages from it, suffered grievously from the effects of that war which is sometimes excused or palliated on account of the pretended benefits it conferred upon the “landed interest.”

Whilst the prices of every commodity of food and clothing were rising, in consequence of the depreciation of the currency, and other causes incidental to the state of war, the labourers' earnings continued pretty much the same. The consequence was, that bread sometimes became a luxury, as is now the case in Ireland, too dear for the English husbandman's resources; that the cruel salt-tax interposed a barrier between him and that necessary of life, which frequently compelled him, when providing his winter's stock of provisions, to exchange one-half of his pig for the means of curing the other; that good beer rose to a price nearly as prohibitory to the peasant's palate, as port wine; and that, owing to the high cost of clothing, he possessed little more change of habiliments than the Russian serf of the present day. What greater proof can be required that war prices conferred

no blessings upon the husbandmen, than is afforded in the fact, that the poor rates were the heaviest in the agricultural districts, at a time when wheat was at its highest market price? In a word, at no period were the peasantry of this country enjoying so great an amount of comforts as they possess at this time; and the primary cause of which is, the twenty years' duration of peace.

Had we space to enter upon the statistics of our trade and manufactures, it would be easily shewn, by an appeal to a comparison of the bankruptcies in times of peace and war; by reference to the past and present condition of our manufacturing districts, as exemplified in the relative amounts of poor-rate, crime, and turbulence among the working classes; and in the comparative prosperity of the capitalists and employers—that these vital interests have no solid prosperity excepting in a time of peace. We feel that there is little necessity for enlarging upon this point: the manufacturing population do not require to be informed that they can derive no benefit from wars. So firmly are they convinced of the advantages of peace, that we venture to affirm, in the behalf of every thinking man of this the most important body in the kingdom, (in reference to our external and commercial policy), that they will not consent to a declaration of war, in defence of the trade of Turkey,* or for any other object, except to repel an act of aggression upon ourselves.

* At a meeting of a literary society, of which the author is a member, the subject of discussion lately was—"Would, or would not, the interests of the civilized world, and those of England in

A very small number of the shipowners—men who are sufficiently old to be able to look back to the time when the British navy swept the seas of their rivals—entertain an indistinct kind of hope that hostilities would, by putting down competition, again restore to them a monopoly of the ocean. This impression can only exist in minds ignorant altogether of the changes which have taken place in the world since the time when the celebrated Orders in Council were issued, thirty years ago. The United States, containing twice the population of that period, and the richest inhabitants in the world, with a mercantile marine second in magnitude only to our own, and with a government not only disburthened of debt, but inconveniently loaded with surplus riches—the United States will never again submit, even for a day, to tyrannical mandates levelled against their commerce at the hands of a British cabinet. The first effects, then, of another European war, in which England shall become unwisely a party, must be, that America will profit at our expense, by grasping the carrying trade of Europe; and the consequences which would, in all probability, ultimately follow, are, that the manufacturing and trading prosperity of this empire will pass into the hands of another people—the due reward of the

particular, be promoted by the conquest of Turkey by Russia?" Which, after an interesting debate, on the part of a body of as intelligent individuals as can be found in a town more deeply interested in the question than any in the kingdom, was decided *affirmatively*. The assumed possession was alone considered as affecting the interests of society. The morality of the aggression was not the question entertained, and, therefore, did not receive the sanction of the society.

peaceful wisdom of their government, and the just chastisement of the warlike policy of our own.

We are, then, justified in the assertion that no class or calling of society can derive permanent benefit from war. Even the aristocracy, which, from holding all the offices of the State, profited exclusively by the honours and emoluments arising from past hostilities, would derive no advantages from future conflicts. The governing power is now wholly transferred to the hands of the middling class; and, although time may be necessary to develop all the effects of this complete subversion of the former dominant influence, can any one for a moment doubt, that one of its consequences will be to dissipate among that more numerous but now authoritative class, those substantial fruits of power, the civil and military patronage, which, under the self-same circumstances, were previously enjoyed exclusively by the aristocracy? The electors of the British empire are much too numerous a body to possess interests distinct from those of the rest of their countrymen; and, as the nation at large can never derive advantages from war, we regard the Reform Bill, which has virtually bestowed upon the ten-pounders of this country the guardianship of the temple of Janus, to be our guarantee, for all future time, of the continuance of peace.

Before concluding, let us, in a very few words, recur to the subject more immediately under consideration. It has been customary to regard the question of the preservation of Turkey, not as an affair admitting of controversy, but as one determined by the wisdom of our ancestors; and the answer given

by Chatham, that "with those who contended we had no interest in preserving Turkey he would not argue," may probably be quoted to us. The last fifty years have, however, developed secrets for the guidance of our statesmen, which, had that great man lived to behold them, *he* would have profited by; *he*, at least, would not view this matter through the spectacles of his grandfather, were *he* now presiding at the helm of the state, and surrounded by the glare of light which our past unprofitable wars, the present state of the trade of the colonies, and the preponderating value of our commerce with free America,* throw around the question of going to war in defence of a nook of territory more than a thousand miles distant, *and over which we neither possess nor pretend to have any control.* That question must now be decided solely by reference to the interests of the people of this country at this present day, which we have proved are altogether on the side of peace and neutrality. Our inquiry is not as to the morality or injustice of the case—that is not an affair between Russia and ourselves, but betwixt that people and the Great Ruler of all nations; and we are no more called upon, by any such considerations, to wrest the attribute of vengeance from the Deity, and deal it

* It will be apparent to any inquiring mind, which takes the trouble to investigate the subject, that our commerce with America is, at this time, alone sustaining the wealth and trade of these realms. Our colonies do not pay for the expenses of protecting and governing them; leaving out of the question the interest of the debt contracted in conquering them. Europe has been a still more unprofitable customer.

forth upon the northern aggressor, than we are to preserve the peace and good behaviour of Mexico, or to chastise the wickedness of the Ashantees.

It has been no part of our object to advocate the *right* of Russia to invade Turkey or any other state; nor have we sought to impart too favourable a colouring to our portraiture of the government or people of the former empire; but what nation can fail to stand out in a contrast of loveliness, when relieved by the dark and loathsome picture which the Ottoman territory presents to the eye of the observer? It ought not to be forgotten that Russian civilization (such as it is at this day) is a gain from the empire of barbarism; that the population of that country, however low its condition may now be, was, at no former period, so prosperous, enlightened, or happy, as now; and that its rapid increase in numbers is one of the surest proofs of a salutary government: whilst, on the other side, it must be remembered that Mahometanism has sat, for nearly four centuries, as an incubus upon the fairest and most renowned regions of the earth; and has, during all that period, paralyzed the intellectual and moral energies of the noblest portions of the human species; under whose benumbing sway those countries which, in former ages, produced Solomon, Homer, Longinus, and Plato, have not given one poetic genius or man of learning to the world—beneath which the arts have remained unstudied by the descendants of Phidias and Praxiteles; whilst labour has ceased where Alexandria, Tyre, and Colchis, formerly flourished, and the accumulation of wealth is unknown in the land where Croesus himself

once eclipsed even the capitalists of the modern world.* If we refer to the criterion afforded by the comparison of numbers, we shall find, in the place of the overflowing population which, in former ages, poured out from these regions to colonize the rest of the world, nothing but deserted wastes and abandoned cities; and the spectacle of the inhabitants of modern Turkey melting away, whilst history and the yet existing ruins of empires attest the richness and fertility of its soil, affords incontestable proof of the destructive and impoverishing character of the government of Constantinople.

Our object, however, in vindicating Russia from the attacks of prejudice and ignorance, has not been to transfer the national hatred to Turkey, but to neutralise public feeling, by shewing that our only wise policy—nay, the only course consistent with the instinct of self-preservation—is to hold ourselves altogether independent of and aloof from the political relations of both these remote and comparatively barbarous nations. England, with her insular territory, her consolidated and free institutions, and her civilized and artificial condition of society, ought not to be, and cannot be, dependent for safety or pros-

* It is a saying of Montesquieu, that “God Almighty must have intended Spain and Turkey as examples to shew to the world what the finest countries may become when inhabited by slaves.” Yet these two nations are now the objects of British protection, and the source of considerable annual expenditure to the people of these realms; whilst the *statu quo* of Turkey seems to be the aim of our politicians. In speaking of the cost of our interference in Spain, we assume (safely enough) that the loan of arms by the British Government will not be repaid.

perity upon the conduct of Russia or Turkey; and she will not, provided wisdom governs her counsels, enter into any engagements so obviously to the disadvantage of her people, as to place the peace and happiness of this empire at the mercy of the violence or wickedness of two despotic rulers over savage tribes more than a thousand miles distant from our shores.

“While the Government of England takes ‘peace’ for its motto, it is idle to think of supporting Turkey,”* says one of the most influential and active *agitators* in favour of the policy of going to war with Russia. In the name of every artisan in the kingdom, to whom war would bring the tidings, once more, of suffering and despair; in the behalf of the peasantry of these islands, to whom the first cannon would sound the knell of privation and death; on the part of the capitalists, merchants, manufacturers, and traders, who can reap no other fruits from hostilities but bankruptcy and ruin; in a word, for the sake of the vital interests of these and all other classes of the community, we solemnly protest against Great Britain being plunged into war with Russia, or any other country, in defence of Turkey—a war which, whilst it would inflict disasters upon every portion of the community, could not bestow a permanent benefit upon any class of it; and one upon our success in which, no part of the civilized world would have cause to rejoice. Having the *interests* of all orders of society to support our argument in favour of peace, we need not dread war. *These*, and not the piques of diplomatists, the whims of crowned heads, the intrigues of ambassadresses, or

* “England, France, Russia, and Turkey,” 5th edition, p. 149.

schoolboy rhetoric upon the balance of power, will henceforth determine the foreign policy of our government. That policy will be based upon the *bona fide* principle (not Lord Palmerston's principle) of *non-intervention in the political affairs of other nations*; and from the moment this maxim becomes the load-star by which our government shall steer the vessel of the state—from that moment the good old ship Britannia will float triumphantly in smooth and deep water, and the rocks, shoals, and hurricanes of foreign war are escaped for ever.

If it be objected, that this selfish policy disregards the welfare and improvement of other countries—which is, we cordially admit, the primary object of many of those who advocate a war with Russia, in defence of Turkey, and for the restoration of Poland—we answer, that, so far as the objects we have in view are concerned, we join hands with nearly every one of our opponents. Our desire is to see Poland happy, Turkey civilized, and Russia conscientious and free; it is still more our wish that these ameliorations should be bestowed by the hands of Britain upon her less instructed neighbours: so far the great majority of our opponents and ourselves are agreed;—*how* to accomplish this beneficent purpose, is the question whereon we differ. They would resort to the old method of trying, as Washington Irving says, “to promote the good of their neighbours, and the peace and happiness of the world, by dint of the cudgel.” Now, there is an unanswerable objection to this method: experience is against it; it has been tried for some thousands of years, and has always been

found to fail. But, within our own time, a new light has appeared, which has penetrated our schools and families, and illuminated our prisons and lunatic asylums, and which promises soon to pervade all the institutions and relations of social life. We allude to that principle which, renouncing all appeals, through brute violence, to the mere instinct of fear, addresses itself to the nobler and far more powerful qualities of our intellectual and moral nature. This principle—which, from its very nature as a standard, tends to the exaltation of our species, has abolished the use of the rod, the fetters, the lash, and the strait waistcoat, and which, in a modified degree, has been extended even to the brute creation, by substituting gentleness for severity in the management of horses* and the treatment of dogs—this principle we would substitute for the use of cannon and musketry, in attempting to improve or instruct other communities. In a word, our opponents would “promote the good of their neighbours by dint of the cudgel:” we propose to arrive at the same end by means of our own national example. *Their* method, at least, cannot be right; since it assumes that they are at all times competent to judge of what is good for others—which they are not: whilst, even if they were, it would be still equally wrong; for they have not the jurisdiction over other states which authorizes them to do them even good by force of arms. If so, the United States and Switzerland might have been

* See the volume on *The Horse*, published by the *Society for the Diffusion of Useful Knowledge*, for the stress laid upon the superiority of mild treatment in the breaking of that animal.

justified, during the prodigal reign of George IV., in making an economical crusade against England, for the purpose of “cudgelling” us out of *our* extravagance and into *their* frugality, which, no doubt, would have been doing good to a nation of debtors and spendthrifts; instead of which, those countries persevered in their peaceful example. And we have seen the result: Swiss economy has enabled its people to outvie us in cheapness, and to teach us a lesson of frugal industry on our own fortress of Gibraltar. It is thus that the virtues of nations operate both by example and precept: and such is the power and rank they confer, that vicious communities, like the depraved individual, are compelled to reform, or to lose their station in the scale of society. States will all turn moralists, in the end, in self-defence.

Apply this principle to Russia, which, we will suppose, had conquered Turkey. Ten years, at least, of turbulence and bloodshed would elapse before its fierce Mahometan inhabitants submitted to their Christian invaders; which period must be one of continued exhaustion to the nation. Suppose that, at the end of that time, those plundered possessions became tranquillized; and the government, which had been impoverished by internal troubles, began to reflect and to look abroad for information as to the course of policy it should pursue. England, which had wisely remained at peace, pursuing its reforms and improvements, would, we have a right to assume, present a spectacle of prosperity, wealth, and power, which invariably reward a period of peace. Can there be a doubt that this *example* of the advantages

to be derived from labour and improvement, over those accruing from bloodshed and rapine—presented in the happiness of the peaceful, and the misery of the warlike nation—would determine the future career of Russia in favour of industry and commerce? The mere instinct of self-love and self-preservation must so decide. Had England, and all Europe, been plunged in war to prevent Russia from effecting her conquest, there would have been no such *example* of the fruits and blessings of peace at the close of hostilities, as we have here supposed her to present.

The influence which *example* has exerted over the conduct of nations—more potent and permanent than that of the “cudgel”—might form in itself the subject of a distinct and interesting inquiry. It should not be confined to the electric effects of state convulsions, which shock simultaneously the frame of neighbouring empires. The tranquil and unostentatious educational reforms in Switzerland, the temperance societies of America, and the railroads of England, exercise a sway as certain, however gradual, over the imitativeness of the whole world, as the “glorious” three days of France, or the triumph of the Reform Bill. But, however interesting the topic, our space does not allow us to pursue it further. Yet, even whilst we write, a motion is making in the House of Commons for a committee to inquire into the mode in which the American government disposes of its waste lands; a Swiss journal informed us, the other day, that, at a recent meeting of the *Vorort* of that country, a member called for a municipal reform measure, similar to the English Corporation Act; and,

in a Madrid journal, which is now before us, the writer recommends to the ministers of police a plan for numbering and lettering the watchmen of that metropolis, in imitation of the new police of London. Such is *example*, in a time of peace!

One word, at parting, between the author and the reader. This pamphlet, advocating peace, economy, and a moral ascendancy over brute violence, as well as deprecating national antipathies, has, as our excellent and public-spirited publisher will avouch, been written without the slightest view to notoriety or gain; (what fame or emolument can accrue from the anonymous publication of an eightpenny work?) and we therefore run no risk of invidious misconception, if, in taking leave of our readers, we do so, not with the usual bow of ceremony, but after a fashion of our own. In a word, as trade and not authorship is our proper calling, they will, we hope, excuse our attempting to make a bargain with them before we part. And, first, for that very small portion of our friends who will only step out of their way to do an acceptable act, provided good and sufficient claims be established against them: they will compel us, then, to remind them that this petty production (which we frankly admit reveals nothing new) contains as much matter as might have been printed in a volume, and sold at above ten times its charge; and, therefore, if those aforesaid customers approve the quality of the article, indifferent as it is, our terms of sale are, that they lend this pamphlet to, at least, six of their acquaintances for perusal. This is the amount of our demand; and, as we are dealing with "*good*"

men, we shall book the debt, with the certainty that it will be duly paid.

But by far the larger portion of our readers will be of that class who, in the words of Sterne, do good "they know not why, and care not wherefore:" to them we say—"If, in the preceding pages you discover a sincere, however feeble attempt to preserve peace, and put down a gigantic national prejudice; an honest though humble resistance to the false tenets of glory; an ardent but inadequate effort, by proving that war and violence have no unison with the true interests of mankind, to emancipate our moral and intellectual nature from the domination of the mere animal propensity of combativeness; if, in a word, you see sound views of commerce, just principles of government, freedom, improvement, morality, justice, and truth, anxiously, and yet all ineffectively advocated—then, and not otherwise, recommend this trifle to your friends, place it in the hands of the nearest newspaper editors, and bring it in every possible way before the eye of the public; and do this, not for the sake of the author or the merit of his poor production, but that other and more competent writers may be encouraged to take up, with equal zeal and far greater ability, the same cause—which, we religiously believe, is the cause of the best interests of humanity."

AUTHOR'S NOTE.—The circumstance of each of the preceding chapters having been stereotyped as soon as written, precludes the insertion of the few following words as a note in another and more appropriate part of the pamphlet.

The predominant feeling entertained with reference to Russia, and the one which has given birth to the other passions nourished

towards her, is that of fear—*fear* of the danger of an irruption of its people into western Europe, and the possibility of another destruction of civilization at the hands of those semi-barbarous tribes, similar to that of ancient Rome by their ancestors. But the Goths and Huns did not extinguish the power and greatness of the Romans: the latter sunk a prey, not to the force of external foes, but to their own internal vices and corruptions. Those northern nations which invaded that empire, and whom we stigmatize as barbarians, were superior in the manly qualities of courage, fortitude, discipline, and temperance, to the Roman people of their day. The Attilas and Alarics were equally superior to their contemporaries, the descendants of the Cæsars; and they did not sweep with the besom of destruction that devoted land, until long after the “dark, unrelenting Tiberius, the furious Caligula, the stupid Claudius, the profligate and cruel Nero, the beastly Vitellius, and the timid inhuman Domitian” had, by exterminating every ancient family of the republic, and extirpating every virtue and every talent from the minds of the people, prepared the way for the terrible punishment inflicted upon them.

Modern Europe bears no resemblance, in its moral condition, to that of ancient Rome, at the time we are alluding to. On the contrary, instead of a tendency towards degeneracy, there is a recuperative principle observable in the progress of reforms and improvements of the modern world, which, in its power of regeneration, gives ground for hope that the present and future ages of refinement will escape those evils which grew up alongside the wealth and luxury of ancient states, and ultimately destroyed them.

But the application of the power of chemistry to the purposes of war furnishes the best safeguard against the future triumph of savage hordes over civilized communities. Gunpowder has for ever set a barrier against the irruption of barbarians into western Europe. War, without artillery and musketry, is no longer possible; and these cannot be procured by such people as form the great mass of the inhabitants of Russia. Such is the power which modern inventions in warfare confer upon armies of men, that it is no exaggeration to say, that fifty thousand Prussian soldiers, with their complement of field pieces, rockets, and musketry, are more than a match for all the savage warriors, who, with their rude weapons, at different epochs, ravaged the world, from the time of Xerxes, down to that of Tamarlane; whilst those countless myriads, without the aid of gunpowder, would be powerless against the smallest of the hundreds of fortified places that are now scattered over Europe. Henceforth, therefore, war is not merely an affair of men, but of men, material, and money.

For some remarks upon the possibility of another irruption of barbarians, see Gibbon's *Rome*, ch. 8.

APPENDIX.

EXTRACTS FROM VARIOUS WRITERS, ILLUSTRATIVE
OF THE CONDITION OF TURKEY.

INDEED, it was impossible to conceive a more dismal scene of horror and desolation than the Turkish capital now presented. Every day some new atrocities were committed, and the bodies of the victims were either hanging against the doors and walls, or lying without their heads, weltering and trampled on, in the middle of the streets. At this season, flights of kites, vultures, and other unclean birds of prey, return after their winter's migration; and, as if attracted by the scent of carcasses, were seen all day wheeling and hovering about, so as to cover the city like a canopy, wherever a body was exposed. By night, the equally numerous and ravenous dogs were heard about some headless body, with the most dismal howlings, or snarling and fighting over some skull which they were gnawing and peeling. In fact, all that Byron has feigned of Corinth, or Bruce has described of Abyssinia, or you have elsewhere read that is barbarous, disgusting, and terrible in Eastern usages, was here realized.—*A Residence in Constantinople during the Greek and Turkish Revolutions. By the Rev. R. Walsh, LL.D.*

TURKISH DESOLATION.

My way lay along the shores of the Hellespont; the weather had now become moderate, and the storm was succeeded by a balmy sunshine. I cannot describe to you the exquisite beauty of the undulating downs which extend along the Asiatic side of this famous sea; the greensward sloping down to the water's edge, intersected every mile by some sweet wooded valley, running up into the country at one extremity, and terminating in the other by a romantic cove, over whose strand the lucid waves rippled. Here it was that the first picture of Turkish

desolation presented itself to me. While those smiling prospects which a good Providence seems to have formed for the delight of man, invite him to fix his dwelling among them, all is desert and desolate as the prairies of the Missouri. In a journey of nearly fifteen miles along the coast, and for half the length of the Hellespont, I did not meet a single human habitation; and this in the finest climate, the most fertile soil, and once the most populous country in the world.—*Walsh*.

A victory obtained at Patras was certified to the Sultan by the very intelligible gazette of a waggon loaded with the ears and noses of the slain, which were exposed in a heap, to gratify the feelings of pious Mussulmans. Dr. Walsh went to see this ghastly exhibition, which he thus describes in his *Residence in Constantinople*:—"Here I found, indeed, that the Turks did actually take human features as the Indians take scalps, and the trophies of ears, lips, and noses, were no fiction. At each side of the gate were two piles, like small haycocks, formed of every portion of the countenance. The ears were generally perforated and hanging on strings. The noses had one lip and a part of the forehead attached to them; the chins had the other, with generally a long beard; sometimes the face was cut off whole, and all the features remained together; sometimes it was divided into scraps, in all forms of mutilation. It was through these goodly monuments of human glory the Sultan and all his train passed every day, and, no doubt, were highly gratified by the ghastly aspects they presented; for here they were to remain till they were trampled into the mire of the street. Wherever the heaps were partly trodden down, the Turks passed over them with perfect indifference. The features, growing soft by putridity, continually attached themselves to their feet, and frequently a man went off with a lip or a chin sticking to his slippers, which were fringed with human beard, as if they were lined with fur. This display I again saw by accident on another occasion; and when you hear of sacks of ears sent to Constantinople, you may be assured it is a reality, and not a figure of speech. But you are not to suppose they are always cut from the heads of enemies, and on the particular occasion they are sent to commemorate. The number of Greeks killed at

Patras did not exceed perhaps one hundred; but noses, ears, and lips, were cut indiscriminately from every skull they could find, to swell the amount."

GEOGRAPHY AND THE USE OF THE GLOBES.

Lord Strangford sent the Porte a valuable present. He had brought with him a pair of very large globes from England; and, as the Turks had latterly shewn some disposition to learn languages, he thought it would be a good opportunity to teach them something else; and he determined to send them over to the Porte, and asked me to go with them and explain their object. . . . This important present was brought over with becoming respect. A Choreash went first with his baton of office; then followed two Janissaries, like Atlases, bearing worlds upon their shoulders; then myself, attended by our principal dragoman in full costume; and, finally, a train of Janissaries and attendants. When arrived at the Porte, we were introduced to the *Reis Effendi*, or Minister for Foreign Affairs, who with other ministers, were waiting for us. When I had the globes put together on their frames, they came round us with great interest; and the Reis Effendi, who thought, *ex officio*, he ought to know something of geography, put on his spectacles, and began to examine them. The first thing that struck them was the compass in the stand. When they observed the needle always kept the same position, they expressed great surprise, and thought it was done by some interior mechanism. It was mid-day, and the shadow of the frame of the window was on the floor. I endeavoured to explain to them that the needle was always found nearly in that direction, pointing to the north: I could only make them understand that it always turned towards the sun! The Reis Effendi then asked me to shew him England. When I pointed out the small comparative spot on the great globe, he turned to the rest, and said, "Keetchuk," little; and they repeated all round, "Keetchuk," in various tones of contempt. But when I shewed them the dependencies of the empire, and particularly the respectable size of India, they said, "Beeyuk," with some marks of respect. I also took occasion shew them the only mode of coming from thence to Constan-

tinople by sea, and that a ship could not sail with a cargo of coffee from Mocha across the isthmus of Suez. The new appointed dragoman of the Porte, who had been a Jew, and was imbued with a slighter tincture of information, was present; so, after explaining to him as much as I could make him comprehend, I left to him the task of further instructing the ministers in this new science. Indeed it appeared to me as if none of them had ever seem an artificial globe before, or even a mariner's compass.—*Walsh's Constantinople.*

It has been often remarked, that the Turks are rather encamped than settled in Europe. Far from improving the countries they govern, they scathe everything that comes within their reach; they destroy monuments, but build none; and when, at length, they are driven out by the chances of war or revolution, the only traces they leave of their sway are to be found in the desolation with which they everywhere encompass themselves. They may be compared to a flight of locusts, eating up and destroying whatever they alight upon; conferring no benefits in return; and, at last, when swept from the face of the earth by some kindly blast, only remembered from the havoc they have committed.—*Encyclopædia Britannica, new edition*, vol. iv., p. 129.—*Art. ATHENS.*

The barbarous anarchic despotism of Turkey, where the finest countries in the most genial climates in the world are wasted by peace more than any countries have been worried by war; where arts are unknown, where manufactures languish, where science is extinguished, where agriculture decays, where the human race itself melts away and perishes under the eye of the observer.—*Burke.*

The following is extracted from a work published in America, under the title of *Letters from Constantinople and its Environs by an American*: and attributed to the pen of Commodore Porter, the United States' *Chargé d'Affaires* at the Sublime Porte:—At length we discovered, about two miles to the left of our road, a Turkish village, which may always be known by the cypress trees and the burying ground; and, soon after this, an Armenian village, which may be known by the neat cultivation, the fine shady trees, the mill-race, and an air of primitive patriarchal sort

of comfort which seems to be thrown over it. You can, once in a while, see, at a distance, something like a petticoat moving about; and here are herds of cattle, flocks of sheep, goats, &c. But none of these are visible on your approach to a Turkish town, where all is still and gloomy. Shopkeepers you will find sitting cross-legged, waiting for their customers, too lazy and indolent to rise, for the purpose of taking down an article for inspection. It is a truth that I have never seen a Turk buy anything since I have been in the country. They are absolutely too indolent to buy. Neither have I ever seen a Turk work, if there is a possibility of his being idle. I have never seen one stand, if there was a possibility of his being seated. A blacksmith sits cross-legged at his anvil, and seats himself when he shoes a horse. A carpenter seats himself when he saws, bores holes, or drives a nail, planes, dubs with his small adze, or chops with his hatchet, (I believe I have named all his tools), if it be possible to do so without standing.

Nothing can be more gloomy than the appearance of things on entering a Turkish village. It is as quiet as the grave; the streets are narrow; the doors all shut and locked; the windows all latticed; not a human being to be seen in the filthy streets. A growling half-starved dog, or a bitch with her hopeful progeny, which depend for their subsistence on some depository of filth—is all you meet with of animated nature. You proceed through the inhospitable outskirts, despairing of meeting wherewith to satisfy the calls of nature, or a place of shelter, when you at length arrive at perhaps half a dozen filthy little shops of six feet square, in each of which you discover a solitary, squatting, silent, smoking Turk. He may glance his eyes at you, but will not turn his head: that would be too much trouble. Now, investigate the contents of these shops, and you will find as follows:—five, or, perhaps, six girths, for pack-horses, made of goats' hair; half a dozen halters for horses; fifteen or twenty pounds of rancid Russian butter; a small box, containing from one to two pounds of salt, and half a pound of ground pepper. A few bars of curd cheese, looking very like Marseilles soap; not much better in taste, and not so good for digestion. One quart of black salt olives; half a pound of sewing twine, cut into needlefuls;

one clothes line; half a dozen loaves of brown bread; and two bunches of onions, with a string of garlick. Nine times out of ten, you will find this to be the stock in trade of a Turkish village shopkeeper: and, over this, in his pitiful box, will he sit and smoke, day after day, without seeking a purchaser, or apparently caring whether one comes or not. If one calls and asks if he has any particular article, his answer is, simply, without raising his eyes, "Yoke." (No.) "Can you inform me where I may procure the article?" "Yoke." It is of no use to try to get anything more out of him. He is as silent as the grave. If he has the article asked for, he hands it to you, and names the price. When the money is laid on the counter, he merely brushes it with his hand through the hole in the till, and then relapses into his former apathy. No compliments, no "thanks for favours received, no call again if you please." Not the slightest emotion can be discovered. He never raises his eyes to see who his customer is or was; he sees nothing but the article sold, and the money; and he would disdain to spend a breath, or perform an action that was not indispensable to the conclusion of the bargain. . . . Give a Turk a mat to sleep on, a pipe, and a cup of coffee, and you give him the sum total of all earthly enjoyments.

The magnificent plain of Nice burst on our view. I have often dwelt with pleasure on the recollection of my agreeable surprise, when, descending the mountains at a place (I think) called the Vent of Cordova, the lovely view of the valley of Mexico first presented itself to my astonished sight. No one, I will venture to say, who has travelled from Vera Cruz to Mexico, but recollects the spot I have reference to, and felt as I have felt. Let him recall to his mind the splendour of that scene, and he may then imagine the plain of Nice, in all its fertility and beauty; not, indeed, so extensive, but more studded with trees, and equally so with villages, and presenting a picture to the eye and the imagination not to be surpassed. But, after a painful descent from our lofty eminence, by a very steep road, we found that, like the plain of Mexico, it was distance that gave to the scenery its principal enchantment. . . . Like Mexico, everything is beautiful in the distance: but nothing will

bear examination. View the scene closely, and the charm vanishes. The large and fertile fields are miles from any human habitation ; and, if a solitary being or two happen to be labouring near, you find them covered with rags and vermin. The shepherd, with his numerous flocks and herds, is a half-starved miserable wretch, covered with filthy sheep-skins, and disgusting to look at. His food, a dry crust, with perhaps an onion. Enter the villages, the streets are almost impassable from filth, and you meet only a ragged, dirty, squalid population of beggars. The noble fields and vineyards are the property of some hungry and rapacious lord, whose interests are confided to a cruel, hard-hearted, and rapacious aga. The few in power, revelling in affluence and splendour, have reduced the mass of the people to a degree of misery which appears insupportable. This is Turkey.

EXTRACTS FROM LARDNER'S CABINET CYCLOPÆDIA. HISTORY OF POLAND.

LEWIS. 1370—1382.

By yielding to the exorbitant demands of the turbulent and interested nobles—by increasing their privileges, and exempting them from the necessary contributions—he threw a disproportionate burden on the other orders of the state, and promoted that aristocratic ascendancy before which monarch and throne were soon to bow.—P. 101.

HEDWIG. 1382—1386.

The death of Lewis was speedily followed by troubles, raised chiefly by the turbulent nobles. Notwithstanding their oaths in favour of Mary and her husband Sigismund—oaths in return for which they had extorted such great concessions—they excluded both, with the design of extorting still greater from a new candidate. Sigismund advanced to claim his rights. A civil war desolated several provinces.—P. 102.

CASIMIR IV. 1445—1492.

Under this monarch aristocracy made rapid progress in Poland. When, on the conclusion of the war, he assembled a diet for the

purpose of devising means of paying the troops their arrears, it was resolved to resist the demand in a way which should compel him to relinquish it. Hitherto the diets had consisted of isolated nobles, whom the king's summons or their own will had assembled: as their votes were irresponsible and given generally from motives of personal interest or prejudice, the advantage to the order at large had been purely accidental. *Now*, that order resolved to exercise a new and irresistible influence over the executive. As every noble could not attend the diet, yet as every one wished to have a voice in its deliberations, *deputies* were elected to bear the representations of those who could not attend. . . . What in England was the foundation of rational freedom, was in Poland subversive of all order, all good government: in the former country, representation was devised as a check to feudal aristocracy, which shackled both king and nation; in the latter it was devised by the aristocracy themselves, both to destroy the already too limited prerogatives of the crown, and to rivet the chain of slavery on a whole nation.—P. 121—122. . . . This very diet annulled the humane decree of Casimir the Great, which permitted a peasant to leave his master for ill usage; and enacted that in all cases such peasant might be demanded by his lord; nay, that whoever harboured the fugitive should be visited with a heavy fine. This, and the assumption of judicial authority over their serfs, for peasants they can no longer be called, was a restoration of the worst evils of feudality.—P. 123.

JOHN ALBERT I. 1492—1506.

Evils of a nature still more to be dreaded menaced the murmuring kingdom. Aided by the Turks and Tartars, the Voivode of Wallachia, penetrated into Podolia and Polish Russia, the flourishing towns of which he laid in ashes, and returned with immense booty and 100,000 captives.—P. 125. . . . Under his reign, not only was the national independence in great peril, but internal freedom, the freedom of the agricultural class, was annihilated. At the diet of Petrikaus, (held in 1496), the selfish aristocracy decreed that henceforth no citizen or peasant should aspire to the ecclesiastical dignities, which they reserved for them-

selves alone. The peasantry, too, were prohibited from other tribunals than those of their tyrannical masters: they were reduced to the most deplorable slavery.—P. 127.

ALEXANDER. 1501—1506.

Thus ended a reign more deplorable, if possible, than that of John Albert.—P. 129.

SIGISMUND I. 1506—1548.

He had, however, many obstacles to encounter: neither the patriotism of his views nor the influence of his character could always restrain the restless tumults of his nobles, who, proud of their privileges and secure of impunity, thwarted his wisest views whenever caprice impelled them. Then the opposition of the high and petty nobility; the eagerness of the former to distinguish themselves from the rest of their order, by titles as well as riches; the hostility of both towards the citizens and burghers, whom they wished to enslave as effectually as they had done the peasantry; and, lastly, the fierceness of contention between the adherents of the reformed and old religion, filled his court with factions and his cities with discontent.—P. 136.

INTERREGNUM. HENRY DE VALOIS. 1572—1574.

The death of Sigismund Augustus, the last of the Jagellos, gave the Polish nobles what they had long wanted—the privilege of electing their monarchs, and of augmenting their already enormous powers, by every new *pacta conventa*.* At first, it was expected that the election would be made by deputies only; but, on the motion of a leading palatine, that, as all nobles were equal in the eye of the law, so all ought to concur in the choice of a ruler, it was carried by acclamation that the assembly should consist of the whole body of the equestrian order—of all at least who were disposed to attend. This was another fatal innovation; a diet of two or three hundred members, exclusive of the senators, might possibly be managed; but what authority could control 100,000?—Pp. 148—149.

* *Pacta conventa* meant a fresh bargain which was made by the nobles at every succeeding election of a king, and by which their own powers and leges were constantly augmented.

This feeble prince soon sighed for the banks of the Seine : amidst the ferocious people whose authority he was constrained to recognize, and who despised him for his imbecility, he had no hope of enjoyment. . . . The truth is, no criminal ever longed to flee from his fetters so heartily as Henry from his imperious subjects. . . . His flight was soon made known. . . . A pursuit was ordered ; but Henry was already on the lands of the Empire, before he was overtaken by the grand chamberlain : to whom he presented a ring and continued his journey.—P. 157.

STEPHEN. 1575—1586.

After the deposition of Henry, no less than five foreign and two native princes were proposed as candidates for the crown.

During the struggle of Stephen with his rebellious subjects, the Muscovites had laid waste Livonia. To punish their audacity, and wrest from their grasp the conquests they had made during the reign of his immediate predecessor, was now his object. War, however, was more easily declared than made ; the treasury was empty, and the nobles refused to replenish it. Of them it might truly be said, that, while they eagerly concurred in any burdens laid on the other orders of the state—on the clergy and the burghers—those burdens they would not so much as touch with one of their fingers. . . . The Polish nobles were less alive to the glory of their country, than to the preservation of their monstrous privileges, which they apprehended might be endangered under so vigilant and able a ruler. . . . However signal the services which this great prince rendered to the republic, he could not escape the common lot of his predecessors—the jealousy, the opposition, and the hatred of a licentious nobility ; nor could he easily quell the tumults which arose among them.—Pp. 158, 160, 161, 165.

SIGISMUND III. 1586—1632.

As usual, the interregnum afforded ample opportunity for the gratification of individual revenge, and of the worst passions of our nature. The feud between Zborowskis and Zamoyskis, was more deadly than ever. Both factions appeared in the field of election, with numerous bodies of armed adherents. The former

amounted to 10,000; the latter were less strong in number, but more select.—P. 167. . . . His reign was, as might be expected from his character, disastrous. The loss of Moldavia and Wallachia, of a portion of Livonia, and perhaps, still more, of the Swedish crown for himself, and the Muscovite for his son, embittered his declining years. Even the victories which shed so bright a lustre over his kingdom, were but too dearly purchased by the blood and treasure expended. The internal state of Poland, during this period, is still worse. It exhibits little more than his contentions with his nobles, or with his Protestant subjects; and the oppression of the peasants, by their avaricious, tyrannical, and insulting masters—an oppression which he had the humanity to pity, but not the vigour to alleviate.—P. 178.

ULADISLAS VII. (Vasa.) 1632—1648.

But all the glories of this reign, all the advantages it procured to the republic, were fatally counterbalanced by the haughty and inhuman policy of the nobles towards the Cossacks. In the central provinces of the republic, their unbounded power was considerably restrained in its exercise, by their habitual residence among their serfs; but the distant possessions of the Ukraine, never saw the face of their rapacious landlords, but were abandoned to Jews, the most unpopular and hateful of stewards. . . . Obtaining no redress from the diet—the members of which, however jealous of their own liberties, would allow none to the people—they had laid their complaints before the throne of the late monarch, Sigismund III. With every disposition, that monarch was utterly powerless to relieve them: Uladislas was equally well-intentioned, and equally unable to satisfy them. On one occasion, the latter prince is said to have replied to the deputies from these sons of the wilderness—"Have you no sabres?" Whether such a reply was given them or not, both sabres and lances were speedily in requisition. Their first efforts were unsuccessful. This failure rather enraged than discouraged them; and their exasperation was increased by the annihilation of their religious hierarchy, of their civil privileges, of their territorial revenues, and by their degradation to the rank of serfs—all which iniquities were done by the diet of nobles 1638. Nay, a resolution was taken, at the same time, to extirpate both their faith and them-

selves, if they shewed any disposition to escape the bondage doomed them. Again they armed, and, by their combination, so imposed on the troops sent to subdue them, that a promise was made them of restoring the privileges which had been so wickedly and so impolitically wrested from them. Such a promise, however, was not intended to be fulfilled; the Cossacks, in revenge, made frequent irruptions into the palatinate of the grand duchy, and no longer prevented the Tartars from similar outrages. Some idea may be formed of the extent of these depredations, when it is known that, from the princely domains of one noble alone, 30,000 peasants were carried away, and sold as slaves to the Turks and Tartars. Things were in this state, when a new instance of outrageous cruelty, inflicted upon the family of a veteran Cossack, Bogdan Chmielnicki by name—whose valour under the ensigns of the republic, was known far beyond the bounds of his nation—spread the flames of insurrection from one end of the Ukraine to the other, and lent fearful force to their intensity. . . . The bolt of vengeance, so long suspended, at length fell. At the head of 40,000 Tartars, and of many times that number of Cossacks, who had wrongs to be redressed as well as he, and whom the tale of *his* had summoned around him with electric rapidity, he began his fearful march. Two successive armies of the republic, which endeavoured to stem the tide of inundation, were utterly swept away by the torrent; their generals and superior officers led away captives, and 70,000 peasants consigned to hopeless bondage.

At this critical moment, expired Uladislas—a misfortune scarcely inferior to the insurrection of the Cossacks; for never did a state more urgently demand the authority of such a monarch. Under him, the republic was prosperous, notwithstanding her wars with the Muscovites and Turks; and, had his advice been taken, the Cossacks would have remained faithful to her, and opposed an effectual barrier to the incursions of the Tartars. But eternal justice had doomed the chastisement of a haughty, tyrannical, and unprincipled aristocracy, on whom reasoning, entreaty, or remonstrance, could have no effect, and whose understandings were blinded by hardness of heart. In their conduct during these reigns, there appears something like fatality, which may be

explained by a maxim confirmed by all human experience.—*Quem Deus vult perdere, prius dementat.**—Pp. 182—3—4—5.

INTERREGNUM—JOHN CASIMIR. 1698.

Never was *interregnum* more fatal than that which followed the death of Uladislas. The terrible Bogdan, breathing vengeance against the republic, seized on the whole of the Ukraine, and advanced towards Red Russia. He was joined by vast hordes of Tartars from Bessarabia and the Crimea, who longed to assist in the contemplated annihilation of the republic. This confederacy of Mussulmans, Socinians, and Greeks, all actuated by feelings of the most vindictive character, committed excesses at which the soul revolts;—the churches and monasteries were levelled with the ground—the nuns were violated—priests were forced, under the raised poniard, not merely to contract but to consummate marriage with the trembling inmates of the cloisters, and, in general, both were subsequently sacrificed; the rest of the clergy were dispatched without mercy. But the chief weight of vengeance fell on the nobles, who were doomed to a lingering death; whose wives and daughters were stripped naked before their eyes; and, after violation, were whipped to death in sight of the ruthless invaders.—P. 186.

Scarcely an evil can be mentioned which did not afflict the kingdom during the eventful reign of this monarch. To the horrors of invasion by so many enemies, must now be added those of domestic strife.—P. 196. . . . In this beautiful picture of disasters abroad and anarchy at home—of carnage and misery on every side, the disbanded military now took a prominent part.—P. 197. . . . In short, the reign of this monarch, while it exhibits a continued succession of the worst evils which have afflicted nations, is unredeemed by a single advantage to the republic; its only distinction is the fearfully accelerated impulse which it gave to the decline of Poland. The fact speaks little either for monarch or diet; but he must not be blamed with undue severity; his heart was better than his head; and both were superior to those of the turbulent, fierce, and ungovernable men who composed a body at once legislative and executive.

* Those whom God would destroy, he first deprives of reason.

MICHAEL. 1668—1673.

The first act of the diet of nobles was to declare that no Polish king should hereafter abdicate; the fetters he might assume were thus rendered everlasting.—P. 199. . . . At this time, no less than five armed confederacies were opposed to each other—of the great against the king—of the loyal in his favour—of the army in defence of their chief, whom Michael and his party had resolved to try, as implicated in the French party; of the Lithuanians against the Poles; and, finally, of the servants against their masters—the peasants against their lords.—P. 203.

JOHN III. (Sobieski.) 1674—1696.

Though he convoked diet after diet, in the hope of obtaining the necessary supplies, diet after diet was dissolved by the fatal veto; for the same reason, he could not procure the adoption of the many salutary courses he recommended, to banish anarchy, to put the kingdom on a permanent footing of defence, and to amend the laws.—P. 209.

FREDERIC AUGUSTUS. 1696—1733.

Frederic Augustus died early in 1733. His reign was one continued scene of disasters; many of which may be imputed to himself, but more, perhaps, to the influence of circumstances.—P. 225.

FREDERIC AUGUSTUS II. 1733—1763.

Though, under Frederic Augustus, Poland entered on no foreign war, his reign was the most disastrous in her annals. While the Muscovite and Prussian armies traversed her plains at pleasure, and extorted whatever they pleased; while one faction openly opposed another, not merely in the diet but on the field; while every national assembly was immediately dissolved by the veto the laws could not be expected to exercise much authority. They were, in fact, utterly disregarded; the tribunals were divided, r, forcibly overturned, and brute force prevailed on every side. The miserable peasants vainly sought the protection of their lords, who were either powerless or indifferent to their complaints. While thousands expired of hunger, a far greater number sought to relieve their necessities by open depredations. Bands of rob-

bers, less formidable only than the kindred masses congregated under the name of soldiers, infested the country in every direction Famine aided the devastations of both; the population, no less than the wealth of the kingdom, decreased with frightful rapidity—P. 232.

STANISLAS AUGUSTUS. 1763—1795.

During the few following years, Poland presented the spectacle of a country exhausted alike by its own dissensions and the arms of its enemies. The calm was unusual, and would have been a blessing could any salutary laws have been adopted by the diets. Many such, indeed, were proposed, the most signal of which was the emancipation of the serfs; but the very proposition was received with such indignation by the selfish nobles, that Russian gold was not wanted to defeat the other measures with which it was accompanied—the suppression of the veto, and the establishment of an hereditary monarchy.—P. 242. The republic was thus erased from the list of nations after an existence of near ten centuries. That a country without government, (for Poland had none, properly so called, after the extinction of the Jagellos, 1572,) without finances, without army, and depending for its existence, year after year, on tumultuous levies, ill-disciplined, ill-armed, and worse paid, should have so long preserved its independence, in defiance, too, of the powerful nations around, and with a great portion of its own inhabitants, whom ages of tyranny had exasperated, hostile to its success—is the most astonishing fact in all history. What valour must that have been, which could enable one hundred thousand men to trample on a whole nation naturally prone to revolt, and bid defiance to Europe and Asia—to Christian and Mussulman, both ever ready to invade the republic!—P. 256.

1793 AND 1853,

IN

THREE LETTERS.

“The passions were excited; democratic ambition was awakened; the desire of power under the name of Reform was rapidly gaining ground among the middle ranks, and the institutions of the country were threatened with an overthrow as violent as that which had recently taken place in the French monarchy. In these circumstances, the only mode of checking the evil was by engaging in a foreign contest, by drawing off the ardent spirits into active service, and, in lieu of the modern desire for innovation, rousing the ancient gallantry of the British nation.”—*Alison*, vol. iv. p. 7.

NOTE.

MR. COBDEN wrote his pamphlet on Russia mainly to combat the alarm which the supposed policy of that unwieldy empire had excited. It was therefore only natural, that, when in 1852-3, the public mind was filled with apprehensions of a French invasion, Mr. Cobden should thoroughly examine the grounds of the panic, and seek to recall the nation to a sense both of what was due to its own dignity and of the misery which could not fail to be provoked by the revival of the ancient distrust and enmity between the two countries. The series of admirable speeches which he delivered at this time will long live in the memory of his countrymen. Mr. Cobden saw a considerable analogy between the epoch of 1793 and that of 1853 ; for in both the same influences were at work to stimulate the fears of the people, and in both our nearest neighbour was the object of attack. The death of the Duke of Wellington, as well as the elevation of Louis Napoleon to supreme power, contributed to re-awaken the old sentiment of hostility towards France ; and, therefore, taking a typical sermon on the Iron Duke's death as, to some extent, the text of his pamphlet, Mr. Cobden proceeded to deduce from the authentic history of a former period the lessons which it taught, and to show that whatever might have been the traditions of states-

men, the true interests of both nations were based upon mutual friendship and good will.

This pamphlet excited the attention not only of England, but of the civilized world, and gave birth to eager discussions in every European and American journal. It was published, *in extenso*, in the columns of the "The Times" and of the "Manchester Examiner." Some fifty thousand copies of a cheap edition were circulated by the Peace Congress Committee alone. It passed through many editions; and its readers must have numbered hundreds of thousands.

The preface which Mr. Cobden wrote for the last edition, is reproduced on the following page.

PREFACE.

THE storm of adverse criticism, with which the first appearance of this pamphlet was assailed from certain quarters, did not surprise me. My censors had joined in the cry of "a French invasion," and my argument would therefore only prove successful in proportion as it impugned their judgment. Unless I could be shown to be wrong, they could not possibly be right. When the accuser is arraigned before the accused, it is not difficult to foresee what the judgment will be.—Time can alone arbitrate between me and my opponents; but even they must admit that the three months which have elapsed since I penned these pages have not diminished my chances of a favourable award.—

I have endeavoured with all humility to profit by the strictures so liberally bestowed on the historical part of my argument, by correcting any errors into which I might have inadvertently fallen. But I am bound to state that I have not found an excuse for altering a fact, or for adding or withdrawing a single line. I have been charged with an anachronism in having designated the hostilities which terminated in 1815 as "the war of 1793." I must confess that I have regarded this objection as something very like a compliment, in so far at least as it may without presumption be accepted in proof of the difficulties

in the way of hostile criticism;— for who is ignorant that Napoleon, the genius of that epoch, was brought forth and educated by us,—that he, until then an obscure youth, placed his foot upon the first step of the ladder of fame when he drove our forces from Toulon in 1793, and that it was in overcoming the coalitions created by British energy, and subsidized with English gold, that he found occasions for the display of his almost superhuman powers?

It is true that there were brief suspensions of hostilities at the peace, or, more properly speaking, the truce of Amiens, and during Bonaparte's short sojourn at Elba; but even if it were clear that Napoleon's ambition put an end to the peace, it would prove nothing but that he had by the ordinary workings of the moral law been in the mean time raised into a retributive agent for the chastisement of those who were the authors of the original war. I am bound however to add that, if we examine the circumstances which led to the renewal of hostilities, after the short intervals of peace, we shall find that our government showed quite as great readiness for war in 1803 and 1815, as they had done in 1793.

LETTER I.

MR. COBDEN TO THE REVEREND — — —.

December, 1852.

MY DEAR SIR,

ACCEPT my thanks for your kindness in forwarding me a copy of your Sermon upon the death of the Duke of Wellington. I am glad to observe, that like nearly all the commentators upon the achievements of the great warrior, you think it necessary to assume the fact that the war of the French Revolution was on our side defensive in its origin, and had for its object the vindication of the rights and liberties of mankind. A word or two upon that question by and by. But let us at least rejoice, that, thanks to the progress of the spirit of Christianity, we have so far improved upon the age of Froissart, as no longer to lavish our admiration upon warriors, regardless of the cause to which they may devote themselves. It is not enough now that a soldier possesses that courage which Gibbon designates "the cheapest and most common quality of human nature," and which a still greater* authority has declared to be the attribute of all men, he must be *morally* right, or he fights without our sympathy—he must present better title-deeds

* "I believe every man is brave."—Duke of Wellington, House of Lords, June 15, 1852.

than the record of his exploits, written in blood with the point of the sword, before he can lay claim to our reverence or admiration. This, at least, is the doctrine now professed; and the profession of such a faith, even if our works do not quite correspond, is an act of homage to an advanced civilization.

The Sermon with which you have favoured me, and which is, I presume, but one of many thousands written in the same spirit, takes still higher ground; it looks forward to the time when the religion of Christ shall have so far prevailed over the wickedness of this world, that men will “beat their swords into ploughshares and their spears into pruning-hooks: nation shall not lift up sword against nation, neither shall they learn war any more.” In the mean time, it condemns all war, excepting that which is strictly defensive, and waged in behalf of the dearest interests of humanity; it professes no sympathy for warriors, no admiration for the profession of arms, and sees less glory in the achievements of the most successful soldier than in the calm endurance of the Christian martyr, or the heroism of him who first ventures alone and unarmed as the ambassador of Jesus Christ among the heathen. “But,” says the sermon, “an occasion may undoubtedly arise when a resort to arms is necessary to rescue the nations of Europe from a tyrant who has trodden their liberties under foot. At such times God has never failed to raise up an instrument to accomplish the good work: such an occasion undoubtedly was the usurpation of Napoleon, and his

deadly hostility to this country, and such an instrument was the Duke of Wellington."

It is impossible to deny that the last extract gives expression to the opinion of the majority of the people of this country,—or at least to a majority of those who form opinions upon such matters,—as to the origin of the last war.

If we were discussing the wars of the Heptarchy, the question would not, as Milton has truly observed, deserve more consideration at our hands than a battle of kites and crows. But the impression that exists in the public mind respecting the origin and history of the last French war may affect the question of peace or war for the future:—it is already giving a character to our policy towards the government and people of France. There is a prevalent and active belief among us that that war arose from an unprovoked and unjust attack made upon us; that we were desirous of peace, but were forced into hostilities; that in spite of our pacific intentions, our shores were menaced with a French invasion; and that such having been our fate, in spite of all our efforts to avoid a rupture, what so natural as to expect a like treatment from the same quarter in future? and, as a rational deduction from these premises, we call for an increase of our "national defences."

Now, so far is this from being a true statement of the case, it is, I regret to say, the very opposite of the truth. I do not hesitate to affirm that nothing was ever more conclusively proved by evidence in a court of law than the fact, resting upon historical

documents, and official acts, that England was the aggressor in the last French war. It is not enough to say that France did not provoke hostilities. She all but went down on her knees (if I may apply such a phrase to a nation) to avert a rupture with this country. Take one broad fact in illustration of the conduct of the two countries. On the news of the insurrection in Paris, on the 10th of August, 1792, reaching this country, our ambassador was immediately recalled; not on the ground that any insult or slight had been offered to him, but on the plea, as stated in the instructions transmitted to him by the foreign minister, a copy of which was presented to Parliament, that the King of France having been deprived of his authority, the credentials under which our ambassador had hitherto acted were no longer available; and at the same time we gave the French ambassador at London notice that he would no longer be officially recognized by our government, but could remain in England only in a private capacity. How far the judgment of the present age sanctions the course our government pursued on that occasion may be known by comparing our conduct then with the policy we adopted in 1848, when our ambassador at Paris found no difficulty, after the flight of Louis Philippe, in procuring fresh credentials to the French Republic, and remaining at his post during all the successive changes of rulers, and when our own government hastened to receive the ambassador of France although he was no longer accredited from a crowned head.

But France being in 1792 already involved in a

war with Austria and Prussia, whose armies were marching upon her frontiers, and menaced at the same time by Russia, Sweden, Spain, and Sardinia, being in fact assailed openly or covertly by all the despotic powers of the Continent, nothing was so much to be dreaded by her as a maritime war with England, for which owing to the neglected state of her navy she was wholly unprepared.* By the Treaty of 1786, which then regulated the intercourse of the two countries, it was stipulated that the recalling or sending away their respective ambassadors or ministers should be deemed to be equivalent to a declaration of war between the two countries. Instead of seizing the opportunity of a rupture afforded by the conduct of England, the French government redoubled their efforts to maintain peace. Their ambassador remained in London from August till January following, in his private capacity, holding frequent correspondence with our foreign minister, Lord Grenville, submitting to any condition however humiliating, in order to procure a hearing, and not even resenting the indignity of having had two of his letters returned to him, one of them through the medium of a clerk in the Foreign office. At length upon the receipt of the intelligence of the execution of Louis XVIth, the French Ambassador received on the 24th January, 1793, from Lord Grenville, an order of the Privy Council peremptorily requiring him to leave the kingdom in eight days.

The sole ground alleged by the British Govern-

* England had, in 1792, 153 ships of the line ; and France, 86.
—*James' Naval History*.

ment for this step was the execution of the French King. England* which had 140 years before been the first to set the example to Europe of decapitating a monarch, England which, as is observed by Madame de Stael, has dethroned, banished, and executed more kings than all the rest of Europe, was suddenly seized with so great a horror for regicides as to be unable to tolerate the presence of the French ambassador!

The war which followed is said by the sermon before me to have been in defence of the liberties of Europe. Where are they? *Circumspice!*—I can only say that I have sought for them from Cadiz to Moscow without having been so fortunate as to find them. When shall we be proof against the transparent appeal to our vanity involved in the “liberties-of-Europe” argument? We had not forty thousand British troops engaged on one field of battle on the Continent during the whole war. Yet we are taught to believe that the nations of Europe, numbering nearly two hundred millions, owe their liberty to our prowess. If so, no better proof could be given that they are not worthy of freedom.

* The Marquis of Lansdowne speaking of the probable execution of the King of France, said, “Such a King was not a fit object for punishment, and to screen him from it every nation ought to interpose its good offices; but England, above all, was bound to do so, because he had reason to believe that what had encouraged the French to bring him to trial was the precedent established by England in the unfortunate and disgraceful case of Charles 1st.”—*Dec. 21, 1792.*

But, in truth, the originators of the war never pretended that they were fighting for the liberties of the people anywhere. Their avowed object was to sustain the old governments of Europe. The advocates of the war were not the friends of popular freedom even at home. The liberal party were ranged on the side of peace—Lansdowne, Bedford, and Lauderdale, in the Lords; and Fox, Sheridan, and Grey, in the Commons—were the strenuous opponents of the war. They were sustained out of doors by a small minority of intelligent men who saw through the arts by which the war was rendered popular. But, (and it is a mournful fact,) the advocates of peace were clamoured down, their persons and property left insecure, and even their families exposed to outrage at the hands of the populace. Yes, the whole truth must be told, for we require it to be known, as some safeguard against a repetition of the same scenes; the mass of the people, then wholly uneducated, were instigated to join in the cry for war against France. It is equally true, and must be remembered, that when the war had been carried on for two years only, and when its effects had been felt, in the high price of food, diminished employment, and the consequent sufferings of the working classes, crowds of people surrounded the King's carriage, as he proceeded to the Houses of Parliament, shouting, "Bread, bread! peace, peace!"

But, to revert to the question of the merits of the last French war. The assumption put forth in the Sermon that we were engaged in a strictly defensive war is, I regret to say, historically untrue. If you

will examine the proofs, as they exist in the unchangeable public records, you will be satisfied of this. And let us not forget that our history will ultimately be submitted to the judgment of a tribunal, over which Englishmen will exercise no influence beyond that which is derived from the truth and justice of their cause, and from whose decision there will be no appeal. I allude, of course, to the collective wisdom, and moral sense, of future generations of men. In the case before us, however, not only are we constrained, by the evidence of facts, to confess that we were engaged in an aggressive war, but the multiplied avowals and confessions of its authors and partisans themselves leave no room to doubt that they entered upon it to put down *opinions* by physical force, one of the worst, if not the very worst, of motives with which a people can embark in war. The question, then, is, shall we, in estimating the glory of the general who commands in such a war, take into account the antecedent merits of the war itself? The question is answered by the Sermon before me, and by every other writer upon the subject, professing to be under the influence of Christian principles; they all assume, as the condition precedent, that England was engaged in a defensive war.

There are two ways of judging the merits of a soldier: the one, by regarding solely his genius as a commander, excluding all considerations of the justice of the cause for which he fights. This is the ancient mode of dealing with the subject, and is still followed by professional men, and others of easy

consciences in such matters. These critics will, for example, recognize a higher title to glory, in the career of Suwarrow than in that of Kosciusko, because the former gained the greater number of important victories.

There is another and more modern school of commentators which *professes* to withhold its admiration from the deeds of the military hero, unless they be performed in defence of justice and humanity. With these the patriot Pole is greater than the Russian general, because his cause was just, he having been obviously engaged in a defensive contest, and contending, too, for the dearest rights of home, family and country.

Now, the condition which I think we may fairly impose upon the latter description of judges is, that they take the needful trouble to inform themselves of the merits of the cause in hand, so as to be competent to give a conscientious judgment upon it. In the case of the Duke of Wellington, the wars which he carried on with so much ability and success on the Continent, were in their character precisely the opposite of that upon which the Sermon ought, according to its own principle, to invoke the approbation of Heaven.

The Duke himself did not evidently recognize the responsibility of the commander for the moral character of his campaigns. His theory of "duty" gave him military absolution, and separated most completely the man from the soldier.

Some of the Duke's biographers have hardly done him justice, in the sense in which they have eulo-

gized him for the strict performance of his duty. Nor have they acted with more fairness towards their countrymen, for, by implication, they would lead us to infer that it is an exception to the rule when an Englishman does his duty. In the vulgar meaning they have attached to this trait in his character, they have lowered him to the level of the humblest labourer who does his duty for weekly wages. *Duty* with the Duke meant something more. It was a professional principle,—the military code expressed in one word. He was always subordinate to some higher authority, and acted from an impulse imparted from without; just as an army surrenders will, reason, and conscience to some one who exercises all these powers in its behalf. Sometimes it was the Queen; sometimes the public service; or the apprehension of a civil war; or a famine which changed his course, and induced him to take up a new position; but reason, or conscience, or will, seemed to have no more to do in the matter than in the manœuvres of an army. We did not know to his death what were the Duke's convictions upon Free Trade, Reform, or Catholic Emancipation. In his public capacity he never seemed to ask himself—what *ought* I to do? but what *must* I do? This principle of subordination, which is the very essence of military discipline, is at the same time the weak part and blot of the system. It deprives us of the man, and gives us instead a machine; and not a self-acting machine, but one requiring power of some description to move it. The best that can be said of it is, that when honestly adhered to, as in the

case of the Duke, it protects us against the attempts of individual selfishness or ambition. He would never have betrayed his trust, so long as he could find a power to whom he was responsible. *That* was the only point upon which he could have ever felt any difficulty. Had he been, like Monk, in the command of an army in times of political confusion, he would have gone to London to discover the legal heir to his "duty," whether it was the son of the Protector, or the remains of the Rump Parliament; but he would never have dreamed of selling himself to a Pretender, even had he been the son of a king. Should the time ever come (which Heaven forbid!) when the work which the Duke achieved needs to be repeated, it is not likely that there will be found one who will surpass him in the ability, courage, honesty and perseverance which he brought to the accomplishment of the task. But amongst all his high merits—and they place him in dignity and moral worth immeasurably above Marlborough or even Nelson—he would have been probably the last to have claimed for himself the title of the champion of the liberties of any people. No attentive reader of his dispatches will fall into any such delusion as to his own views of his mission to the Peninsula. Or if any doubt still remain, let him consult the classic pages of Napier.

Let me only refer you to the accompanying extracts from the History of the Peninsular War:—

"But the occult source of most of these difficulties is to be found in the inconsistent attempts of the British Cabinet to uphold national independence

with internal slavery against foreign aggression, with an ameliorated government. The clergy, who led the mass of the people, clung to the English, because they supported aristocracy and church domination. * * * * The English ministers hating Napoleon, not because he was the enemy of England, but because he was the champion of equality, cared not for Spain unless her people were enslaved. They were willing enough to use a liberal Cortes to defeat Napoleon, but they also desired to put down that Cortes by the aid of the clergy, and of the bigoted part of the people.”—Vol. iv. p. 259.

“It was some time before the church and aristocratic party discovered that the secret policy of England was the same as their own. It was so, however, even to the upholding of the Inquisition which it was ridiculously asserted had become objectionable only in name.”—Vol. iv. p. 350.

I could, also, refer you to another instructive passage (vol. iii. p. 271), telling us, amongst other things, that the “educated classes of Spain shrunk, from the British Government’s known hostility to all free institutions.” But I have carried my letter already to an unreasonable length, and so I conclude.

Yours faithfully

RICHARD COBDEN.

To the Reverend — — —.

LETTER II.

MR. COBDEN TO THE REVEREND — — —.

December, 1852.

MY DEAR SIR,

YOU ask me to direct you to the best sources of information for those particulars of the origin of the French war to which I briefly alluded in my last letter. What an illustration does this afford of our habitual neglect of the most important part of history,—namely, that which refers to our own country, and more immediately affects the destinies of the generation to which we belong! If *you* feel at a loss for the facts necessary for forming a judgment upon the events of the last century, how much more inaccessible must that knowledge be to the mass of the people. In truth, modern English history is a tabooed study in our common schools, and the young men of our Universities acquire a far more accurate knowledge of the origin and progress of the Punic and Peloponnesian wars, than of the wars of the French revolution.

The best record of facts, and especially of State papers, referring to our modern history is to be found in the *Annual Register*. These materials have been digested by several writers. The *Pictorial History of England* is not conveniently arranged for reference; and, although the facts are carefully given, the opinions, with reference to the events in question, have a strong Tory bias. The earliest and latest periods of this history are written in a liberal

and enlightened spirit; but that portion which embraces the American and French revolutions, fell somehow under the control of politicians of a more contracted and bigoted school. Alison, of whose views and principles I shall not be expected to approve, has given the best narrative of the events which followed the French revolution down to the close of the war. His work, which has passed through many editions, is admirably arranged for reference. Scott's *Life of Napoleon* is the most readable book upon the subject, but not the most reliable for facts and figures.

But if you would really understand the motives with which we embarked upon the last French war, you must turn to Hansard, and read the debates in both Houses of Parliament upon the subject from 1791 to 1796. This has been with me a favourite amusement; and I have culled many extracts which are within reach. Shall I put them together for you? They may probably be of use beyond the purposes of a private letter. But there is one condition for which I will stipulate. There must be a very precise and accurate attention to dates in order to understand the subject in hand. Banish from your mind all vague floating ideas arising out of a confusion of events extending over the twenty-two years of war. Our business lies with the interval from 1789, when the Constituent Assembly of France met, till 1793, when war commenced between England and France. Bear in mind we are now merely investigating the origin and cause of the rupture between the two countries.

The ten years from the close of the American war in 1783 to the commencement of the war with France in 1793, was a period of remarkable prosperity. To the astonishment of all parties, the separation of the American Colonies which had been dreaded as the signal for our national ruin, was followed by an increased commercial intercourse with the mother country. The mechanical inventions connected with the cotton trade and other manufactures, and the recent improvement in the steam engine, were adding rapidly to our powers of production; and the consequent demand for labour, and accumulation of capital diffused general comfort and well-being throughout the land. Such a state of things always tends to produce political contentment, and never were the people of this country less disposed to seek for reforms, still less to think of revolution, than when the attention of Europe was first drawn to the proceedings of the Constituent Assembly of France in 1789. The startling reforms effected by that body, and the captivating appeals to first principles made by its orators soon attracted the sympathies of a certain class of philosophical reformers in this country, who, followed by a few of the more intelligent and speculative amongst the artisan class in the towns, began to take an active interest in French politics. Amongst the most influential of the leaders of this party were Doctor Price and Doctor Priestley, and the Dissenters generally were ranked amongst their adherents. But the great mass of the population were strongly, almost fanatically on the side of the Church, which was of course op-

posed to the doctrines of the French Assembly; the spirit of hostility to dissenters broke forth in many parts of the country, and in Birmingham and other manufacturing places, it led to riots, and a considerable destruction of property. "It was not," said Mr. Fox,* "in his opinion a republican spirit that we had to dread in this country; there was no tincture of republicanism in the country. If there was any prevailing tendency to riot, it was on the other side. It was the high church spirit, and an indisposition to all reform which marked more than anything else the temper of the times."

Such was the state of the public mind when Mr. Burke published his celebrated *Reflections on the French Revolution*, a work which produced an instant and most powerful effect not only in England but upon the governing classes on the Continent. This production was given to the world in 1790: the date is all important; for bear in mind that the Constituent Assembly had then been sitting for a year only; that its labours had been directed to the effecting of reforms compatible with the preservation of a limited monarchy; and that such men as Lafayette and Necker had been taking a lead in its deliberations. Do not confound in your mind the proceedings of this body with those of the Legislative Assembly which succeeded to it the next year; or the National Convention which followed the year after. Do not disturb your fancy with

* House of Commons, May 25, 1792. All the speeches from which I have quoted were delivered in Parliament, and the quotations are from Hansard.

thoughts of the Reign of Terror: *that* did not begin till four years later. Burke's great philippic contains no complaint of the Constituent Assembly having interfered with us, or meditated forcing its Reforms upon other countries. It gives utterance to no suspicion of a warlike tendency on the side of the French. On the contrary, the author of the *Reflections*, in a speech upon the army estimates in the House of Commons on the 9th of February of this year (1790,) declared that "the French army was rendered an army for every other purpose than that of defence;" describing the French soldiers "as base hireling mutineers, and mercenary sordid deserters, wholly destitute of any honourable principle;" alleging on the same occasion, "that France is at this time in a political light to be considered as expunged out of the system of Europe;" and he asserted that the French "had done their business for us as rivals in a way in which twenty Ramilies or Blenheims could never have done it."

What then was the ground on which he assailed the French Government with a force of invective that drew from Fox six years later the following tribute to its fatal influence?

"In a most masterly performance, he has charmed "all the world with the brilliancy of his genius, "fascinating the country with the powers of his eloquence, and in as far as that cause went to produce this effect, plunged the country into all the "calamities consequent upon war. I admire the "genius of the man, and I admit the integrity and "usefulness of his long public life; I cannot, how-

“ever, but lament that his talents when in my
“opinion they were directed most beneficially to
“the interest of his country, produced very little
“effect, and that when he espoused sentiments dif-
“ferent from those which I hold to be wise and
“expedient, then his exertions should have been
“crowned with a success that I deplore.”

Read this famous performance again; and then, having freed your mind from the effects of its gorgeous imagery, and fascinating style, ask yourself what grounds it affords, what facts it contains to justify even an angry remonstrance, still less to lead to a war. From beginning to end it is an indictment against the representatives of the French people, for having presumed to pursue a course, in a strictly domestic matter, contrary to what Mr. Burke and the English, who are assumed to be infallible judges, held to be the wisest policy. Everything is brought to the test of our own practice, and condemned or approved in proportion as it is in opposition to or in harmony with British example. The Constituent Assembly is charged with robbery, usurpation, imposture, cheating, violence, and tyranny, for presuming to abolish the law of primogeniture, or appropriate their Church lands to secular purposes, making religion a charge upon the State; or limit to a greater degree than ourselves the prerogative of the Crown; or establish universal suffrage as the basis of their representation; changes which however unsuitable they may have been to the habits and disposition of Englishmen were yet such as have not been found

incompatible with the prosperity of the people of America, and which to a large extent are practically applied to the government of our own colonies.

But let us see what was done besides by this Assembly. Liberty of religious worship to its fullest extent was secured; torture abolished; trial by jury and publicity of courts of law were established; *lettres-de-cachet* abolished; the nobles and clergy made liable in common with other classes to taxation; the most oppressive imposts, such as those on salt, tobacco, *the taille*, &c. suppressed; the feudal privileges of the nobles extinguished; access to the superior ranks of the army, heretofore monopolized by the privileged class, made free to all; and the same rule applied to all civil employments.

I dwell on these particulars, because it was from this sweeping list of reforms, effected by the Constituent Assembly of France, and the sympathy which they excited amongst the more active and intelligent of our liberal politicians, that the war between the two countries really sprung. It was not to put down the Reign of Terror that we entered upon hostilities. That would have been no legitimate object for a war. But the Reign of Terror did not commence till nearly a year after the war began. Our indignation was not excited to blows in 1793, by the madness which afterwards possessed the National Convention, and which manifested itself in the alteration of the Calendar, the abolition of Christianity, and, finally, in the deposition of the Deity Himself. These were the consequences, not the causes of war. No, the war was

entered upon to prevent the contagion of those principles which were put forth in such captivating terms in 1789 and 1790 by the Constituent Assembly of France. The ruling class in England took alarm at a revolution going on in a neighbouring state where the governing body had abolished all hereditary titles, appropriated the Church lands to State purposes, and decreed universal suffrage as the basis of the representative system. "If," says Alison,* "the changes in France were regarded "with favour by one they were looked on with utter "horror by another class of the community. The "majority of the aristocratic body, all the adherents "of the Church, all the holders of office under the "Monarchy, in general, the great bulk of the opulent "ranks of society, beheld them with apprehension "or aversion."

From this moment, the friends and opponents of the French Revolution formed themselves into opposing parties, whose conduct, says Sir W. Scott,† resembled that of rival factions at a play, who hiss and applaud the actors on the stage as much from party spirit as from real critical judgment; while every instant increases the probability that they will try the question by actual force. Strange that to neither party should it have occurred, that to the twenty-four millions of Frenchmen interested in the issue, might be left the task of framing their own government, without the intervention of the people of England; and that the circumstance of a peculiar form of Constitution having been found

* Vol. iii. p. 108.

† Life of Napoleon, ch. vii.

suitable for one country, did not necessarily prove that it would be acceptable to the other!

But the Revolution in France produced a more decisive impression on the despotic powers of the Continent. As soon as the democratic measures of the Constituent Assembly were accomplished, and the powers of the King made subordinate to the will of the representative body, the neighbouring potentates took the alarm, and began to concert measures for enabling Louis XVI. to recover at least a part of his lost prerogatives. The Emperor of Germany, Leopold, the most able and enlightened Sovereign of Europe, who, as Grand Duke of Tuscany, had carried out many of those great economical and legal reforms which constitute the pride of modern statesmen, took the lead in these unwarrantable acts of intervention in the affairs of the French people. His relationship to the Queen of Louis XVI. (for they were both the offspring of Maria Theresa) afforded, however, an amiable plea for his conduct, which was not shared by his Royal confederates. Almost every crowned head on the Continent was now covertly, or openly, conspiring against the principle of self-government in France; and even the Sovereign of England, under the title of King of Hanover, was supposed to be represented at some of their private conferences. The result was the famous Declaration of Pilnitz, put forth in the names of the Emperor and the King of Prussia, in which they declared conjointly, "That they consider
 " the situation of the King of France as a matter
 ' of common interest to all the European Sove-

“ reigns. They hope that the reality of that
“ interest will be duly appreciated by the other
“ powers, whose assistance they will invoke, and that
“ in consequence, they will not decline to employ
“ their forces conjointly with their Majesties, in order
“ to put the King of France in a situation to lay the
“ foundation of a monarchical government, conform-
“ able alike to the rights of Sovereigns and the well-
“ being of the French nation. In that case, the
“ Emperor and the King are resolved to act promptly
“ with the forces necessary to attain their common
“ end. In the mean time, they will give the requi-
“ site orders for their troops to hold themselves in
“ immediate readiness for active service.”

It is all-important to observe the date of this Declaration—August 27, 1791—for upon the date depends entirely the question whether France or the Allied Powers were the authors and instigators of the war. Up to this period the French were wholly engrossed in their own internal reforms, and had not given the slightest ground for suspecting that they meditated an act of hostility against any foreign power. “ Whilst employed in the extension and
“ security of her liberties,” says Mr. Baines, in his able and candid history of these events, “ amidst the
“ struggle with a reluctant monarch, a discontented
“ priesthood, and a hostile nobility, she was menaced
“ at the same time by a sudden and portentous com-
“ bination of the two great military states—Prussia
“ under the dominion of Frederic William, and
“ Austria under the Emperor Leopold, brother to
“ Maria Antoinette, queen of France.” The French

were wholly unprepared for war. Not only were their finances in a ruinous state; the army had fallen into disorder; for whilst the common soldiers were enthusiastic partisans of the revolution, the officers, who were all of the class of nobles, were often its violent enemies, and many of them had fled the kingdom. Great as was at that time the dread of French principles, no foreign power felt any fear of the physical force of France; for every body shared the opinion of Burke, that that country had reduced itself to a state of abject weakness by its revolutionary excesses.

But the best proof that the French Government had not given any good ground of offence to foreign powers, is to be found in the fact that the declaration of the Allied Sovereigns contains no complaint of the kind. Their sole object, as avowed by them in this and subsequent manifestoes, was to restore the king to the prerogatives of which he had been deprived by his people. It needs no argument now to prove that this threat of an armed intervention in the internal affairs of France was tantamount to a declaration of war. Compare this conduct of the despotic powers in 1791 with the abstinence from all interference—nay, the punctilious disavowal of all right to interfere—in the domestic affairs of France in 1848, when the changes in the government of that country were of a far more sudden and startling character than those which had taken place at the time of the Declaration of Pilsnitz.

These proceedings of the Allied Powers were not sufficient to divert the French from the all-absorbing

domestic struggle in which they were involved. No acts of hostility immediately followed. The wise Leopold, who wished to support the authority of the King of France by other means than war, now exerted himself to assemble a congress of all the great powers of Europe, with a view to agree to a form of government for France. Whilst busying himself with this scheme, death put a sudden close to his reign, and his less prudent and pacific successor soon brought matters to extremities. In the meantime Russia, Sweden, Sardinia and Spain, assumed a more and more hostile attitude towards France. It was, however, from the side of Germany, where twenty thousand emigrant French nobles were menacing their native country with invasion, that the chief danger was apprehended; and it was to the Emperor that the French Government addressed itself for a categorical explanation of its intentions. The Note in answer demanded the re-establishment of the French monarchy on the basis which had been rejected by the nation in 1789; it required the restoration of the Church lands, part of which had been sold; and it ignored all that had been done by the Constituent Assembly during the last two years. But I will give a description of the Note by one whose leaning to the French will not be suspected.* “The demands of the Austrian Court went now, when fully explained, so far back upon the Revolution, that a peace negotiated upon such terms must have laid France and all its various parties (with the exception of a few of the First Assembly) at the

* Scott's Napoleon.

“ foot of the sovereign, and, what might be more
 “ dangerous, at the mercy of the restored emigrants.”
 The consequences of this Note may be described in
 the language of the same author. “ The Legislative
 “ Assembly received these extravagant terms as an
 “ insult on the national dignity ; and the king, what-
 “ ever might be his sentiments as an individual, could
 “ not, on this occasion, dispense with the duty his office
 “ as constitutional monarch imposed on him. Louis
 “ therefore had the melancholy task of proposing*
 “ to an Assembly filled with the enemies of his
 “ throne and person, a declaration of war against
 “ his brother-in-law† the Emperor.”

Thus began a war which, if not the longest, was
 the bloodiest and most costly that ever afflicted
 mankind. Whatever faults or crimes may be fairly
 chargeable upon the French nation for the excesses
 and cruelties of the Revolution up to this time (April,
 1792) it cannot be with justice made responsible for
 the commencement of the war. What *might* have
 happened if foreign governments had abstained from
 all interference, has frequently been a topic of spe-
 culation and hypothetical prophecy with those who
 whilst admitting that the French were not the ag-
 gressors, are yet unwilling to allow that war could
 have been avoided. If such speculations were worth
 pursuing, surely the experience we have since had
 in France and other countries would lead to the con-
 clusion that a nation, if unmolested from without, is

* 20th April, 1792.

† With his too common inaccuracy, the author has overlooked
 the previous death of Leopold.

never so little prone to meddle with its neighbours as when involved in the difficulties, dangers, and embarrassments of an internal revolution. But we have to deal with facts and experiences, and they prove that in the case before us France was the aggrieved and not the aggressive party.

It is true that France was the first to *declare* war; which is a proof that she had more respect for the usages and laws of nations than her enemies; for they were making formidable preparations for an invasion, under the plea of restoring order, and re-establishing the king on his throne, with the view, as they pretended, of benefiting the French people. They would not have declared war against France, but against the oppressors of France, as they chose to term the Legislative Assembly. The resistance they met with proved that they were opposed by the whole French nation; and, therefore, the only plea put forth in their justification fails them in the hands of the historian.

On the 25th July following, the Duke of Brunswick, when, on the eve of invading France, with an army of 80,000 Austrian and Prussian troops, and a formidable band of emigrant French nobles, issued a manifesto, in the name of Austria and Prussia, in which he states his conviction that "the majority of the inhabitants of France wait with impatience the moment when succour shall arrive, to declare themselves openly against the odious enterprises of their oppressors." To afford a full knowledge of the objects of the invaders, and of the atrocious spirit which animated them, I give the

following extract from the 8th article of this manifesto:—

“ The city of Paris and all its inhabitants, without
 “ distinction, shall be called upon to submit instantly,
 “ and without delay, to the King, to set that prince
 “ at full liberty, and to ensure to him and all the
 “ royal persons that inviolability and respect which
 “ are due, *by the laws of nature* and of all nations,
 “ to sovereigns; their Imperial and Royal Majesties
 “ making personally responsible for all events, on
 “ pain of losing their heads, pursuant to military
 “ trials, without hope of pardon, all the members
 “ of the National Assembly, of the Departments, of
 “ the Districts, of the Municipality, and of the Na-
 “ tional Guards of Paris, Justices of the Peace, and
 “ others whom it may concern. And, their Imperial
 “ and Royal Majesties further declare, on the faith
 “ and word of Emperor and King, that if the palace
 “ of the Tuilleries be forced or insulted, if the least
 “ violence be offered, the least outrage done, their
 “ Majesties, the King, the Queen, and the Royal
 “ Family, if they be not immediately placed in safety,
 “ and set at liberty, they will inflict on those who
 “ shall deserve it the most exemplary and ever me-
 “ morable avenging punishment, *by giving up the city*
 “ *of Paris to military execution, and exposing it to*
 “ *total destruction.*”

In an additional declaration, published two days later, after declaring that he makes no alteration in the 8th article of the former manifesto, he adds, in case the King, Queen, or any other member of the Royal Family should be carried off by any of the

factions, that “all the places and towns whatsoever, “which shall not have opposed their passage, and “shall not have stopped their proceeding, *shall incur “the same punishments as those inflicted on the inhabitants of Paris*; and the route which shall be taken “by those who carry off the King and the Royal “Family, shall be marked with a series of exemplary “punishments, justly due to the authors and abettors “of crimes for which there is no remission.”

Let it be borne in mind that these proclamations, worthy of Timoor or Attila, were issued at a moment when Louis XVI. was still exercising the functions of a Constitutional Sovereign in France; for it was not till the 10th of August that his palace was assailed by the armed populace, and he and his family were consigned to a prison. And, here, in taking leave of the belligerents on the Continent—for my task is confined to the investigation of the origin, and not the progress of the war—let it be observed that there is not a writer, whether French or English, who, in recording historically the dismal catalogue of crimes which from this time for a period of three years disgraced the domestic annals of France, does not attribute the ferocity of the people, and the atrocities committed by them, in a large degree, to the proclamation of the Duke of Brunswick, and the subsequent invasion of the French territory.

There is nothing so certain to extinguish the magnanimity, which is the natural attribute of great multitudes of men, conscious of their strength, as the suspicion of treachery on the part of those to whom they are opposed. It is under the excitement

of this passion that the most terrible sacrifices to popular vengeance have been made. The names of De Witt and Artevelde are remarkable among the victims to popular suspicion. But never was this feeling excited to such a state of frenzy as in Paris on the first news of the successes of the invading armies. The king, the nobility, the clergy, and all the opulent classes were suspected of being in correspondence with the foreigner; and the terrors of the populace pictured the Austrians already at the gates of Paris, and the royalists pouring forth to welcome them and to offer their aid in the vengeance which was to follow. It was under this impression of treachery that the horrible massacre of the political prisoners, on the 2nd of September took place.

But I prefer to give the testimony of a writer, who will have little sympathy, probably, for the main argument of this letter:—

“No doubt,” says Alison,* “can now exist that the interference of the Allies augmented the horrors and added to the duration of the revolution. All its bloodiest excesses were committed during or after an alarming, but unsuccessful invasion by the allied forces. The massacres of September 2nd were perpetrated when the public mind was excited to the highest degree by the near approach of the Duke of Brunswick; and the worst days of the government of Robespierre were, immediately after the defection of Dumourier, and the battle of Nerwinde threatened the rule of the Jacobins with destruction. Nothing but a sense of public danger

* Vol. v. p. 129.

“ could have united the factions who then strove with
“ so much exasperation against each other; the peril
“ of France, alone, could have induced the people to
“ submit to the sanguinary rule which so long desolated its plains. The Jacobins maintained their
“ ascendancy by constantly representing their cause
“ as that of national independence, by stigmatizing
“ their enemies as the enemies of the country; and
“ the patriots wept and suffered in silence, lest by
“ resistance they should weaken the state, and cause
“ France to be erased from among the nations.”

If facts have any logical bearing upon human affairs, I think I have shewn that the war was provoked by the allied powers. Let us now turn to the part performed by England in the events which followed.

From the moment of the appearance of Burke's famous *Reflections* in 1790, the character, objects, and proceedings of the Constituent Assembly occupied every day, more intensely the attention of the English public. The country took sides, and politicians, attacked or defended, according to their own views and aspirations, the conduct of the leaders of the revolution. Not only were the columns of the newspapers occupied with this all-engrossing topic, but the Press teemed with pamphlets and volumes in support of, or in opposition to, Burke's production. The most masterly of the latter class was the *Vindiciæ Gallicæ* of Sir James Macintosh, which advocated the fundamental principles of freedom and humanity with a far closer logic, and a style scarcely less attractive than that of his great opponent. By

degrees the character of the liberal party, comprising the Whigs and Dissenters, became involved to some extent in the fate of the Revolution; and their opponents took care to heap upon them all the odium which attached to the disorders and excesses of the French people. When the Jacobins, as the ultra party were nicknamed, became powerful in France, that detestable name was assigned to the English reformers, by their Tory enemies, who holding, as they did, the stamp of fashion in their hands, could give general currency to their damaging epithets.

But gradually, and almost imperceptibly, a change came over the character of the controversy. In a couple of years the tone of the dominant classes had altered; first, from cold criticism upon the revolution, to fierce invectives, then to menaces, and finally, to the cry for war; until at last the Tories and Liberals, instead of being merely contending commentators upon French politics, were involved in a fierce contest with each other upon the question of peace or war with the Government of France. From that time, all that remained of the liberal party, thinned as it was by defection, and headed heroically by Fox, ranged themselves on the side of peace. "The cry of peace," said Windham,* (Secretary at War), "proceeded from the Jacobin party in this country; and although every one who wished for peace was not a Jacobin, yet every Jacobin wished for peace."

* May 27, 1795.

There is every reason to suppose that Pitt* would have individually preferred peace. By a commercial treaty which he had entered into with France, a few years previously, he had greatly extended the trading relations of the two countries, and it is known that he was bent upon some important plans of financial and commercial reform. Upon the meeting of Parliament in 1792, he proposed reduced estimates for our military establishments, and nothing boded

* "No one more clearly than Mr. Pitt saw the ruinous consequences of the contest into which his new associates, the deserters from the Whig standard, were drawing or were driving him; none so clearly perceived or so highly valued the blessings of peace as the finance minister, who had but the year before accompanied his reduction of the whole national establishment with a picture of our future prosperity almost too glowing even for his great eloquence to attempt. Accordingly, it is well known, nor is it even contradicted by his few surviving friends, that his thoughts were all turned to peace. But the voice of the court was for war; the aristocracy was for war; the country was not disinclined towards war, being just in that state of excitable (though as yet not excited) feeling which is dependent on the Government, that is, upon Mr. Pitt, either to calm down into a sufferance of peace, or roused into a vehement desire of hostilities. In these circumstances, the able tactician, whose genius was confined to parliamentary operations, at once perceived that a war must place him at the head of all the power in the State, and, by uniting with him the more aristocratic portion of the Whigs, cripple his adversaries irreparably; and he preferred flinging his country into a contest which he and his great antagonist by uniting their forces must have prevented; but then he must also have shared with Mr. Fox the power which he was determined to enjoy alone and supreme."—Brougham's *Statesmen of George III.* series i. vol. i. p. 77-79.

the approach of war. The governing class in this country shared the opinions of Mr. Burke as to the powerless condition to which France had reduced herself by her internal convulsion. A veteran army of nearly 100,000 men, under experienced generals, was preparing to invade that country, which, torn by civil strife, with a bankrupt exchequer, and with the court, aristocracy, and clergy secretly favouring the enemy, seemed to offer a certain triumph to its assailants. Little doubt was felt that one campaign would "restore order" to France.

But the Duke of Brunswick's atrocious proclamation had produced upon the French people an effect very different from that which was expected. It is thus described by Alison:* "A unanimous spirit of resistance burst forth in every part of France; the military preparations were redoubled; the ardour of the multitude was raised to the highest pitch. The manifesto of the allied powers was regarded as unfolding the real designs of the Court and the emigrants. Revolt against the throne appeared the only mode of maintaining their liberties, or preserving their independence; the people of Paris had no choice between victory or death."

The campaign which followed proved disastrous to the invaders; and in September the Duke of Brunswick was in full retreat from the French territory. Soon afterwards Dumourier gained the battle of Jemmappes, and took possession of the Austrian Netherlands. On the Rhine, and the

* Vol. ii. p. 330.

frontier of Savoy, the French armies were also successful.

An instantaneous change of policy now took place in England. The government had looked on in silence, or with merely an occasional protestation or neutrality, whilst the allied armies were preparing to invade, and as every body believed, to occupy the French territory. But no sooner did the news of French victories arrive than the tone of our ministers instantly changed, and even Pitt, with all his cautiousness, was so thrown off his guard, that he disclosed the true object of the war which followed:—

“Those opinions,” said he,* “which the French
“entertained, were of the most dangerous nature;
“they were opinions professed by interest, inflamed
“by passion, propagated by delusion, which their
“success had carried to the utmost excess, and had
“contributed to render still more dangerous. For,
“would the Right Honourable Gentleman tell him
“that the French opinions received no additional
“weight from the success of their armies? Was it
“possible to separate between the progress of their
“opinions and the success of their armies? It was
“evident that the one must influence the other, and
“that the diffusion of their principles must keep
“pace with the extent of their victories. He was
“not afraid of the progress of French principles in
“this country, unless the defence of the country
“should be previously undermined by the introduc-
“tion of those principles.”

* Jan. 4, 1793.

And in the same speech he thus particularises the objects of his solicitude : —

“ They had seen, within two or three years, a
 “ revolution in France, founded upon principles
 “ which were inconsistent with every regular govern-
 “ ment, which were hostile to hereditary monarchy,
 “ to nobility, to all the privileged orders, and to
 “ every sort of popular representation, short of that
 “ which would give to every individual a voice in
 “ the election of representatives.”

The militia was now suddenly embodied, and Parliament was summoned to meet on the 13th of December. Before, however, we refer to this, the closing scene of the peace, it is necessary for a correct understanding of our relationship with France to take a review of the correspondence which was at the same time going on between our foreign secretary, and M. Chauvelin, the French ambassador at London. Here again, we must pay particular attention to dates.*

* And here let me give an extract from Scott's *Life of Napoleon*, illustrative of the looseness and inaccuracy with which history is sometimes written. I have explained the errors in italics :—

“ Lord Gower, the British ambassador, was recalled from
 “ Paris immediately on the King's execution.” [*He was re-
 called on the King's deposition in August, his execution not taking
 place till January following.*] “ The Prince to whom he was sent
 “ was no more; and, on the same ground, the French envoy at
 “ the Court of St. James, though not dismissed by his Majesty's
 “ Government, was made acquainted that the ministers no
 “ longer considered him as an accredited person.” [*The French
 ambassador was peremptorily ordered to leave this country in eight*

The correspondence commences with a letter, dated May 12, 1792, from M. Chauvelin to Lord Grenville, explaining the cause of the war between France and the Emperor, and complaining in the name of the King of the French that the Emperor Leopold had promoted a great conspiracy against France.

On the 18th June, 1792, M. Chauvelin alludes at greater length, in a letter to Lord Grenville, to the coalition formed on the Continent against France, and asks the British Government to exert its influence to stop the progress of that confederacy, and especially "to dissuade from all accession to this project all those of the allies of England whom it may be wished to draw into it!"

In reply to this letter, Lord Grenville declines to interfere with the allies of this country, to put an end to the confederacy against France, alleging that "the intervention of his counsels or of his good offices cannot be of use unless they should be desired by all the parties interested." [In direct contradiction to this, was the following passage in the King's speech, January 31, of this very year, 1792, on opening the session:—"Our intervention has also been employed with a view to promote a pacification between the Empress of Russia and the Porte; and conditions have been agreed upon *between us and the former of these powers which we undertook to recommend to the Porte*, as the establishment of peace on such terms appeared to

days, upon the news of the King's death reaching this country] And from these inaccurate data he draws the conclusion that we are not the aggressors in the war which immediately followed.

“ be, under all the circumstances, a desirable event
“ for the general interests of Europe.”]

On the news of the dethronement of the King of France in August, M. Chauvelin received notice, as has been before seen, that he would no longer be recognized by the English Government in his official character; and there was an interval of several months during which the correspondence was suspended. On the 13th December, as before stated, Parliament was hastily assembled: the King's speech announced that the militia had been embodied, and recommended an increase of the army and navy; it complained of the aggressive conduct of the French, and their disregard of the rights of neutral nations. [Not a syllable had been said in disapproval of the conduct of the allied powers when they began the unprovoked attack on France, an attack the complete failure of which was now known in England.] The speeches of the ministers and the majority in Parliament, in the debate on the address, were of a most warlike character. On the 27th of December, 1792, after these occurrences, (do not for a moment lose sight of the dates,) M. Chauvelin renews the correspondence with Lord Grenville. He begins by saying that he makes his communication at the request of his own government. After adducing the fact of his having remained in England since August, notwithstanding the recall of our ambassador Lord Gower from Paris, as “ a proof of the desire the French Government had to live on good terms with his Britannic Majesty,” he pro-

ceeds to complain that "a character of ill-will to which he is yet unwilling to give credit," has been observable in the measures recently adopted by the British Government, and he asks whether France ought to consider England as a neutral power or an enemy. "But in asking from the "ministers of his Britannic Majesty a frank and "open explanation as to their intentions with "regard to France, the Executive Council of the "French Government is unwilling they should "have the smallest remaining doubt as to the dis- "position of France towards England, and as to "its desire of remaining at peace with her; it has "even been desirous of answering beforehand all "the reproaches which they may be tempted to "make in justification of a rupture." He then proceeds to offer explanations upon the three reasons which he surmises might weigh with the English, and lead them "to break with the French Republic." The first has reference to the decree of the National Convention of the 19th November, offering fraternity to all people who wish to recover their liberty; the next, the opening of the Scheldt, consequent upon the conquest of the Austrian Netherlands; and thirdly, the violation of the territory of Holland. With respect to the decree of the 19th November offering assistance to all people wishing for liberty, he said: "The National Con- "vention never meant that the French Republic "should favour insurrections, should espouse the "quarrels of a few seditious persons, or in a word "should endeavour to excite disturbances in any

“neutral or friendly country whatever.” He then proceeds to say—“France ought to and will respect, not only the independence of England, but even that of those of her allies with whom she is not at war. The undersigned has therefore been charged formally to declare that she will not attack Holland so long as that power shall on its side confine itself towards her within the bounds of a strict neutrality.” He then refers to the only other question, the opening of the Scheldt, “a question irrevocably decided by reason and justice, of small importance in itself, and on which the opinion of England, and perhaps of Holland itself, is sufficiently known to render it difficult to make it seriously the single subject of war.”

M. Chauvelin says, in conclusion, “He hopes that the ministers of his Britannic Majesty will be brought back by the explanations which this note contains, to ideas more favourable to the re-union of the two countries, and that they will not have occasion, for the purpose of returning to them, to consider the terrible responsibility of a declaration of war, which will incontestably be their own work, the consequences of which cannot be otherwise than fatal to the two countries, and to human nature in general, and in which a generous and free people cannot long consent to betray their own interests, by serving as an auxiliary and a reinforcement to a tyrannical coalition.”

The reply of Lord Grenville, dated December

31, begins in the following haughty fashion:—"I have received, Sir, from you a note, in which, styling yourself minister plenipotentiary of France, you communicate to me, as the King's secretary of state, the instructions which you state to have yourself received from the Executive Council of the French republic. You are not ignorant, that since the unhappy events of the 10th August, the King has thought proper to suspend all official communication with France." The rest of the letter repels with little ceremony the advances of the French minister, and subjects his pleas and excuses to a cold and incredulous criticism. It reiterates the complaints respecting the Decree of the 19th November, the opening of the Scheldt, and the violation of the territory of Holland. "If France," said Lord Grenville, "is really desirous of maintaining friendship and peace with England, she must shew herself disposed to renounce her views of aggression and aggrandisement, and confine herself within her own territory, without insulting other governments, without disturbing their tranquillity, or violating their rights." [It would have added much to the force of this remonstrance if a similar tone had been taken a year earlier, when the famous Declaration of Pilnitz was published.]

M. Chauvelin, notwithstanding this repulse, again addresses Lord Grenville, January 7, 1793, bringing under his notice the Alien bill just introduced into Parliament, and which contained, as he alleged, provisions, so far as French citizens were concerned,

inconsistent with the letter and spirit of the treaty of commerce entered into by France and England in 1786; and he concludes by asking to be informed whether, “under the general denomination “of foreigners, in the bill on which the Houses are “occupied, the Government of Great Britain means “likewise to include the French.” This letter is returned to the writer by Lord Grenville, the same day, accompanied with a short note, declaring it to be “totally inadmissible, M. Chauvelin assuming “therein a character which is not acknowledged.”

Unable to obtain a hearing in his official capacity, M. Chauvelin abandons the former style of his letters, which ran—*the undersigned minister plenipotentiary, &c.*, and now addresses a letter to Lord Grenville, beginning “My Lord,” and dropping all allusion to his own diplomatic quality. In this letter, he complains that several vessels in British ports freighted with grain for the French Government had been stopped, contrary to law; he states that he has been informed by respectable authorities that the custom-houses had received orders to permit the exportation of foreign wheat to all ports except those of France; and he goes on to say, “I “should the first moment of my knowing it, have “waited upon you, my Lord, to be assured from “yourself of its certainty, or its falsehood, if the “determination taken by his Britannic Majesty, in “the present circumstance, to break off all communication between the governments of the two “countries had not rendered friendly and open

“steps the more difficult in proportion as they became the more necessary.”

And he adds:—“But I considered, my Lord, that when the question of war or peace arose between two powerful nations, that which manifested the desire of attending to all explanations, that which strove the longest to preserve the last link of union and friendship, was the only one which appeared truly worthy and truly great. I beseech you, my Lord, in the name of public faith, in the name of justice and of humanity, to explain to me facts which I will not characterize, and which the French nation would take for granted by your silence only, or by the refusal of an answer.”

Lord Grenville's answer, dated 9th Jan., 1793, evades the question:—“I do not know,” says he, “in what capacity you address me, in the letter which I have just received; but in every case it would be necessary to know the resolutions which shall have been taken in France, in consequence of what has already passed, before I can enter into any new explanations, especially with respect to measures founded, in a great degree, on those motives of jealousy and uneasiness which I have already detailed to you.”

Nothing daunted, the indefatigable Frenchman renews the correspondence on the 11th. But having resumed the diplomatic style of “the undersigned minister plenipotentiary,” his letter, which states that the “French Republic cannot but regard the conduct of the English Government as a manifest infraction

“ of the treaty of commerce concluded between the
 “ two powers, and that, consequently, France ceases
 “ to consider herself as bound by that treaty, and
 “ that she regards it from this moment as broken
 “ and annulled,” was returned to him by *Mr. Aust*,
 a clerk, probably, in the Foreign Office, with the
 following note :—

“ Mr. Aust is charged to send back to M. Chauvelin
 “ the enclosed paper received yesterday at the office
 “ for Foreign Affairs.”

Next, we have a letter from M. Chauvelin to Lord Grenville, written in an unofficial form, dated January 12th, stating that he had just received a messenger from Paris, and soliciting a personal interview ; which request is granted, on condition that the communication be put upon paper. On the following day M. Chauvelin communicates to Lord Grenville a copy of a paper which he had received from M. Le Brun, the foreign minister of France. This dispatch contains the strongest expressions of a desire to maintain amicable relations with England. “ The sentiments
 “ of the French nation towards the English,” says the foreign minister of France, “ have been manifested
 “ during the whole course of the revolution, in so
 “ constant, so unanimous a manner, that there cannot
 “ remain the smallest doubt, of the esteem which it
 “ has vowed them, and of its desire of having them
 “ for friends.” He then proceeds to discuss, at length, the several topics in dispute between the two countries. As respects the obnoxious decree of the 19th November, every effort is made to explain away its offensive meaning, and it is at last admitted that the object

contemplated "might, perhaps, be dispensed with
" by the National Convention, that it was scarcely
" worth the while to express it, and it did not deserve
" to be made the object of a particular decree."

Assuming that the British Government is satisfied with the declaration made on the part of the French, relative to Holland, the paper proceeds, at length, into the question of the opening of the Scheldt, which is justified by an appeal to the rights of nature and of all the nations of Europe. The Emperor of Germany concluded the treaty for giving the exclusive right of the navigation of the Scheldt to the Dutch without consulting the Belgians. "The Emperor, to
" secure the possession of the Low Countries, sacrificed, without scruple, the most inviolable of rights." And, further, "France enters into war with the
" House of Austria, expels it from the Low Countries,
" and calls back to freedom those people whom the
" Court of Vienna had devoted to slavery." The paper proceeds to say that France does not aim at the permanent occupation of the Low Countries, and that after the close of the war, if England and Holland still attach some importance to the re-closing of the Scheldt, they may put the affair into a direct negotiation with Belgium. If the Belgians, by any motive whatever, consent to deprive themselves of the navigation of the Scheldt, France will not oppose it.

Lord Grenville in his reply to this letter (January 18, 1793) begins by saying, "I have examined, Sir,
" with the greatest attention, the paper which you
" delivered to me on the 13th of this month. I

“ cannot conceal from you that I have found nothing
 “ satisfactory in the result of that note.” The rest of the letter is either a repetition of the former complaints, or an attempt to extract fresh sources of dispute from the preceding communication. After the exchange of two other unimportant letters, we come to the *denouement*. On the 24th January, on the news reaching London of the execution of Louis XVI., Lord Grenville transmits to M. Chauvelin the order of the Privy Council, requiring him to leave the country in eight days.

I have given these copious extracts from this most portentous of all diplomatic correspondence, not to exonerate you from the trouble of reading the remainder, for every word ought to be studied by those who wish to understand the origin of the war, but to enable you to form a correct opinion of the *animus* which influenced the two parties. Contrast the conciliatory, the almost supplicatory tone of the one, with the repulsive and haughty style of the other, and then ask—which was bent upon hostilities, and which on peace? Recollect that these correspondents were the representatives respectively of sixteen millions of British and twenty-four millions of French, and then say whether the insolent, *de-haut-en-bas* treatment received by the latter could have been intended for any other purpose but to provoke a war. Observe that the more urgent the Frenchman became in his desire to explain away the ground of quarrel, the more resolute was the English negotiator to close up the path to reconciliation;—forcing upon us the conviction that what the British Government really

dreaded at that moment was, not the hostility but, the friendship of France.

And, now, a word as to the alleged grounds of the rupture.. It must be observed in the first place, that there is no complaint on our part of any hostile act, or even word being directed against *ourselves*. The bombastic decree* of the National Convention—one of the midnight declarations of that excited body, was put prominently in the bill of indictment, but it was never alleged that it was specially levelled at this country. It was aimed at the *governments* of the Continent in retaliation for their conspiracies against the French revolution. “If you invade us with bayonets, we will invade you with liberties,”—was the language addressed by the orators of the Convention to the despotic powers. That this decree was, however, a fair ground of negotiation by our government cannot be denied, and it is evident from the desire of the French minister to explain away its obnoxious meaning, going so far even as to admit that “perhaps” it ought not to have been passed, that a little more remonstrance in an earnest and peaceful spirit, would have led to a satisfactory explanation on this point. In fact, within a few months of this time the decree was rescinded.

* Decree of Fraternity. The National Convention declares in the name of the French nation that it will grant fraternity and assistance to all people who wish to recover their liberty; and it charges the Executive power to send the necessary orders to the generals to give assistance to such people, and to defend those citizens who have suffered or may suffer in the cause of liberty.
-- 19th November, 1792.

With respect to the Dutch right to a monopoly of the Scheldt:—if that was really one of the objects of the war, the twenty-two years of hostilities might have been spared; for if there was any one thing, besides the abolition of the slave trade, which the Congress of Vienna effected at the close of the war, to the satisfaction of all parties, and with the hearty concurrence of England, it was setting free the navigation of the great rivers of Europe. Nothing need be said about the remaining question of the inviolability of the territory of Holland, inasmuch as the French minister offered to give us a satisfactory pledge upon that point. I may merely add that the Dutch Government abstained from making any demand upon England to sustain its claim to the exclusive navigation of the Scheldt, and wisely so:—for it probably foresaw what happened in the war which followed, when the French having taken possession of Holland, where they were welcomed by a large part of the population as friends, and having turned the Dutch fleet against us, in less than three years, we seized all the principal colonies of that country, and some of them (to our cost) we retain to the present day.

Whilst through this official correspondence the French Government was endeavouring to remove the causes of war, other and less formal means were resorted to for accomplishing the same end. Attached to the French embassy were several individuals, selected for their popular address, their familiarity with the English language, and their talent in conversation or as writers, who, by mixing in society,

and especially that of the Liberals, might it was hoped influence public opinion in favour of peace. Amongst these was one who played the chief diplomatic part in the great drama which was about to follow. "The mission of M. de Talleyrand to London," says M. Lamartine,* "was to endeavour to fraternise the aristocratic principle of the English constitution with the democratic principle of the French constitution, which it was believed could be effected and controlled by an upper Chamber. It was hoped to interest the statesmen of Great Britain in a revolution imitated from their own, which, after having convulsed the people, was now being moulded in the hands of an intelligent aristocracy."

Beyond the circles of the more ardent reformers, however, or the society of a few philosophical thinkers, these semi-official diplomatists made very little way. They were coldly, and sometimes even uncivilly treated; as the following incident, in which Talleyrand played a part, will shew. "One evening all the members of the embassy, with Dumont, went to Ranelagh, which was then frequented by the most respectable classes of English society. As they entered, there was a murmur of voices—'There is the French embassy!' All eyes were fixed on them with a curiosity not mixed with any expression of good-will; and presently the crowd fell back on both sides, as if the Frenchmen had the plague upon them, and left them all the pro-

* History of Girondins, vol. i. p. 197.

“menade to themselves.”* This incident occurred before the dethronement of the king in August; and the writer from whom the above is quoted in the *Pictorial History of England*, after labouring through several pages to prove that the French were the authors of the war, refutes himself with great *naïveté* by adding, “The public feeling which would have driven England into a war in spite of any ministry, shewed itself in a marked manner even before the horrors of the 10th August and the massacres of September.”

The feeling in France towards England was the very opposite of this, up to the time when the hostile sentiments of our government became known, and, even then, there was a strong disposition to separate the aristocracy from the people, and to attribute to the former all the enmity which characterized our policy towards them. Previously to the revolution, English tastes had been largely adopted in France; and indeed so great was at one time the disposition to imitate the amusements, dress, equipage, &c. of Englishmen, that it had acquired the epithet of *Anglomania*. When political reform became the engrossing thought of the nation, what so natural as that the French people should turn a favourable eye to England, whose superior aptitude for self-government, and more jealous love of personal liberty, they were ready then, as they are now, to acknowledge. Never, therefore, was the sympathy for England so strong as at the commencement of their revolution. When

* *Pictorial Hist. of England*, vol. iii. p. 276.

the Declaration of Pilnitz, and the hostile proceedings of the emigrant nobles at Coblenz in 1791, drew forth the indignant denunciations of Brissot and other orators, and induced some of them to call for war as the only means of putting an end to the clandestine correspondence which was carried on between the "conspirators without and the traitors within," no such feeling was entertained towards England; and even after the breaking out of hostilities with this country, so unpopular was the war, that the strongest reproach that one unscrupulous faction could throw upon another was in mutual accusation of having provoked it. This fact was at a subsequent period referred to by Lord Mornington,* one of Pitt's supporters, as a proof that the British Government at least did not provoke the war. "Robespierre," said he, "imputes it to Brissot; Brissot retorts it upon Robespierre; the Jacobins charge it upon the Girondists; the Girondists re-criminate upon the Jacobins; the mountain thunders it upon the valley; and the valley re-echoes it back against the mountain."

"All facts," said Sheridan, with unanswerable force, in reply, "tending to contradict the assertion which the noble Lord professed to establish by them, and making still plainer that there was no party in France which was not earnest to avoid a rupture with this country, nor any party which we may not at this moment reasonably believe to be inclined to put an end to hostilities."

* January 21, 1794.

I have said sufficient probably to satisfy you that France did not desire a collision with England; and that the pretexts put forward by Lord Grenville in his correspondence with M. Chauvelin were not sufficient grounds for the rupture. But I will now redeem my pledge, and prove to you, from the admissions of the partisans of the war, that the real motive was to put down opinions in France, or at least to prevent the spread of them in this country.

Parliament, as I before stated, was hastily summoned for the 13th December, 1792. The country stood on the verge of the most fearful calamity that could befall it. But the mass of the people, whose passions and prejudices had been roused against their old enemies the French, did not see the danger before them, and they were ready for a war. At the same time, to quote the words of Sir Walter Scott,* “the whole aristocratic party, commanding a very large majority in both Houses of Parliament, became urgent that war should be declared against France; a holy war, it said, against treason, blasphemy, and murder; and a necessary war, in order to break off all connection betwixt the French Government and the discontented part of our own subjects, who could not otherwise be prevented from the most close, constant, and dangerous intercourse with them.” To add to the excitement, tales of plots and conspiracies were circulated; additional fortifications were ordered for the Tower of London; and a large armed force was drawn round the metro-

* Life of Napoleon, ch. xv.

polis. Speaking of the efforts that were made to create a panic in the public mind, Lord Lauderdale* at a later period observed:—"But is there a man in England ignorant that the most wicked arts have been practised to irritate and mislead the multitude? Have not hand-bills, wretched songs, infamous pamphlets, false and defamatory paragraphs in newspapers been circulated with the greatest assiduity, all tending to rouse the indignation of this country against France, with whom it has been long determined I fear to go to war? To such low artifices are these mercenaries reduced, that they have both the folly and audacity to proclaim that the New River water has been poisoned with arsenic by French emissaries."

It must not be forgotten that at the very moment when all this preparation was being made against an attack from the French, and when this panic in the public mind was thus artfully created, M. Chauvelin was besieging the Foreign Office with proposals for peace, and, when denied admittance at the front door, entering meekly at the back, asking only to know on what terms, however humiliating, war with England might be averted. The public knew nothing of this at the time, for diplomacy was then, as now, a secret art; *but the government knew it.*

The King's speech, at the opening of the session, began by saying, that having judged it necessary to embody a part of the militia, he had, according to law, called Parliament together. He then alluded

* February 12, 1793.

to seditious practices and a spirit of tumult and disorder, "shewing itself in acts of riot and insurrection, which required the interposition of a military force." Then followed an allusion to "our happy constitution," which seems a little misplaced in the midst of riot and insurrection; but the King relied on the firm determination of Parliament "to defend "and maintain that constitution which has so long "protected the liberties, and promoted the happiness "of every class of my subjects." Next, there was a complaint against France for "exciting disturbances in foreign countries, disregarding the rights of neutral nations, and pursuing views of conquest and aggrandizement." The speech then announced an augmentation of the naval and military force, as "necessary "in the present state of affairs, and best calculated, "both to maintain internal tranquillity, and to render "a firm and temperate conduct effectual for preserving the blessings of peace."

The address, in reply to the speech, was carried without a division. The members who were opposed to the war, spoke under the discouraging consciousness that so far from having that popular support and sympathy which could alone make their opposition formidable, the advocates of peace were in as small a minority in the country as in Parliament. On the first night of the session, after denouncing the panic which had been artfully created, Mr. Fox said, "I am not so ignorant of the present state of "men's minds, and of the ferment artfully created, "as not to know that I am now advancing an opinion "likely to be unpopular. It is not the first time I

“have incurred the same hazard.” And, on a subsequent occasion, in a still more dejected tone, he said,*—“I have done my duty in submitting my ideas to the House; and in doing this, I cannot possibly have had any other motives than those of public duty. What were my motives? Not to court the favour of ministers, or those by whom ministers are supposed to be favoured; not to gratify my friends, as the debates in this House have shewn; not to court popularity, for the general conversation, both within and without these walls, has shewn that to gain popularity I must have held the opposite course. The people may treat my house as they have done that of Dr. Priestley—as it is said they have done more recently that of Mr. Walker.† My motive only was that they might know what was the real cause of the war into which they are likely to be plunged; and that they might know that it depended on a mere matter of form and ceremony.”

It is impossible to read the speeches of Fox, at this time, without feeling one's heart yearn with admiration and gratitude for the bold and resolute manner in which he opposed the war, never yielding and never repining, under the most discouraging defeats; and, although deserted by many of his friends in the

* December 15th, 1792.

† A highly respectable inhabitant of Manchester, whose house was assailed by a “Church and King” mob, upon the charge of being a “Jacobin,” or “Republican and Leveller.” His son, who inherits his liberal principles, but whose good fortune it has been to live in times when popular intelligence can discriminate between friends and foes, is an alderman and magistrate of that city.

House, taunted with having only a score of followers left, and obliged to admit* that he could not walk the streets without being insulted by hearing the charge made against him of carrying on an improper correspondence with the enemy in France, yet bearing it all with uncomplaining manliness and dignity. The annals of Parliament do not record a nobler struggle in a nobler cause.

It may naturally be asked, why, with the popular opinions running thus strongly against "French principles," did the government resort to such arts as have been described, for creating a still greater panic in men's minds, or where was the motive for going to war with the French Republic? But "the wicked fleeth when no man pursueth." The vaunted "Constitution" of that time was, so far as the House of Commons was concerned, an insult to reason, an impudent fraud, which would not bear discussion; and the "boroughmongers," as they were afterwards called, were trembling lest its real character might be exposed, if people were left at leisure to examine it. What that character was, we have been, with infinite *naïveté*, informed by one of its admirers. "The Government of Great Britain," says Alison,† "which was supposed, by theoretical observers, to have been anterior to the great change of 1832, a mixed constitution, in which the Crown, the Nobles, and the Commons mutually checked and counteracted each other, was in reality an aristocracy, having a sovereign for the executive, disguised under the popular forms of a republic." Although this government

* February 7th, 1793.

† Vol. iii. p. 101.

of false pretences had two extremes of society, the interested few and the ignorant many on its side, yet there was a small party of parliamentary reformers, who, though stigmatized as “Jacobins,” “Levellers,” and “Republicans,” were active, earnest, and able men, comprising in their body nearly all the intellect of the age; and it was from the chimerical fear that these men would put themselves under the influence of French politicians that the two countries were to be rent asunder by war. Upon this point we have the ingenious avowal of a young statesman, who lived to fill the highest office in the state. Mr. Jenkinson,* (afterwards Lord Liverpool), said,—“He had heard “it frequently urged that this was a period particu-
“larly unfavourable to a war with France, on account
“of the number of discontented persons amongst us
“in correspondence with the seditious of that country,
“who menaced and endangered our government and
“constitution. That there was a small party enter-
“taining such designs he had very little doubt; and,
“from their great activity, he also considered them
“as dangerous; but he confessed that this very cir-
“cumstance, so far from deterring him from war,
“became a kind of inducement. They might be
“troublesome in times of peace—they might be tran-
“quil in time of war; for as soon as hostilities were
“commenced, the correspondence with the French
“must cease, and all the resource they had would be
“to emigrate to that country, which would be a good
“thing for this; or, remaining where they are, to con-
“duct themselves like good citizens, as that correspon-

* December 15th, 1792.

“dence which by law was not punishable now, would
“in time of war be treason.”

The same motive for the war was at last avowed by him who had performed the part of Peter the Hermit, in rousing the warlike spirit of the nation. Edmund Burke, who from the year 1789, was possessed by a species of monomania upon the French revolution, took a prominent part in these discussions; indeed whatever was the subject before the House, if he rose to speak upon it, he was pretty certain to mount his favourite hobby before he resumed his seat. “Let the subject, the occasion, the
“argument be what it may,” said Mr. Francis,* “he
“has but one way of treating it. War and peace,
“the repair of a turnpike, the better government or
“nations, the direction of a canal, and the security
“of the constitution are all alike in his contemplation: the French revolution is an answer to every-
“thing; the French revolution is his everlasting
“theme, the universal remedy, the grand specific,
“the never failing panacea, the principal burden of
“his song; and with this he treats us from day
“to day; a cold, flat, insipid hash of the same dish,
“perpetually served up to us in different shapes,
“till at length with all his cookery the taste revolts,
“the palate sickens at it.”

At length, on the discussion of the Alien Bill,† Burke’s powers of reason and judgment seemed to be entirely overborne by a frenzied imagination. Drawing forth a dagger and brandishing it in the air, he cast it with great vehemence of action on

* May 7, 1793.

† Dec. 23, 1792.

the floor: "It is my object," said he, "to keep the French infection from this country; their principles from our minds, and their daggers from our hearts! I vote for this bill, because I believe it to be the means of saving my life and all our lives from the hands of assassins; I vote for it because it will break the abominable system of the modern pantheon, and prevent the introduction of French principles and French daggers. When they smile I see blood trickling down their faces; I see their insidious purposes,—I see that the object of all their cajoling is blood! I now warn my countrymen to beware of these execrable philosophers, whose only object it is to destroy everything that is good here, and to establish immorality and murder by precept and example!"

And on a subsequent occasion,* immediately after the declaration of hostilities, he declared his fixed opinion that "if we continued at peace with France, there would not be ten years of stability in the government of this country." Thus did he who first sounded the tocsin of war, and led the public mind through each successive phase of hostility, until he triumphed in the deadly struggle which had now begun, avow that the object he sought was to avert the danger with which French principles menaced the institutions of this country.

I must add one extract from a speech delivered by Mr. Windham, the leader of the Whig seceders, who became Pitt's Secretary at War. It was delivered on

* Feb. 18, 1793.

the 1st February, 1793, the day on which war was declared by France, but before that event was known here. "*He agreed that in all probability the French had no wish at this moment to go to war with this country, as they were not yet ready to do so; their object seemed to be to take all Europe in detail, and we might be reserved to be the last.*" Here the whole case as against ourselves is fully admitted by one of the most determined advocates of the war. It is needless to add, that if we were justified in going to war because *we predicted* that France would attack us at some future time, there never need be a want of justification for a war.

But it is at a somewhat later period that we discover more clearly the real motives of the war as acknowledged by its authors. In 1795, when hostilities had been carried on for two years, with but little impression upon the enemy, and when the cry for peace became general, there was less reserve in avowing the objects for which we had entered upon war. In a speech in favour of peace, Mr. Wilberforce* said: "With regard to the probable consequences of pursuing the war, he considered them to be in their nature uncertain. *Heretofore it might justly be said to be carried on in order to prevent the progress of French principles; but now there was much more danger of their being strengthened by a general discontent, arising from a continuance of the war, than from any importation of the principles themselves from France.*"

On a subsequent occasion, after the government

* May 27, 1795.

of France had undergone a change, and had passed into the hands of the Directory, and when the British ministry was constrained by the general discontent, to make a profession of willingness to negotiate for peace, they were obliged, in order to justify themselves for having formerly advocated war, to point to the altered, and as they alleged more settled state of the French Government, as the cause of the change in their policy. Mr. Pitt* said—"I certainly said
 " that the war was not like others, occasioned by
 " particular insult, or the unjust seizure of territory,
 " or the like, *or undertaken to repel usurpation, con-*
 " *nected with principles calculated to subvert all go-*
 " *vernment*, and which while they flourished in their
 " original force and malignity, were totally incom-
 " patible with the accustomed relations of peace and
 " amity. We professed also that many persons in
 " that country felt the pressure of the calamities
 " under which it laboured, and were ready to co-
 " operate for the destruction of the causes which
 " occasioned them."

In the debate in the House of Lords, which followed this pacific message from the King, a more undisguised statement was made by one who, as a cabinet minister, had the fullest opportunity of knowing the motives of those who entered upon the war. Earl Fitzwilliam† said:—"The present war was of
 " a nature different from all common wars. It was
 " commenced, not from any of the ordinary motives
 " of policy and ambition. *It was expressly under-*
 " *taken to restore order in France, and to effect the*

* Dec. 9, 1795.

† December 14, 1795.

“ destruction of the abominable system that prevailed in that country. Upon this understanding it was that he had separated from some of those with whom he had long acted in politics, and with other noble friends had lent aid to his Majesty’s ministers. Upon this understanding he had filled that situation which he some time since held in the Cabinet. Knowing then on such authority the object of the war to have been to restore order in France, he was somewhat surprised at the declaration in the message that his Majesty was now prepared to treat for peace.”

The Fitzwilliams have always had the habit of plain-speaking, though not of invariably foreseeing all the logical consequences of what they say. Their honesty has, however, been proverbial; and as in this case the speaker went to the unusual length of giving evidence as a cabinet minister against his former colleagues, and was not contradicted, we may take his statement as conclusive proof upon the question in hand. But what must we think of the conduct of the government, and especially of Mr. Pitt and Lord Grenville, in having thrown the responsibility of the war upon France upon such pretences as the opening of the navigation of the Scheldt, whilst at the same time we have overwhelming evidence to shew that they were determined to provoke a collision for totally different objects? What will be said of it when our history is written by some future Niebuhr? I could multiply quotations of a similar tendency to the above, but I forbear from a conviction that no further evidence is required to prove my case.

But there is one *act* of our government, illustrative of its motives in entering upon the war, which I must not omit to mention. Shortly after the commencement of hostilities (November 1793) our naval forces took possession of Toulon, when Admiral Hood and the British Commissioners published a proclamation, in the name of the King of England, to the people of France, in which they declared in favour of monarchy in France in the person of Louis XVII. But not a word did they say about the opening of the navigation of the Scheldt, or the pretended objects of the war. And about the same time* the King of England published a declaration to the French nation, in which he promises the "suspension of hostilities, "and friendship, security and protection to all those "who by declaring for monarchical government "shall shake off the yoke of a sanguinary anarchy." It is strange that our government did not see that this was as much an act of intervention in the internal concerns of another people as any thing which had been done by the French Convention, and that, in fact, it was affording a justification for every act of the kind perpetrated on the Continent, from the Declaration of Pilnitz to the present moment.

In drawing this argument to a close, I have done nothing but prove the truth of a statement made by a writer who has devoted far more time, labour, and learning to the investigation of the subject than it is in my power to bestow. Considering that he is a partisan of the war, and an admirer of the political system which it was designed to uphold, I cannot but

* October 29, 1793.

marvel at his candour, which I should the more admire if I were sure that he has fully appreciated the logical consequences that flow from his admissions. The following are the remarks of Sir A. Alison upon the origin of the war:—

“ In truth, the arguments urged by government
 “ were not the only motives for commencing the war.
 “ The danger they apprehended lay nearer home than
 “ the conquests of the republicans: it was not foreign
 “ subjugation so much as domestic revolution that
 “ was dreaded if a pacific intercourse were any
 “ longer maintained with France. ‘Croyez-moi,’
 “ said the Empress Catherine to Segur, in 1789,
 “ ‘une guerre seule peut changer la direction des
 “ ‘ esprits en France, les réunir, donner un but
 “ ‘ plus utile aux passions et reveiller le vrai pa-
 “ ‘ triotisme.’* *In this observation is contained the true
 “ secret, and the best vindication of the revolutionary war.*
 “ The passions were excited; democratic ambition was
 “ awakened; the desire of power under the name of
 “ reform was rapidly gaining ground among the
 “ middle ranks, and the institutions of the country
 “ were threatened with an overthrow as violent as
 “ that which had recently taken place in the French
 “ monarchy. *In these circumstances, the only mode
 “ of checking the evil was by engaging in a foreign
 “ contest, by drawing off the ardent spirits into active
 “ service, and, in lieu of the modern desire for inno-*

* Believe me, a war alone can change the direction of men’s minds in France, re-unite them, give a more useful aim to the passions, and awaken true patriotism.

“ vation, rousing the ancient gallantry of the British nation.”*

Of the moral sense which could permit an approval of the sentiments of the imperial patroness of Suwarrow, I would rather not speak. But I wish that a copy of this extract could be possessed by every man in England, that all might understand the “ true secret ” of despots, which is to employ one nation in cutting the throats of another, so that neither may have time to reform the abuses in their own domestic government. I would say on the contrary, the true secret of the people is to remain at peace : and not only so, but to be on their guard against false alarms about the intended aggressions of their neighbours, which when too credulously believed, give to government all the political advantages of a war, without its risks ; for they keep men’s minds in a degrading state of fear and dependence, and afford the excuse for continually increasing government expenditure.

One word only upon the objection that the French were the first to *declare* war. In the present case, as in that of the Allied Powers on the continent, to which we before alluded, we were giving to ourselves all the advantages of a belligerent power by our warlike preparations, without affording to the French the fair warning of a declaration of war. The government of France acted more in accordance with the recognized law of nations in publishing the reasons why they were, contrary to their own wishes, at war with England. The language and acts of Mr. Pitt

* Vol. iv. p. 7.

were a virtual declaration of war. Half as much said or done by a prime minister now would be enough to plunge all Europe in flames. We have seen that the militia was embodied, and the Parliament suddenly assembled on the 13th December, 1792, when the King's speech recommended an augmentation of the army and navy. On the 28th January, 1793, upon the arrival of the news of the execution of the French king, not only was M. Chauvelin, the French minister, ordered to leave the kingdom in eight days, but the King's message, which was sent to the House of Commons announcing this fact, recommended a further augmentation of the land and sea forces. This increased armament was not now wanted, as was professed to be the case on the 13th December, for "preserving the blessings of peace," but, to quote the words of the Message, "to enable his Majesty "to take the most effectual measures, in the present "important conjuncture, for maintaining the security "and rights of his own dominions; *for supporting* "his allies; and for opposing views of aggrandizement and ambition on the part of France, which "would be at all times dangerous to the general "interests of Europe, but are peculiarly so, when "connected with the propagation of principles which "lead to the violation of the most sacred duties, and "are utterly subversive of the peace and order of all "civil society." Once more I must beg your attention to dates. This message was delivered on the 28th January, 1793. Up to this time the French Government had given undeniable proofs of desiring to preserve peace with England. And it was not till after

the delivery of this message to Parliament, after a peremptory order had been given to their ambassador to leave England ; after all these preparations for war ; and after the insulting speeches and menaces uttered by Mr. Pitt and the other ministers in Parliament, which, as will be seen by referring to the debates of this time, were of themselves sufficient to provoke hostilities, that the French Convention, by a unanimous vote, declared war against England on the 1st February, 1793.

On the 11th February, the King sent a message to Parliament, in which he said he “relied with confidence on the firm and effectual support of the House of Commons, and on the zealous exertions of a brave and loyal people in prosecuting a [when was war ever acknowledged to be otherwise?] *just and necessary war.*”

The wisdom of the advice of the Czarina Catherine was exemplified in what followed. The war diverted men’s minds from every domestic grievance. Hatred to the French was the one passion henceforth cultivated. All political ameliorations were postponed ; Reform of Parliament, a question which had previously been so ripe that Pitt himself, in company with Major Cartwright, attended public meetings in its favour, was put aside for forty years ; and even the voice of Wilberforce, pleading for the slave, was for several successive sessions mute, amidst the death struggle which absorbed all the passions and sympathies of mankind.

And now, my dear Sir, if you have done me the honour to read this long letter, I will conclude with

an appeal for your candid judgment upon the merits of the question between us. Recollect that we are not discussing the professional claims of the Duke of Wellington to our admiration. He and his great opponent were brought forth and educated by the war of the Revolution. They were the accidents, not the cause of that mighty struggle. The question is—was that war in its origin just and necessary on our part? Was it so strictly a defensive war that we are warranted in saying that God raised up the Duke as an instrument for our protection? I humbly submit that the facts of the case are in direct opposition to this view; and that it is only by pleading ignorance of the historical details which I have narrated that we can hope to be acquitted of impiety in attributing to an all-wise and just Providence an active interposition in favour of a war so evidently unprovoked and aggressive.

And I remain faithfully yours,

RICHARD COBDEN.

To the Rev. — — —.

LETTER III.

MR. COBDEN TO THE REVEREND — —.

January, 1853

MY DEAR SIR,

I AM afraid you do not overstate the case in saying, that not one in a thousand of the population of this country has ever doubted the justice and necessity of our last war with France. There is all but a unanimous sentiment upon the subject; and it is easily accounted for. The present generation of adults have been educated under circumstances which forbade an impartial judgment upon the origin of the war. They were either born during the strife of arms, when men's hopes and fears were too much involved in the issue of the struggle to find leisure for a historical inquiry into the merits of the quarrel, or after the conclusion of the peace, when people were glad to forget every thing connected with the war, excepting our victories, and the victors. There are no men now living, and still engaged in the active business of life, who were old enough to form an opinion upon the question, and to take a part in the controversy, when peace or war trembled in the balance in 1792: and our histories have been written too much in the interest of the political party which was at that time

in power to enable our youth to grow up with sound opinions upon the conduct of the authors of the war.

But the truth must be told to the people of this country. I have no fear that they will refuse to hear it. Even were they so disposed, it would not affect the final verdict of mankind upon the question. The facts which I have narrated, together with many more leading to the same conclusion, to say nothing of the reserve of proofs which Time has yet to disclose, will all be as accessible to the German and American historians as ourselves. Mr. Bancroft is approaching the epoch to which we refer, and can any one who has followed him thus far in his great historical work, and observed his acute appreciation of the workings of our aristocratic system, doubt, that, should he bring his industry and penetration to the task, he will succeed in laying bare to the light of day the motives which impelled our government to join the crusade against the revolution of 1789?

But the whole truth must be told, and the public mind thoroughly imbued with the real merits of the case, not as the solution of a mere historical problem, but in the interest of peace, and as the best and, indeed, only means of preparing the way for that tone of confidence and kindness which every body, excepting a few hopelessly depraved spirits, believes will one day characterize the intercourse of France and England. For if in science and morals a truth once established be fruitful in other truths, and error, when undetected, be certain to multiply itself after

its own kind, how surely must the same principle apply to the case before us !

If England be under the erroneous impression that the sanguinary feud of twenty-two years, which cost her so many children, and heaped upon her such a load of debt and taxation, was forced upon her by the unprovoked aggression of France, it is, I fear, but too natural that she should not only cherish feelings of enmity and resentment against the author of such calamities, but that there should be always smouldering in her breast dark suspicions that a similar injury may again be inflicted upon her by a power which has displayed so great a disregard of the obligations of justice. The natural result of this state of feeling is that it leads us to remind the offending party pretty frequently of the disastrous results of their former attacks, to thrust before their eyes memorials of our prowess, and to warn them from time to time that we are preparing to repel any fresh aggressions which they may be meditating against us.

If, on the other hand, the real origin of the war be impressed upon the mind of the present generation, and it be known, *popularly known*, that far from having been, as we are told it was, undertaken in behalf of liberty, or for the defence of our own shores, it was hatched upon the Continent in the secret counsels of despotic courts, and fed from the industry of England by her then oligarchical government; that its object was to deprive the French people of the right of self-government, and to place their liberties at the disposal of an arbitrary king,

a corrupt church, and a depraved aristocracy; then the opinion of the country, and its language and acts will be totally different from what we have just described. Instead of feelings of resentment, there will be sentiments of regret; far from suspecting attacks from the French, the people of England, seeing through, and separating themselves from the policy by which their fathers were misled, will be rather disposed to level their suspicion at those who call upon them again, without one fact to warrant it, to put themselves in an attitude of defiance against their unoffending neighbour; and in lieu of constantly invoking the memory of their own exploits, or the reverses of their opponents, the English people will, under the circumstances which I have supposed, be anxious only for an oblivion of all memorials of an unjust and aggressive war.

Can any doubt exist as to which of these conditions of public opinion and feeling is most likely to conduce to peace, and which to war?

But, moreover, the truth must be known in order that the people of England may be the better able to appreciate the feelings of the French towards them. The precept 'do unto others as ye would that others should do unto you,' is applicable to thought as well as act. Before we condemn the sentiments entertained by the people of France with respect to our conduct in the last war, let us endeavour to form an opinion as to what our own feelings would be under similar circumstances. To do this we must bear in mind that whilst our historians give us a flattering and partial account of the conduct of our government at the

breaking out of the last war, the French writers, as may naturally be supposed, lose no opportunity of recording every fact which redounds to our disadvantage. I have abstained from giving quotations from these authorities, because they would be open to the charge of being partial and prejudiced. But it ought to be known to us that not only do these writers make the European powers who conspired against the liberties of France responsible for the war, they invariably assign to England the task of stimulating the flagging zeal of the Continental despots, and of bribing them to continue their warlike operations when all other inducements failed. The least hostile of these writers, M. Thiers, the favourite of our aristocracy, in speaking of our preparations for the campaign of 1794, says—"England was still the soul of the coalition, and urged the powers of the continent to hasten to destroy, on the banks of the Seine, a revolution at which she was terrified, and a rival which was detestable to her. The implacable son of Chatham had this year made prodigious efforts for the destruction of France." It is to the energies of Pitt, wielding the power of England, that France attributes the tremendous coalitions which again and again brought nearly all Europe in hostile array against her. Thus does M. Thiers describe the spirit which animated him. "In England a revolution which had only half regenerated the social state, had left subsisting a crowd of feudal institutions which were objects of attachment for the court and aristocracy, and of attack for the opposition. Pitt had a double object in view; first to allay the

hostility of the aristocracy, to parry the demand for reform, and thus to preserve his ministry by controlling both parties; secondly—to overwhelm France beneath her own misfortunes, and the hatred of all the European governments.”

These quotations afford but a faint idea of the tone in which the historical writers of that country deal with the subject. We are held up generally to popular odium as the perfidious and machiavelian plotters against the liberties of the French people.

But it will probably be asked—and the question is important—what are the *present* opinions of Frenchmen respecting their own Revolution out of which the war sprung? There is nothing upon which we entertain more erroneous views. When *we* speak of that event, our recollection calls up those occurrences only, such as the Reign of Terror, the rise and fall of Napoleon, the wars of conquest carried on by him, and the final collapse of the territory of France within its former boundaries, which seem to stamp with failure, if not with disgrace, the entire character of the Revolution. The Frenchman, on the contrary, directs his thoughts steadily to the year 1789. He finds the best excuse he can for the madness of 1794; he will point, with pride, to the generous magnanimity of the populace of Paris, in 1830 and 1848, as an atonement for the Reign of Terror; he throws upon foreign powers, and especially upon England, the responsibility for the long wars which desolated so many of the countries of Europe; but towards the Constituent Assembly of 1789, and the

principles which they established, his feelings of reverence and gratitude are stronger than ever; he never alludes to them but with enthusiasm and admiration. This feeling is confined to no class, as the following extract from a speech addressed by M. Thiers on the 29th June, 1851, to that most Conservative body, the National Assembly, and the response which it elicited, will show. It is taken verbatim from a report published by himself:—

“*M. Thiers.* Let us do honour to the men who have maintained in France, since 1789, real civil equality—equality of taxation, which we owe to our admirable and noble Revolution. (*Notre belle et honorable revolution.*’)—(*Assent and agitation.*)

“*A voice on the left.* Settle that with your friends. (*Oh, oh! murmurs.*)!

“*A voice on the right.* Don’t mistake; it is not the Revolution of 1848 that is referred to.

“*M. Thiers.* I speak of the Revolution of 1789, and I trust we are all of one mind upon that. (*The left. Yes! yes! laughter.*)

“*M. Charras.* Talk to the right.

“*M. Thiers.* I have a better opinion than you of my country, and of all our parties, and I am convinced that no one will encounter coldness or disapprobation from any quarter when praising the Revolution of 1789. (*Marks of approbation from a great number of benches.*’)

There is no greater proof of the predominant favour in which any opinions are held in France than to find them advocated by M. Thiers. But whilst employed upon this letter, a recent production from the

pen of my accomplished friend, M. Michael Chevalier, has met my eye, in which he speaks of "the immortal principles" of "our glorious Constituent Assembly of 1789." Where two men of such eminent authority, but of such diametrically opposite views upon economical principles, agree in their admiration of a particular policy, it is a proof that it must have irresistible claims upon public approbation. Men of the highest social position in France — even they whose fathers fell a sacrifice to the Reign of Terror, admit that to the measures of 1789 (they were in substance described in my last letter), which have elevated the millions of their countrymen, from a condition hardly superior to that of the Russian serf, to the rank of citizens and proprietors of the soil, France is indebted for a more rapid advance in civilization, wealth, and happiness, than was ever previously made by any community of a similar extent, within the same period of time.

This feeling, so universally shared, has not been impaired by the recent changes in France, for it is directed less towards *forms* of government, or political institutions, than to the constitution of society itself. And here let me observe again upon the erroneous notions we fall into, as to the state of public opinion in France, because we insist upon judging it by our own standard. Assuredly, if the French have the presumption to measure our habits and feelings by theirs, they must commit as great blunders. *Our* glory is that the franchises and charters gained by our forefathers have secured us an amount of *personal freedom* that is not to be surpassed under any form

of government. And it is the jealous patriotic unselfish love of this freedom, impelling the whole community to rush to the legal rescue of the meanest pauper if his chartered personal liberties be infringed by those in power, that distinguishes us from all European countries; and I would rather part with every sentiment of liberty we possess than this, because, with it, every other right is attainable.

But the French people care little for a charter of *habeas corpus*, else, during their many revolutions, when power has descended into the streets, why has it not been secured? and the liberty of the press, and the right of association, and public meeting, have been violated by universal suffrage almost as much as by their emperors and kings. That which the French really prize, and the English trouble themselves little about, is the absence of privileged inequality in their social system. Any violation of this principle is resisted with all the jealousy which we display in matters of individual freedom. It was this spirit which baffled the design of Napoleon, and Louis the XVIIIth, to found an aristocracy by the creation of entails. Now the Revolution of 1789, besides securing liberty of worship, and establishing probably the fairest system of government taxation (apart from the protective policy of the nation) at present to be found in the world, has divided the rich land of France amongst its whole population. It is these measures, coupled with the abolition of hereditary rank, and of the law of entail, which have chiefly contributed to gain for the Constituent Assembly the gratitude of a people so jealous of privilege, and so

passionately attached to the soil. Yet it cannot be too strongly impressed upon our minds that it was against the principles of this very Assembly that Burke, in 1790, launched his fiery declamation, in which we find the following amongst many similar invectives:—" You would not have chosen to consider the French as a people of yesterday, as a nation of low-born servile wretches, until the emancipating year 1789;" and we are equally bound to remember that it was with the intention of overthrowing the system of government established by that Assembly that the despotic powers marshalled their armies for the invasion of France, and when, upon the failure of the attack, we threw the weight of England into the scale of despotism. Having fully realized to ourselves the case of the French people, let us ask—what would be our feelings under their circumstances?

Why, I fear, in the first place, we should, like them, still remember with some bitterness the unprovoked attack made upon us by the nations of Europe, and that we should be sometimes tempted to call that country in particular "perfidious," which, whilst professing to be free itself, and to have derived its freedom from a revolution, yet joined the despots of the Continent in a coalition against the liberties of another people: we, who have just paid almost pagan honours to the remains of a general who fought the battles of that unrighteous coalition—what would we have done in honour of those soldiers who beat back from our frontiers confederate armies of literally every nation in Christian Europe, except

Sweden, Denmark, and Switzerland? Should we not, if we were Frenchmen, be greater worshippers of the name of Napoleon, if possible, than we are of Wellington and Nelson—and with greater reason? Should we not forgive him his ambition, his selfishness, his despotic rule? would not every fault be forgotten in the recollection that he humbled Prussia, who had without provocation assailed us when in the throes of a domestic revolution, and that he dictated terms at Vienna to Austria, who had actually begun the dismemberment* of our own territory? Should not we in all probability still feel so much under the influence of former dangers and disasters as to cling for protection to a large standing army?—and might not that centralized government which alone enabled us to preserve our independence still find favour in our sight? and should we not indulge a feeling of proud defiance in electing for the chief of the state the next heir to that great military hero, the child and champion of the Revolution, whose family had been especially proscribed by the coalesced Powers before whom he finally fell? Yes, however wise men might moralize, and good men mourn, these would, under the circumstances, I am sure, be the feelings and passions of Englishmen, aye, and probably, in even a stronger degree than they are now cherished in France.

What, then, are the results which I anticipate from the general diffusion of a true knowledge of the origin and character of the last French war? In the first place, a more friendly and tolerant feeling

* At Valenciennes and Condé.

towards the French people. The maxim of Rochefoucault, that we never forgive those we have injured, if it be not unjust as applied to individuals, does not certainly hold good with respect to communities. Great nations may be proud, and even vain, but they are ever magnanimous; and it is only meanness which could lead us to visit upon our victim the penalty of our own injustice. Besides, the maxim is not intended to apply, even in individuals, to generous natures, and generosity is the invariable attribute of great masses of men.

But, in the next place, I should expect from a more correct knowledge of our error of sixty years ago, that we shall be less likely to repeat it now. It is certain that the lesson will not be required? Are there no symptoms that we have spirits amongst us who want not the will, if the power and occasion be afforded, to play the part of Burke in our day? He excited the indignation of his countrymen against a republic which had decapitated a King; now our sympathies are roused in behalf of a Republic which has been strangled by an Emperor. However inconsistent, in other respects, our conduct at the two epochs may be, we seem in both cases likely to fall into the error of forgetting that the French nation are the legitimate tribunal for disposing of the grievance. To forget this is indeed a more flagrant act of intervention on our part than was that of our forefathers, inasmuch as, whilst they usurped the functions of twenty-four millions of Frenchmen, we are now in danger of treating thirty-six millions with no greater consideration.

I have said that we are not without imitators of the *Reflections*. A small volume of "*Letters of 'an Englishman,' on Louis Napoleon, the Empire, and the Coup d'Etat, reprinted with large additions from The Times,*" is lying before me. I know a cynical person who stoutly maintains the theory that we are not progressive creatures; that, on the contrary, we move in a circle of instincts; and that a given cycle of years brings us back again to the follies and errors from which we thought mankind had emancipated itself. And really, these *Letters* are calculated to encourage him in his cynicism. For here we have the very same invectives levelled at Louis Napoleon which were hurled at the Constituent Assembly sixty years ago—the style, the language, the very epithets are identically the same. Take a couple of morsels by way of illustration—the one speaking of the Constituent Assembly of 1789; and the other of Louis Napoleon in 1852:—

BURKE, 1790.

"How came the Assembly by their present power over the army? Chiefly, to be sure, by debauching the soldiers from their officers."

ENGLISHMAN, 1852.

"The banquets to the sub-officers, the champagne, the toasts, and the reviews, disclosed a continuity of purpose, and a determination to debauch the soldiery, calculated to open the eyes of all."

So much for a specimen of specific accusation.

Nor for a sample of general invective:—

BURKE, 1790.

Speaking of the Constituent Assembly.

"When all the frauds, impos-

ENGLISHMAN, 1852.

Speaking of Louis Napoleon.

"A self-convicted perjurer, an

tures, violences, rapines, burnings, murders, confiscations, compulsory paper currencies, and every description of tyranny and cruelty employed to bring about and uphold this Revolution, have their natural effect, that is, to shock the moral sentiments of all virtuous sober minds, the abettors of this philosophic system immediately strain their throats in a declamation against the old monarchical government of France."

attainted traitor, a conspirator successful by the foulest treachery, the purchase of the soldiery, and the butchery of thousands, he must, if not cut short in his career, go all length of tyranny. For him there is no halt, for his system no element of either stability or progress. It is a hopeless and absolute anachronism."

Considering that the result of Burke's declamation was a war of twenty-two years, first to put down the French Republic, and afterwards Napoleon Bonaparte, both in the interest of the Bourbons; that the war cost us some five-hundred millions of debt; and that the result is, this present year 1853, a Bonaparte, whose family we proscribed, sitting upon the French throne, and the Bourbons, whom we installed at the Tuilleries, fugitives from the soil of France—remembering these things, and beholding this not altogether unsuccessful attempt at an imitation of the "Reflections," it does certainly afford a triumph to my cynical acquaintance, so far at least as to raise a doubt whether progressive wisdom be an element of our foreign policy. I could give many specimens of declamatory writing from the *Letters*, not inferior to Burke in style, and some of them surpassing him in the vigour of their invective. Take the following as an illustration of the lengths to which the writer's vehemence carries him, and let it be borne in mind that these

letters have had a far wider circulation than Burke's great philippic with all its popularity could boast of; I invite attention to those passages marked by me in italics. "The presidential chair or the imperial throne is set upon a crater—the soil is volcanic, undermined and trembling—the steps are slippery with blood—and the darkening steam of smouldering hatred, conspiracy and vengeance—is exhaling round it. Each party can furnish its contingents for tyrannicide; the assassin dogs him in the street; and even at the balls or banquets of the *Elysée* he may find the fate of *Gustavus*. He who has been false to all must only look for falsehood, and is doomed to daily and to nightly fears of mutinies, insurrections, and revenge. Conscience cannot be altogether stifled, and will sometimes obtrude, in her horrible phantasmagoria, the ghastly corpses of the Boulevards."

Nobody will suppose that I would deny to any one the right of publishing his views upon French or any other politics. So far am I from wishing to restrain the liberty of the press, it is my constant complaint that it is not free enough. The press, in my opinion, should be the only censor of the press; and in this spirit I would appeal to public opinion, against the evil tendency of these and similar productions. We all know how the strictures of Burke began with criticism, grew into menace, and ended in a cry for war. The "Englishman's" *Letters* are here again an exact counterpart of their great original. The volume contains ten letters; the two first, penned in a style of which I have given specimens, are furious attacks upon Louis Napoleon and his government;

with passing condemnations of the majority of the Legislative Assembly, the Orleanists, the bourgeoisie, the peasantry, the soldiers, and the priests; in fact there is hardly any party in France which escapes his vituperation. Next comes letter the third, headed, most appropriately, after all this provoking abuse, "*The National Defences*;" which subject he discusses with his telling style, and, upon the whole, with great good sense. Having thus provided against accidents, and ascertained that he was ensconced in something stronger than a "glass house," he resumes his vocation of pelting with the hardest and sharpest words he can find, in his copious vocabulary of invective, Louis Napoleon in particular, and all sorts of men in general, at home and abroad. After indulging himself in this way through four more letters, we come to the eighth, which bears the title—somewhat out of place in such company—of "*Peace at all price*." It would seem that Mr. Burritt, and Mr. Fry, having taken alarm at the hostile tone of the English press, had set on foot a scheme for counteracting the mischief. Addresses, containing assurances of friendship and peace, were drawn up in several of our towns, signed by the inhabitants, and forwarded to various places in France. This movement, than which nothing could be more amiable, and certainly nothing more harmless, draws down upon the heads of poor Messrs. Burritt, and Fry, and the Peace party generally, such a volley of vituperative epithets, that they might almost excite the jealousy of M. Bonaparte himself. Speaking of the peace advocates—"they require," says he, "keepers, not reporters - their

place is Hanwell, not the London Tavern—and their Chairman should be Doctor Conolly !”

Now, in the course pursued by the “Englishman,” we have an epitome of the conduct of all such writers; —they begin with denunciations of the French Government; they then call for more “defences” as a protection against the hostility which they instinctively feel such language naturally excites; and they end in onslaught upon the advocates of peace because they do not join in the cry.

Before indulging this expensive propensity for scolding, this determination to grumble not only for ourselves but also for thirty-six millions of Frenchmen, it behoves us to ask, not only whether any benefit will arise, but whether positive injury may not be done, even to the people we wish to serve, by our uncalled for interference. It is hardly necessary that I should declare, that, were Louis Napoleon an Englishman, or I a Frenchman, however small a minority of opponents he might have, I should be one of them;—that is all I have to say in the matter; for anything more would in my opinion be mere impertinence towards the French people, who, for reasons best known to themselves, acquiesce in his rule. But admitting for the sake of argument that all that is said of the tyranny, treachery, and wickedness of Louis Napoleon be true; those are precisely the qualities in despotic monarchs, to which we are indebted for our liberties. Why should not the French be allowed the opportunity of deriving some of the advantages which we have gained from bad sovereigns? Where would our charters and franchises

have been, if our Johns and Jameses had not reigned, and misgoverned? Nobody pretends that the French emperor is quite so bad as our eighth Henry; yet we contrived to owe to him our Protestantism. If half that is alleged against Louis Napoleon be true, the French people will have him at a great disadvantage in any controversy or struggle they may be engaged in with him. One thing alone could prevent this—the popularity which will assuredly follow from continued attacks in the English press, such as I have just quoted.

But here let me warn you against the belief into which so many fall, that the hostile tone adopted by writers of this country towards the French Government, and the cry of an invasion, have reference to the present despotic ruler of France only. *That* is one of the many shapes which the cry has assumed. But it was first heard when Louis Philippe, the “Napoleon of Peace,” was on the throne. The letter of the Duke of Wellington to Sir John Burgoyne, which has been made the text-book for panic-mongers ever since, was written when the King of the French had given seventeen years proof of his pacific policy, and when that representative form of government, *which we are now told was the guarantee of peace*, was still subsisting in France: it made its appearance in 1847, when we were already spending more upon our warlike armaments than in any of the previous thirty years; more by two millions of money than the most terrified invasionist *now* proposes to expend: and yet at that time, and under those circumstances, the cry for more defence against the French was as

active, and the clamour against the peace party who resisted it, as strong, as at any later time ; and the very same parties who now advocate increased armaments to protect our shores against Louis Napoleon, were amongst the loudest of those who swelled the panic cry in 1847.

An allusion to the infirmities of a great mind, however painful at the present moment, is rendered absolutely necessary by those who quote the authority of the Duke of Wellington's declining years in favour of a policy which, in my opinion, tends neither to the peace, nor the prosperity of the country. At the time of penning his letter to General Burgoyne, the Duke was verging upon his eightieth year. Now, no man retains *all* his faculties unimpaired at fourscore. Nature does not suspend her laws, even in behalf of her favourite sons. The Duke was mortal, and therefore subject to that merciful law which draws a veil over our reason, and dims the mental vision as we approach the end of that vista which terminates with the tomb. But the faculties do not all pay this debt of nature at once, or in equal proportion. Sometimes the strongest part of our nature, which may have been subjected to the greatest strain, declines the first. In the Duke's case, his nervous system, his "iron" characteristic gave way. He who at forty was incapable of fear, at eighty was subject to almost infantine alarms. This was shewn on several public occasions ; but on none so strongly as in the provision made by him against an insurrection or a revolution during the Great Exhibition of 1851, when, as is known to those who were in authority, or in connection

with that undertaking, he was haunted with terrors which led him to change the entire disposition of the army for the year, to refuse to the household regiments the usual retreat to summer quarters, and to surround the metropolis with troops. No one in the full possession of a vigorous intellect could have possibly fallen into the error of supposing that the moment, when all people's minds were wound up by a year's previous agitation to the highest pitch of interest in a holiday exhibition, would be chosen for a great and combined political demonstration. Human nature, and especially English nature, is never liable to be possessed by two such absorbing ideas at the same time. In fact, such a diversion of men's minds from public affairs as the Great Exhibition afforded is precisely that which despots have employed for escaping the scrutiny of their own misgovernment. But, as is well known, at that moment universal political contentment reigned throughout England.

If, however, as was supposed, the Duke's preparations were levelled at the foreigners who were attracted to London, the absence of a calm and vigorous reason is still more apparent. For at that time political propagandism was dead even on the Continent; their revolutions had failed; universal reaction had succeeded to democratic fever; and England was regarded as the only great country in Europe where political freedom was "holding its own." Besides, a moment's clear reflection would have suggested the obvious answer to such fears,—that the red republicans and revolutionists of the continent were not the persons likely to find the

money for paying a visit in great numbers to England. In fact, so great an obstacle did the expense present, that during the whole year scarcely fifty thousand foreigners, European and American, above the average of annual visitors, reached our shores: and it must be evident, that, against any dangers, whether of mischief, or spoliation, contemplated by foreigners, or English on that occasion, a good police force, which was most amply provided by the Commissioners, and not an army, was the only rational provision.

But I appeal from the Duke's advice in 1847, to his own example, when in complete possession of his mental powers, in 1835. He was a member of Sir Robert Peel's government in the latter year, which is memorable for having witnessed the lowest military expenditure since the peace. The estimates of that year are always quoted by financial reformers as a model of economy. The Duke was consulted by Sir Robert Peel, and became an assenting party to those estimates. What was the change of circumstances which warranted so great a revolution in his views in 1847? His letter might lead us to suppose that steam navigation had in the meantime been discovered. Does any one whose memory is unimpaired forget that in 1835 our coasts and narrow seas swarmed with steamers, that our sailing vessels were regularly towed to sea by them, and that we were then discussing the merits of the ports in Ireland from which steam-ships should start for America? The Duke never afterwards acknowledged that he neglected the defence of the country when he was in

power. Nobody has made such a charge against him. But I and others who have advocated a return to the expenditure of 1835 have been denounced for wishing to leave the country defenceless. I must leave my opponents to reconcile their conduct with the reverence they profess to feel for the authority of the Duke of Wellington.

The Duke's letter has been followed by a shoal of publications, all apparently designed to tempt the French to make a descent upon our shores; for all are, more or less, full of arguments to prove how easily it might be effected. Some of them give plans of our ports, and point out the nearest road to London; others describe, in seductive phrases, the rich booty that awaits them there. Foremost of these is Sir Francis B. Head, who has given us a thick volume under the title of "*The Defenceless State of Great Britain*;" then we have "*Thoughts on National Defence*," by Vice-Admiral Bowles; "*On the Defence of England*," by Sir C. J. Napier, who tells us that he "believes that our young soldiers pray night and day" for an invasion; "*A Plan for the Formation of a Maritime Militia*," by Captain Elliot; "*National Defences*," by Montague Gore, Esq.; "*Memorandum on the Necessity of a Secretary of State for our Defences, &c.*," by Robert Carmichael Smith; "*The Defence of our Mercantile Sea-ports*," by a Retired Artillery Officer; and amongst a host of others is "*The Peril of Portsmouth*," by James Fergusson, Esq., WITH A PLAN; commencing most portentously:—"Few persons are perhaps aware that Portsmouth, which

“ from its position and its extent, is by far the most
“ important station of the British Navy, is at present
“ in so defenceless a state, that it could easily be
“ taken by a *coup-de-main*, either from the sea or by
“ land. Yet such is the undoubted state of the case,
“ and it is further easy of proof that if it were to
“ fall into the hands of an enemy, the navy of Eng-
“ land would, from that very circumstance, be crip-
“ pled, as a defenceless element at least, to the extent
“ of one-half its power ; while the hostile occupation
“ of Portsmouth would render the invasion of Eng-
“ land as simple and as easy a problem as ever was
“ submitted to the consideration of any military man,
“ &c. &c.” Surely the French must have lost all
pretensions to their character for politeness, or they
would have long ago accepted these pressing invita-
tions to pay our shores a visit !

There are two assumptions running through nearly
all these productions. First, that we have made no
provision for our defence, and, therefore, offer a
tempting prey to an invader ; and, next, that the
French are a mere band of pirates, bound by no ties
of civilization, and ready to pounce upon any point
of our coast which is left unprotected.

The first assumption may be disposed of with a
few figures :—we expend every year from fifteen to
sixteen millions in warlike preparations ; and we
have been, ever since the Duke of Wellington’s
Estimates of 1835, constantly augmenting the number
of our armed forces. In that year they amounted
altogether to 145,846—at the close of the last Par-

liament they stood at 272,481;*† thus shewing an addition since 1835 of 126,635. The following is a detailed list of the increase from official sources:—

Amount and Description of all the Forces added since 1835.

Cavalry and Infantry added		20,666
Ordnance Corps		7,263
Sailors and Marines		12,095
Enrolled Pensioners		18,500
Dockyard Battalions (armed and drilled)		9,200
Coast Guard (organized and drilled to the use of Artillery since 1835)		5,000
Irish Constabulary, increase		4,627
Militia increase voted		54,049
		131,400
Deduct decrease of Yeomanry		4,765
Total increase since 1835 up to June, 1852		126,635

Thus stood matters at the close of the last Parliament, in June. But the cry was still “they come.” The “invasionists” renewed their annual autumn clamour; and no sooner had the new Parliament

* In addition to this, the army in India amounts to 289,529 men, making altogether 562,010 men. The cost of the Indian army is ten millions, which, added to our fifteen millions, makes £25,000,000—the largest sum paid by any nation for a peace establishment.

† [The army estimates voted for 1865-6 amounted to £14,348,447, those for the navy to £10,392,224. These estimates showed a considerable reduction on the expenditure in 1860-1, which was for the army £18,013,896, for the navy £13,331,668. Since 1859 sums of £2,000,000 and £1,200,000 have been voted for fortifications. The estimates for the Indian army for 1865-6 were £13,754,560, and for the Indian marine charges £538,200.]

assembled in November, 1852, for the short session, than there was a proposal for a further increase of our "defences." The government asked for 5,000 additional seamen; 1,500 marines; and 2,000 artillerymen. The money was voted without a division. Mr. Hume, who had seen many of the popular organs of public opinion joining in the cry, contented himself with a protest; and then, in despair of any other corrective, left the cure of the evil to the tax-gatherer:—and I confess for the moment to have shared his sentiments.

The other argument of the invasionists, — that France is ready to assail us upon any vulnerable point, will be successful in proportion only to our ignorance of the character and condition of the French people, and of the origin and history of the last war. Everything in that country is viewed by us through a distorted and prejudiced medium. We regard France as the most aggressive and warlike country on the Continent, because we have all read of her invasions of other countries, without recollecting that they were in retaliation for an unprovoked attack upon her;—we view with alarm the enthusiasm of the French people for their army, but we cannot so far enter into their feelings as to know that it springs from gratitude, because "it was the army," to use the words of the conservative and peace-loving *Journal des Débats*, "which represented her with admirable *éclat* on fields of battle—that is to say, on the spot to which it was necessary that the whole of France should repair in order to defend the new life which she held from 1789." Doubtless there

is danger to be feared from this predominance of the military spirit, however created, a danger most to be dreaded by France herself:—but let it not be forgotten that we helped to plant and water the upas tree, and have no right to charge with our sins those who are destined to live under its shade.

Besides, we must bear in mind that the strength of the army of France is only in proportion to that of other continental states; and that her navy is always regulated with reference to our own, generally about in the ratio of two-thirds of our force: “We pay England the compliment,” said M. Thiers in the Chamber of Deputies in 1846, “of thinking only of her when determining our naval force; we never heed the ships which sally forth from Trieste or Venice—we care only for those that leave Portsmouth and Plymouth.” “Oh, but,” I sometimes hear it very complacently said, “every body knows that England is only armed in self-defence, and in the interests of peace.” But when France looks at our 500 ships of war, our 180 war steamers, and hears of our great preparations at Alderney, Jersey, and other points close to her shores, she has very different suspicions. She recalls to mind our conduct in 1793, when, within a twelvemonth after the commencement of hostilities, we had taken possession of Toulon (her Portsmouth) and captured or burnt a great part of her fleet; and when we landed an expedition on the coast of Brittany, and stirred up afresh the smouldering fires of civil war. If *we* are so alarmed at the idea of a French invasion, which has not occurred for

nearly eight hundred years, may we not excuse the people of France if they are not quite free from a similar apprehension, seeing that not a century has passed since the Norman conquest in which we have not paid hostile visits to her shores? The French have a lively recollection of the terrible disasters they suffered from the implacable enmity of our government during the last war. They found themselves assailed by a feudal aristocracy, having at its command the wealth of a manufacturing and mercantile people, thus presenting the most formidable combination for warlike purposes to be found recorded in the world's history; and knowing as they do that political power in this country is still mainly in the hands of the same class, some allowance must be made for them if they have not quite made up their minds that peace and non-intervention are to be our invariable policy for the future. Taking this candid view of the case, we shall admit that the extent of the preparations in France must be in some degree commensurate with the amount of our own warlike armaments.

I will add a few remarks upon the present state of France, as compared with her condition in 1793, and endeavour to form an estimate of the probabilities of a war between her and this country; or rather, I should say, of the prospect of an invasion of England by France; for I will assume the writers and declaimers about this invasion to be in earnest; I will suppose that they really mean an invasion of England, and not a march upon Belgium, or any

other continental state; I will take for granted that we have not now, as was the case in 1792, to deal with false pretences, to cover other designs, and that, in this discussion of a French invasion, we are not witnessing a repetition of the bold dissimulation on the one side, and gross credulity on the other, which preceded the war of 1793. I will for the sake of argument admit the good faith of those who predict a war with France, and a consequent descent upon our shores: nay, I will go further, and even not call in question the sincerity of that party which foretells an invasion of England without any previous declaration of war.

What are the circumstances of Europe calculated to produce a war? There is one, and only one danger peculiar to our times, and it was foreseen by the present Prime Minister, when he thus expressed himself:

“He was disposed,” Lord Aberdeen* said, “to dissent from the maxims which had of late years received very general assent, that the best security for the continuance of peace, was to be prepared for war. That was a maxim which might have been applied to the nations of antiquity, and to society in a comparatively barbarous and uncivilised state, when warlike preparations cost but little, but it was not a maxim which ought to be applied to modern nations, when the facilities of the preparations for war were very different. Men, when they adopted such a maxim, and made large preparations in time of peace that would be sufficient in the time of war,

* Hansard, vol. 107, p. 704.

were apt to be influenced by the desire to put their efficiency to the test, that all their great preparations, and the result of their toil, and expense, might not be thrown away. He thought, therefore, that it was no security to any country against the chances of war, to incur great expense, and make great preparations for warlike purposes. A most distinguished statesman* of France had lately emphatically declared in the French Chamber his desire for peace, but he added that to maintain it he must have an army of 800,000 men. And what he (the Earl of Aberdeen) would ask, could be expected from the raising of such a force but war, or national bankruptcy? He therefore dreaded the intention of those who desired such extensive armaments, notwithstanding the pacific professions they made; and he could not be at ease as regarded the stability of peace until he saw a great reduction in the great military establishments of Europe. Such should be the great object of all governments, and more especially of the government of this country."

Thus spoke Lord Aberdeen in 1849. The evil has not diminished since that time. Europe has almost degenerated into a military barracks. It is computed by Baron Von Reden, the celebrated German statistical writer, that one half of its population in the flower of manhood are bearing arms. It is certain that in the very height of Napoleon's wars, the effective force of the Continental armies was less than at present. For a long time the cuckoo-cry was repeated "to preserve peace, prepare for war,"

* M. Thiers.

but the wisest statesmen of our age have concurred with the Peace party, that the greater the preparation the more imminent is the risk of a collision, owing to the preponderance which is thereby given in the councils of nations to those who by education, taste, and even interest must be the least earnestly disposed for peace. At this moment a martial tone pervades the Courts and Cabinets, as well as the most influential classes of the Continental States; and never, even in England, since the war, was the military spirit so much in the ascendant in the higher circles as at the present time. To what then are we to attribute the preservation of peace and the present prospect of its continuance, in spite of this dangerous element, but to the fact that, whilst governments are making unprecedented preparations for hostilities, all the signs and symptoms of the age tend more than ever in the opposite direction? Let us see what are the facts which warrant this conclusion:—

The first safeguard against the employment of these enormous standing armies in foreign wars, is that they are indispensable at home to repress the discontent caused in a great degree by the burden which their own cost imposes on the people. Sir Robert Peel foresaw this result in 1841, when he said that—“*the danger of aggression is infinitely less than the danger of those sufferings to which the present exorbitant expenditure must give rise.*” Their growing intelligence will render the people every year more dissatisfied with the yoke imposed on them; and athwart these armed and drilled

mechanical tools of despotism may be often heard low mutterings, which will assuredly swell some day into a shout of defiance. Internal revolutions may be safely predicted of every country whose government rests not upon public opinion, but the bayonets of its soldiers. Those internal convulsions are however no longer to be feared as the causes of war; for the world has wisely resolved (and it is one of the lessons learned from the last war) that henceforth every nation shall be left to regulate its own domestic affairs, free from the intervention of strangers. It is true that, whilst during the late revolutionary period, this rule was scrupulously observed towards the Great Powers, it was flagrantly outraged in the case of Hungary, Italy, and Hesse-Cassel, against which acts of injustice to the smaller States, the public opinion of the civilized world ought to be brought to bear, unless we are to sit down and acknowledge that the weak are to have no rights, and the strong to be bound by no law. In this change of policy, however, which will certainly be observed towards France, we have a security against a repetition of the offence which led to the last war.

There are not a few persons, especially of the military class, who, ever since the peace, have been haunted with the apparition of the late war, and have advocated a state of preparation calculated to meet as great efforts on the part of France as those put forth by Napoleon himself. They will even go so far as to predict the exact latitude where future Trafalgars or St. Vincents are to be fought, and call

for the construction of harbours and basins where our crippled ships may be repaired, after their imaginary engagements.* Now, without laying myself open to the charge of foretelling perpetual peace—for nothing appears more offensive to certain parties—I must say that I think the very fact of the wars of the French Revolution having happened is an argument against their soon recurring again. For even if I take no credit for the lesson which that bloody and abortive struggle affords, if I admit the unteachable character of nations, still Nature has her own way of proceeding, and she does not repeat herself every generation in extraordinary performances of any kind. Alexanders, Cæsars, Charlemagnes, and Napoleons, are happily not annual, or even centennial, productions; and, like the exhausted eruptions of our physical globe, they have never been reproduced upon the same spot. Nowhere is the husbandman more safe against a convulsion of nature than when he plants his vines in the crater of an extinct volcano. The very magnitude of the operations of Bonaparte, by forbidding all attempts at rivalry, is rather calculated to check than invite imitation. “The death of “Napoleon,” says Chateaubriand, “inaugurated an “era of peace; his wars were conducted on so mighty “a scale (it is perhaps the only good that remains of “them) that they have rendered all future superiority “in that career impossible. In closing the temple of “Janus violently after him, he left such heaps of

* Such arguments have been gravely urged in the House of Commons by naval men; and, what is still worse, they have been acted upon.

“slain piled up behind the door that it cannot be “opened again.” But I must refrain from these flights of a humane imagination, in deference to those who, whilst hoping and desiring universal and perpetual peace, are yet impatient of any arguments which promise the fulfilment of their aspirations.

Let us then, whilst agreeing upon the possibility of such an occurrence, confine ourselves to a notice of those circumstances in the present condition of France which render a war on her part less likely in 1853 than in 1793. Fortunately she would, in common with every other European state, encounter at the first step all but an insuperable obstacle in the want of money. It is true that, in proportion to her resources, the debt of France is less now than it was in 1793. But, at the latter epoch, she had vast masses of landed property available for the expenses of the war. The church lands, which by some writers were estimated at a fourth of the soil of France; the confiscated estates of the emigrant nobles; the national domains, and the national forests: this immense property, altogether valued by different writers at from five hundred million sterling to double that sum, fell in the course of four years into the hands of the revolutionary Government, and was made by them the basis of a paper money, denominated *assignats*, with which they paid their soldiers, and were enabled to make those gigantic efforts which astonished and terrified the despotic governments of Europe.

There is no doubt that for a time this creation of paper money gave to the French Government all the

power which would have been derived from a foreign loan, or the most productive taxes. It seemed in the eyes of the wild theorists of Paris, who were at that time trampling each other down in quick succession in the death struggle for power, that they possessed an inexhaustible mine of riches, and each one resorted to it more freely than his predecessor. For every new campaign, fresh issues of *assignats* were decreed. When war was declared against England, eight hundred millions of francs were ordered to be created. The result is known to everybody. The more plentiful the *assignats* were, the less became their value, or in other words the dearer grew all commodities; bloody decrees followed, to keep down prices; but markets were not to be permanently regulated, even by the Reign of Terror. Ultimately, when seven hundred millions sterling of *assignats* had been issued, they fell to one and a half per cent. of their nominal value; and a general at the head of an army in 1795, with a pay of four thousand francs a month, was in the actual receipt of eight pounds only in gold or silver. But paper money had, in the mean time, enabled the government to overcome Pitt's coalition.

But, in case of a war, in 1853, the French Government would have none of these temporary resources. The domains of the church, the crown, and the aristocracy, divided and subdivided, have passed into the hands of the people. There remain no great masses of landed property to seize for the benefit of the state. The very name of *assignat* conjures up visions of confiscation. In no country

in the world is there so great a distrust of paper money as in France. To raise the funds necessary for entering upon a war the Government of France must now impose taxes on the eight millions of proprietors amongst whom the land is parcelled, and by whom the great bulk of the revenue is contributed. As a declaration of war would be followed by an immediate falling off in the receipts of indirect taxes from customs and excise, this defalcation, as well as the extra demand for warlike purposes, must fall upon the land. The peasant proprietors of France, ignorant as they are in many respects, know instinctively all this, and they are, therefore, to a man opposed to a war; and, hence it is, that in all Louis Napoleon's addresses to them (and they in the ultimate appeal really govern France), whether as candidate for the Assembly, the Presidency, or the Empire, he has invariably declared himself in favour of peace.

But, I think, I hear it objected that the French often made war pay its own expenses. It is true, and to a great extent, the foregoing statement explains how it was accomplished. Wherever the French armies went, they carried with them the doctrine of liberty and equality, and they were received less as conquerors than deliverers by the mass of the people; for the populations of the invaded countries, like the French themselves previous to the revolution, were oppressed by the privileged classes, and ground down to the earth by inordinate and unjust taxation. Everywhere the invaders found great masses of property belonging to the govern-

ment, the church, and exclusive corporations; and, in some cases, the monastic orders were still revelling in their pristine wealth and luxury. These great accumulations of property were confiscated for the use of the armies of the "Republic." In some cases considerable sums were transmitted to Paris, for the service of the Home Government. Napoleon sent home two millions sterling during his first campaign in Italy; and it is stated that the large amount of specie found by the French in the coffers of the frugal aristocratic government of Berne was of essential service in fitting out the expedition to Egypt.

But how changed is all this at the present time! An invading army instead of finding governments with a stock of bullion to tempt their cupidity, or a good balance at their bankers, would encounter nothing but debt and embarrassment, which the first shock of war would convert into bankruptcy and ruin; they would find church lands, and government domains parcelled among the people; and as any attempt to levy contributions must bring the invaders at once into collision with the mass of the population, it would be found far cheaper and wiser to pay their own expenses, than attempt to raise the money by a process which would convert hostilities between governments into a crusade against individuals, where every house would be the battle ground in defence of the most cherished rights of home, family, and property.

And, to increase the difficulty, war itself, owing to the application of greater science to the process

of human destruction, has become a much more costly pursuit. So great has been the *improvement* in the construction of horizontal shells, and other contrivances in gunnery, that even Sir Howard Douglas, who could recount with the utmost complacency the capabilities of Congreve rockets, Shrapnell shells, grape, and canister, seems struck with compunction at the contemplation of this last triumph of his favourite science. But a still greater discovery has been since announced by Mr. Nasmyth, who offers to construct a monster mortar for marine warfare, which shall lie snugly ensconced in the prow of a bomb-proof floating steam vessel, and on being propelled against a ship of war, the concussion shall cause an explosion with force sufficient to tear a hole in her side "as big as a church-door." Now, I attach little importance to the argument that these murderous contrivances will disincline men to war, from fear of being killed. When cross-bows were first brought into use, the clergy preached against them as murderous. Upon the introduction of the "sight," to assist the eye in taking aim with a cannon, on board ship, the old gunners turned their quids, looked sentimental, and pronounced the thing no better than "murder." But war lost none of its attractions by such discoveries; it is at best but gambling for "glory;" and whatever be the risk, men will always take the long odds against death. But I have great hopes from the expensiveness of war, and the cost of preparation; and should war break out between two great nations, I have no doubt that the immense consumption of

material, and the rapid destruction of property, would have the effect of very soon bringing the combatants to reason, or exhausting their resources. For it is quite certain that the Nasmyths, Fairbairns, and Stephensons, would play quite as great a part as the Nelsons and Collingwoods, in any future wars; and we all know that to give full scope to their engineering powers involves an almost unlimited expenditure of capital.

Besides, war would now be felt as a much greater interruption and outrage to the habits and feelings of the two countries, than sixty years ago, owing to the more frequent intercourse which takes place between them. There is so much cant about the tendency of railways, steam-boats, and electric telegraphs, to unite France and England in bonds of peace, uttered by those who are heard, almost in the same breath, advocating greater preparations against war and invasion, that I feel some hesitation in joining such a discordant chorus. But when we recollect that sixty years ago it took from four to six days to communicate between London and Paris, and that now a message may be sent in as many minutes, and a journey be made in twelve hours;—that at the former time a mail started twice a week only for the French capital, whilst now letters may be dispatched twice a-day; and that the visiting intercourse between the two countries has multiplied more than twenty-fold:—recollecting all this, it cannot be doubted that it would be more difficult now than in 1793 to tear the two countries asunder, and render them inaccessible to each other by war.

But these are moral ties which I will not dwell upon. I come at last to the really solid guarantee which France has given for a desire to preserve peace with England.

If you had the opportunity, as I had, of visiting almost daily the Great Exhibition, you must have observed that, whilst England was unrivalled in those manufactures which owed their merit to great facilities of production, and America excelled in every effort where a daring mechanical genius could be rendered subservient to purposes of general utility, there was one country, which, in articles requiring the most delicate manipulation, the purest taste, and the most skilful application of the laws of chemistry and the rules of art to manufacturing purposes, was by universal consent allowed to hold the first rank; that country was France. And it must not be forgotten that her preparation for this world-wide competition was made at the time when her trade and manufactures were suffering great depression and discouragement, owing to the want of confidence produced by recent revolution. And yet, notwithstanding this disadvantage, she carried away the highest honours for that class of manufactures requiring the greatest combination of intelligence and skill on the part of the capitalist and artizan, and the production of which is possible only in a country which has reached the most advanced stage of civilization. Yet this is the people* who,

* It cannot be too strongly impressed upon the mind of the reader that this cry of '*invasion without notice*' was raised when Louis Philippe was still on the throne,—as the following extract

we are told, will, without previous declaration of war, make a piratical attack upon our shores, with no more regard for the retributive consequences to

from a letter of remonstrance, addressed by Sir William Molesworth, Jan. 17th, 1848, to the Editor of the *Spectator*, London Newspaper, will plainly shew:—

“You say that ‘the next attack on England will probably be without notice’—‘Five thousand (Frenchmen) might inflict disgrace on some defenceless post; 500 might insult British blood at Herne Bay, or even inflict indelible shame on the empire at Osborne House!’ Good God! can it be possible that you, whom I ranked so high among the public instructors of this nation—that you consider the French to be ruffians, Pindarees, freebooters—that you believe it necessary to keep constant watch and ward against them, as our Saxon forefathers did against the Danes and the Nordmen, lest they should burn our towns, plunder our coasts, and put our Queen to ransom? Are you not aware that the French are as civilized as ourselves—in some respects intellectually our superiors? Have you forgotten that they have passed through a great social revolution, which has equalized property, abolished privilege, and converted the mass of the people into thrifty and industrious men, to whom war is hateful, and the conscription detestable? *Are you not aware that, they possess a constitutional government, with the forms and practice of which they are daily becoming more and more conversant; that no measure of importance can be adopted without being first debated and agreed to in the Chambers; and that the love of peace, and the determination to preserve peace, have given to the King of the French a constant majority in those Chambers, and kept him in peaceable possession of his throne? Can you controvert any one of these positions?”*

These writers must be judged, not by what they now say of Louis Napoleon's designs, but what they said of the French nation when Guizot was Prime Minister, under a constitutional king, and *when we were spending two millions more on our armaments than anybody now proposes to spend.*

their own interests, than if they were a tribe of ancient Scandinavians, who, when they made a hostile expedition, carried all their worldly goods to sea in their war boats with them.

Let me repeat it—if for the dozenth time—such an opinion would never be put forth, unless by writers and speakers who presume most insultingly upon the ignorance of the public. It really should be a question with the peace party, whether they could do a better service to their cause than by giving popular lectures upon the actual state of the population of France. And let them not forget, when dealing with this invasion cry, how the people were told, in 1792, that the French were coming to burn the Tower, and put arsenic in the New River, to poison the metropolis, at the very moment when, *as we know now*, the French ambassador was humbly entreating our government not to go to war. May not the historian of sixty years hence have a similar account to give of the stories now put forth respecting the intentions of the French people? But I promised to give credit to those writers for sincerity, and I proceed to answer them in that spirit,—begging pardon of every Frenchman who may read my pages for dealing seriously with such a topic.

France, as a manufacturing country, stands second only to England in the amount of her productions, and the value of her exports; but it is an important fact in its bearings on the question before us, that she is more dependent than England upon the importation of the raw materials of her industry; and it is obvious how much this must place her at

the mercy of a power having the command over her at sea. This dependence upon foreigners extends even to those right arms of peace, as well as war, iron and coal. In 1851, her importation of coal and coke, reached the prodigious quantity of 2,841,900 tons; of course a large portion of it is imported over-land from Belgium; of this, 78,900 tons are specially entered in the official returns as being for *the steam navy*; a frank admission, in reply to our alarmists, that the discovery of steam navigation has given us an advantage over them. The coal imported into France in 1792, the year before the war, amounted to 80,000 tons only. Now in this enormous increase, during the last sixty years, we have a proof of the great development of manufacturing industry; but in consequence of steam power having been applied to manufacturing purposes *since* the latter date, the importation of coal has increased in a far greater ratio than any other raw material. Whilst cotton wool, for instance, has increased seven-fold since 1792, coal has augmented more than thirty-fold. This is a most important fact when comparing the two countries; for whilst the indigenous coal and iron in England have attracted to her shores the raw materials of her industry, and given her almost a European monopoly of the great primary elements of steam power, France on the contrary, relying on her ingenuity only to sustain a competition with England, is compelled to purchase a portion of hers from her great rival.

In the article of iron we have another illustration to the same effect. In 1792 pig iron does not figure

in the French tariff; but the importation of iron and steel of all kinds, wrought and unwrought, amounted in that year to 6,000 tons. In 1851 (which was a very low year compared with the years previous to the revolution of 1848) the importation of pig iron amounted to 33,700 tons. And when it is remembered that very high duties are levied upon this article for the protection of the home producer, it must be apparent that its scarcity and high price impose serious disadvantages upon all descriptions of manufactures in France. But the point to which I wish to draw attention is, that so large a quantity of this prime necessary of life, of every industry, is imported from abroad; and in proportion as the quantity for which she is thus dependent upon foreigners has increased since 1792, in the same ratio has France given a security to keep the peace.

But there is one raw material of manufactures, which, in the magnitude of its consumption, the distant source of its supply, and its indispensable necessity, possesses an importance beyond all others. Upwards of two and a half millions of bales of this material are annually attracted across the Atlantic, from the Indian ocean, or the remotest parts of the Mediterranean, to set in motion the capital and industry of the most extensive manufactures ever known in the world; upon which myriads of people are directly and indirectly employed, who are as dependent for their subsistence upon the punctual arrival in Europe, on an average, of seven thousand bales of this vegetable fibre a day, as they would be if their bread were the produce of countries five

thousand miles distant from their doors. Tainted as this commodity is to a large extent in its origin, it is undoubtedly the great peace-preserver of the age. It has placed distant and politically independent nations in mutual dependence, and interested them in the preservation of peace to a degree unknown and undreamed of in former ages. To those who talk glibly of war, I would recommend a visit not merely to that district of which Manchester is the centre, but to the valley of the Seine from Paris to its embouchure, and having surveyed the teeming hive employed upon the cotton manufacture, let them ask what proportion did the capital and labour of those regions bear in 1793 to their present amount and numbers, and what would now be the effect of an interruption to their prosperity, by putting an end to that peace out of which it has mainly grown? Is there any object that could possibly be gained by either country that would compensate for the loss occasioned by one month's suspension of their cotton trade?

The importation of this raw material into France amounted in 1851 to 130,000,000 lbs. In 1792 it was 19,000,000 lbs.; the increase being nearly seven-fold. The consumption of that country is about one-fifth to one-sixth of our own, and it ranks second amongst the manufacturing states of Europe. But the quantities of cotton wool consumed in the two countries afford but an imperfect comparison of the number of people employed, or the value of the manufactures produced; for it is well known that whilst we spin a great part of our

cotton into yarns for exportation, and our manufacturers are largely employed upon common qualities of cloths, the French convert nearly all their material into manufactures, a considerable portion of which is of the finest quality. It was stated by M. Thiers,* in his celebrated speech upon the protective system, that "the cotton industry, which in 1786 represented about a million per annum, represents now twenty-five millions." (I have converted his figures from francs into pounds sterling). If this be a correct statement, the value of the French production will be one-half of our own, whilst the raw material consumed is less than one-fifth. I confess I think there is some exaggeration or error in the estimate; but no doubt can exist of the vital importance of the cotton industry to the prosperity of France; nor need I repeat that it is wholly dependent upon the supply of a raw material from abroad, the importation of which would be liable to be cut off, if she were at war with a nation stronger than herself at sea.

The woollen and worsted trades of France are of a startling magnitude. I confess I was not aware of their extent; and have had some difficulty in accepting the official report, which makes the importation of sheep's wool to amount, in 1851, to 101,201,000lbs., whilst in 1792, it reached only 7,860,000lbs., being an increase of more than twelve-fold. M. Thiers, in his speech before quoted, estimates the annual value of the woollen cloth made in France at sixteen millions sterling.

* National Assembly, 27 June, 1851.

But if the rivalry between the two countries in worsted and woollen manufactures leaves a doubt on which side the triumph will incline, there is no question as to the superiority of the French in the next manufacture to which I will refer, and which forms the glory of their industrial greatness; I allude, of course, to the silk trade, on which the ingenuity, taste, and invention of the people, are brought to bear with such success, that Lyons and Saint Etienne fairly levy contributions upon the whole civilized world; I say fairly, because when all nations, from Russia, to the United States, bow down to the taste of France, and accept her fashions as the infallible standard in all matters of design and costume, there can be no doubt that it is a homage offered to intrinsic merit. Nothing is more difficult to agree upon than the meaning of the word *civilization*; but, in the general acceptation of the term, that country whose language, fashions, amusements, and dress, have been most widely adopted and imitated, has been held to be the most civilized. There is no instance recorded in history of such a country suddenly casting itself down to a level with Malays, and New Zealanders, by committing an unprovoked act of piracy upon a neighbouring nation. Yet we are told to prepare ourselves for such conduct in the case of France! Judging by the increase in the importation of the raw material, the French have maintained as great a progress in the silk as any other manufacture. The raw silk imported in 1851 amounted to 2,291,500lbs., against 136,800lbs. in 1792, showing an increase of seventeen-fold. In

1792, thrown silk did not figure in the tariff, but it was imported to the amount of 1,336,860lbs. in 1851. These large importations, added to the supply from her own soil, furnish the raw material for, by far, the largest silk manufacture in the world.

Instead of singling out any other articles I will put them in a tabular form, including the foregoing, for convenience of reference, drawing your attention to the enormous increase in the importation of linen thread. I regret that I cannot include dye-woods; for, owing to the account having been kept in *value* in 1792, and *quantity* in 1851, no comparison can be instituted.

*Imports into France in 1792 and 1851.**

	1792.	1851.
Cotton wool .	19,000,000 lbs.	130,000,000 lbs.
Olive oil .	16,000 tons.	31,000 tons.
Sheep's wool .	7,860,000 lbs.	101,201,000 lbs.

* [*Imports into France in 1865.*]

Cotton wool . .	200,578,400 lbs. (1)
Olive oil . .	30,934 tons. (2)
Sheep's wool . .	162,058,600 lbs.
Lead . .	36,232 tons.
Linen thread . .	9,532,600 lbs.
Coal . .	6,265,000 tons.
Ditto for steam navy in 1864	74,497 tons.
Coke . .	715,835 tons.
Pig iron . .	169,535 tons.
Sulphur . .	39,720 tons.
Saltpetre . .	1,011 tons.
Zinc . .	31,868 tons.
Raw silk . .	8,100,400 lbs.
Thrown silk . .	2,131,800 lbs.

(1) The figures have been converted from kilogrammes into lbs.

(2) Ton of 1000 kilogrammes.]

Lead . . .	1,010 tons.	. . .	26,100 tons.
Linen thread . . .	601,500 lbs.	. . .	9,421,000 lbs.
Coal . . .	80,000 tons.	. . .	2,574,000 tons.
Ditto for steam navy	” ” ”	. . .	780,900 ”
Coke . . .	” ” ”	. . .	189,000 ”
Total,			2,841,900 tons.
Pig iron . . .	nil.		33,700 tons.
(wrought iron and steel)			
6,000 tons.			
Sulphur . . .	3,876 ”	. . .	28,315 tons.
Saltpetre . . .	270 ”	. . .	8,673 ”
Zinc . . .	10 ”	. . .	13,480 ”
Raw silk . . .	136,800 lbs.	. . .	2,291,500 lbs.
Thrown silk . . .	nil.	. . .	1,336,860 ”

I have confined myself, in the foregoing accounts, to the imports of those articles which are required for manufacturing purposes, because I wish to point out the extent to which France is an industrial nation, and also the degree of her dependence on foreign trade for the raw material of her manufactures. I have said, elsewhere, that whilst governments are preparing for war, all the tendencies of the age are in the opposite direction; but that which most loudly and constantly thunders in the ears of emperors, kings, and parliaments, the stern command, “you shall not break the peace,” is the multitude which in every country subsists upon the produce of labour *employed on materials brought from abroad*. It is the gigantic growth which this manufacturing system has attained that deprives former times of any analogy with our own; and is fast depriving of all reality those pedantic displays of diplomacy, and those traditional demonstrations

of armed force, upon which peace or war formerly depended.

The tabular statement shows that France has entered upon this industrial career with all the ardour which she displayed in her military enterprises, and with the prospect of gaining more durable and useful triumphs than she won in the battle field. I have given the quantities imported, in preference to the prices, because the mode of valuation frequently makes the price a delusive index to quantity. I may add, however, that the statistical summary of the trade of France for 1851, published by authority, makes the declared value of the imports and exports amount together to 2,614 millions of francs, or £104,560,000; of which the exports are put down at £60,800,000, and the imports £43,760,000. But, that which I would particularly allude to, is the fact, that, of all the countries to which their exports are sent, England stands first. “Pour l’exportation, l’Angleterre se présente en première ligne.” It appears that the exports of all kinds (French and foreign produce) to England amounted to 354 millions of francs, or £14,160,000; whilst the exports of French produce were 278 millions of francs, or £11,120,000, being 20 per cent. increase upon the previous year. I do not know the mode of valuing the French exports; it is evident that their prices do not correspond with the valuation at our Custom House.*† That, however, does not affect the ques-

* *Our official* value of French exports to this country for 1851 is £8,033,112.

† [In 1863 the real value of French exports of all kinds

tion of proportions; and it appears that out of a total of £60,800,000 of exports in 1851, England took £14,160,000, or nearly one-fourth. It might be worth while to ask the honest people who sold us so large an amount of commodities, what they would have to say to the five or ten thousand French marauders, who, we are told, are to precipitate themselves upon our shores some morning, and for the sake of a few hours' plunder, to convert twenty-eight millions of people from their best customers into formidable and avenging enemies?

But I must not omit to notice the part performed by the metropolis of France in the great industrial movement of that country. A most interesting report upon the manufactures of Paris, by my esteemed friend M. Horace Say, has been published, and for which he has received the statistical medal of the Academy of Sciences. It appears that its population has doubled since 1793, and that, including its faubourgs, it contains at present 1,200,000 inhabitants. Few people are aware that Paris contains a greater number of manufacturing operatives, than any other city in the world. It appears that there are employed altogether in the various processes of manufacture in that city 407,344 persons, of whom 64,816 are employers of labour, or persons working on their own account, and 342,530 in the receipt of wages; of the latter, 205,000 are men, and 137,530 are women

amounted to 3,526 millions of francs, of which 834 millions were sent to England. The real value of the exports of French produce amounted to 2,642 millions of francs, of which 620 millions were sent to England.]

and children ; and the annual produce of their labour amounts to £58,000,000 sterling. It is estimated by M. Say that 40,000 of these work-people are employed in producing articles directly for exportation. A war with England would not only interrupt the labour of these last, but, by intercepting the supply of raw materials, such as the wood used in cabinet making, &c., and obstructing the export of their productions, would plunge the whole of that excitable metropolis into confusion and misery. It is fortunate for humanity that the interests of so influential a community are on the side of peace, and we may safely leave the *blouses* of Paris to deal with the 500 French pirates who, in the imagination of the *Spectator*, were to carry off the Queen from Osborne.

Having thus seen that France is, with the sole exception of ourselves, the greatest manufacturing country in the world, and that in some branches she excels us,—having also seen that in so far as she requires a supply from abroad of coal and iron, she is in greater dependence upon foreigners for the raw materials of her industry than even ourselves, I now come to her navigation ; and here in the facts of her mercantile tonnage, we shall find a remarkable contrast to the great development of her manufactures ; a fact which ought to give ample assurance to a maritime state like England or America against a wanton attack at her hands.

I give below an account of the navigation of France to all parts of the world, and to the fisheries, in 1792 and 1851 :—

1792.		
ARRIVALS.		
8,229 Ships	.	799,458 Tons
DEPARTURES.		
7,688 Ships	.	642,671 Tons
		Together
		1,442,129 Tons.

1851.		
ARRIVALS.		
9,175 Ships	.	924,465 Tons
DEPARTURES.		
9,735 Ships	.	1,032,503 Tons
		1,974,968 Tons.
		Increase about 40
		per cent.

Thus, whilst, as we have seen, the importations of raw materials for her manufactures have increased in some cases twenty-fold, her mercantile tonnage has not augmented more than 40 per cent, or less than one-half.* The increased tonnage, required for this large additional supply of commodities, has chiefly gone to swell the mercantile marines of other countries; as the following figures will shew:—

FOREIGN TONNAGE ENGAGED IN THE FRENCH TRADE.

DEPARTURES.	
1787 †	532,687 Tons
1851—12,720 Ships.	1,510,403 Tons
Increase about 180 per cent.	

* [Navigation of the external commerce of France in 1865, fisheries included:—

	Ships. (1)	Tons.
Arrivals . . .	28,718	4,999,000
Departures . . .	22,073	3,589,000
Total . . .	50,791	8,588,000
Share of Foreign Ships:—		
Arrivals . . .	17,486	3,016,000
Departures . . .	12,471	1,943,000
Total . . .	29,957	4,959,000

(1) Vessels with cargoes. Those in ballast, the returns of which are not known for 1865, would if added increase the amount nearly a third, especially that of the departures.]

† This is the only report near this date which I can find.

It will be here seen how much greater the increase of foreign than French tonnage has been in the trade of France; a fact which, I may add, ought to make her statesmen doubt the wisdom of the protective system, by which they have sought to cherish their mercantile navy.

The return of the tonnage of British vessels entering inwards and clearing outwards in 1851, is as follows :*—

INWARDS.	OUTWARDS.
1851—4,388,245 Tons.	4,147,007 Tons.

Our Custom House records for 1792 were destroyed by fire. But it appears that our tonnage has doubled since 1803. It is, however, in our steam vessels that we have made the greatest relative progress as compared with the French. It was stated by Mr. Anderson, in the House of Commons, that for every horse-power possessed by the French, we had twenty; and yet we are told that the discovery of steam navigation has conferred a great advantage upon France.

The strength of a people at sea has invariably been measured by the extent of their mercantile

* [The total tonnage of British vessels entering inwards and clearing outwards in 1864 was 18,201,675 tons. In 1864, there were 26,142 sailing vessels, and 2,490 steamers, registered in the ports of the United Kingdom. The total tonnage was 5,427,500 tons. In 1863 the French mercantile navy comprised 15,092 vessels, including 345 steamers; the total tonnage was 985,235 tons. To arrive at a fair comparison, 300,000 tons should be deducted from the British tonnage, being the increase in 1864.]

marine. Judged by this test, there is not even a doubt as to whether England or France be the first naval power. In fact, the French themselves do not question it. It is frankly acknowledged in our favour by M. Thiers, in his speech to the Assembly from which I have before quoted. Nobody in that country has ever pretended that they can, or ought to, keep more than two-thirds of our force at sea. Their public men never believed in the sincerity of our cry of invasion. One of the most eminent of them wrote to me in 1848, and after a frank confession of the deplorable state of their mercantile tonnage, as compared with ours, complained of the cry as a cruel joke, "*une mauvaise plaisanterie.*" Intelligent men in that country cannot believe that we think them capable of such folly, nay madness, as to rush headlong, without provocation, and without notice, into a war with the most powerful nation in the world, before whose very ports the raw materials of their manufactures pass, the supply of which, and the consequent employment and subsistence of *millions* of their population, would be immediately cut off, to say nothing of the terrible retribution which would be visited upon their shores, whilst all the world would be calling for the extermination of a community which had abdicated its civilized rank, and become a mere band of lawless buccaneers; no, they cannot think so badly of themselves as to believe that others, whose opinion they respect, would ever give them credit for such wickedness or insanity.

But I shall be told that the people of France are entirely at the mercy of one man, and that public opinion is now powerless in that country. There is nothing about which we make such mistakes as in passing judgment upon our next neighbour. *Public opinion is as omnipotent there as in the United States, upon matters with which it interests itself*; but it takes a different direction from our own, and therefore we do not appreciate it. But it is quite necessary that the people, I mean the mass of our people, should be better informed as to the character and circumstances of the population of France. Teach Englishmen to despise another nation, and you have gone far towards making them quarrel; and there is nothing so sure to evoke our contempt as to be told that a people have not spirit to maintain their rights against the arbitrary will of a usurper. Now, no people have ever clung with more tenacity to the essential principles and main objects of a revolution than have the French. The chief aim of the Constituent Assembly of 1789 was to uproot feudalism; to found an equal system of taxation; and to establish religious equality and freedom of worship, by appropriating to the State the lands and tithes of the Church, and making *all religions* a charge upon the public revenues; very many other reforms were effected by that body, but these were its leading principles. The abolition of the monarchy was never contemplated by the Constituent Assembly. The death of Louis (which I attribute to the interference of foreign powers), was decreed by the National Convention three years later.

Now, the principles of 1789 have been maintained, and maintained by public opinion only, with more jealousy than we have shown in guarding our bill of Rights, or Habeas Corpus Act; for the latter has been suspended, whenever it suited the convenience of Tory or even Whig governments. But Napoleon at the head of his victorious legions, the Bourbons with a reactionary priesthood at their back, and the present ruler with all the advantages of a socialist hobgoblin to frighten people into his arms, have been compelled to own allegiance to these principles. Insidious attempts have been made to plant anew the genealogical tree, by the creation of *majorats*, but the schemes were nipt in the bud by public opinion, and *public opinion only*.

When told that the present Emperor possesses absolute and irresponsible power, I answer by citing three things which he could not, if he would, accomplish; he could not endow with lands and tithes one religion as the exclusively paid religion of the State, although he selected for the privilege the Roman Catholic Church, which comprises more than nine-tenths of the French people; he could not create an hereditary peerage, with estates entailed by a law of primogeniture; and he could not impose a tax on successions, which should apply to personal property only, and leave real estate free. Public opinion in France is an insuperable obstacle to any of these measures becoming law; because they outrage that spirit of *equality*, which is the sacred and inviolable principle of 1789. Now, if Louis Napoleon were to declare his determination to carry

these three measures, *which are all in full force in England*, as a part of his imperial regime, his throne would not be worth twenty-four hours' purchase; and nobody knows this better than he and they who surround him. I am penning these pages in a maritime county. Stretching from the sea, right across to the verge of the next county, and embracing great part of the parish in which I sit, are the estates of three proprietors, which extend in almost unbroken masses for upwards of twenty miles. The residence of one of them is surrounded with a walled park ten miles in circumference. Not only could not Louis Napoleon create three such entailed estates in a province of France, but were he to declare himself favourable to such a state of things, it would be fatal to his popularity. Public opinion, by which alone he reigns, would instantly abandon him. Yet this landed system flourishes in all our counties, without opposition or question. And why? The poorest cottager on these estates feels that his personal liberty is sacred, and he cares little for equality: and here I will repeat, that I would rather live in a country where this feeling in favour of individual freedom is jealously cherished, than be, without it, in the enjoyment of all the principles of the French Constituent Assembly.

Let us, however, learn to tolerate the feelings and predilections of other people, even if they are not our own; and recollect, we require the same consideration at their hands, for I can vouch from actual experience that the intelligent natives of France, Italy, and other countries, where the Code Napoleon

is in force, and where, consequently, the land is divided amongst the people, are very much puzzled to understand how the English submit to the feudal customs which still find favour here. But I have never found with them a disposition to dogmatize, or insist upon making their system our model. I must, however, say that we are egregiously mistaken if we fall into the belief, so much inculcated by certain parties, that we are the admiration and envy of surrounding nations. Tell the eight millions of landed proprietors in France that they shall exchange their lot with the English people, where the labourer who cultivates the farm has no more proprietary interest in the soil than the horses he drives, and they will be stricken with horror; and vain will it be to promise them as a compensation, Habeas Corpus Acts, or the right of public meetings—you might as well ask them to exchange their little freeholds for a *bon-mot*, or a song. Let us then spare our pity where people are contented; and withhold our contempt from a nation who hold what *they* prize by the vigilant exercise of public opinion.

But the point to which I wish to bring the foregoing argument is, as you will at once see, that where public opinion is thus able to guard great principles which make war upon privilege of every kind, it is surely not to be despised in such a question as entering upon hostilities with England. Nobody, I believe, denies that Louis Napoleon received the votes of a majority of the French people. In the election which took place for the presidency, when he was supported by three-fourths of the

electors, his opponent General Cavaignac had possession of the ballot boxes, and there could be no fraud to account for the majority. With what view did the French people elect him Emperor? To maintain, in the first place, as he is pledged to do, the principles of 1789; and, in the next, to preserve order, keep the peace, and enable them to prosper. Nobody denies that these are the objects desired by France. Yet we are told that he will, regardless of public opinion, plunge the country into war. The same parties who make this charge accuse him of keeping up $4\frac{1}{2}$ per cents. to 105, by all sorts of nefarious means, in order to maintain an artificial show of prosperity. And this same person, we are told, will make a piratical attack upon England, which would in twenty-four hours bring the $4\frac{1}{2}$ per cents. down to 50, in three months to 30, and in three years to nothing! Last year, we are told, was very inimical to the *mental* health of the country, owing to the want of electricity: are these invasionist writers under the influence of this meteorological phenomenon?

But the army! The army, we are told, will compel the Emperor to make war upon somebody. I should humbly submit if they wish to fight, and are not particular about a quarrel, or a declaration of war, that they had better march upon Holland, Prussia, or Belgium, inasmuch as they *could* march there, and, what is equally important, in the combinations of a good general, they could march *back again*. If our Government had any fear of the kind, it is quite evident that they would bring to our shores that

immense fleet which is amusing itself in the Mediterranean, and which it would take at least a month to recal. There can be no doubt, if an invasion took place, and it could be proved that the Government had expected it, that the Ministers would be impeached. But they keep a fleet, more powerful than the whole American navy, two thousand miles off at Malta, and therefore we may be sure at least that they have no fears.

Now, as I have already said, the army of France, about which we hear so much, is no larger in proportion to her population, than the armies of the other powers of Europe, with which she is surrounded; and, inasmuch as that country was invaded, without provocation, by Prussia and Austria, within the memory of man, it is rather unreasonable to ask her to be the first and only country to disarm. Besides, a large part of her army is in Algiers, surrounded by hostile tribes; and, by the way, when that colony was first seized, we used to console ourselves that owing to that part of the army being liable to be cut off by the sea, and offered as a sacrifice to the neighbouring tribes, we had obtained a great security for peace. But, in a word, every body who is acquainted with France (and they are unhappily in this country but few in number) knows that the army is not, like ours, fished out of the lees of society, but that it fairly represents the people. It is, in fact, 400,000 of the young men taken 80,000 a year from the farms, shops, and manufactories, and to which they return at the end of their service; and, such being their origin and destination, their

feelings and opinions are identical with those of their countrymen.

The French soldier is anxious for the time of his service to expire, that he may return to his little family estate. The discipline and the morale of the army is perfect ; but the conscription is viewed with disfavour, as may be known by the price (from £60 to £80), which is paid for a substitute ; and any thing which tended to prolong the period of service, or increase the demand for men, would be regarded as a calamity by the people. I have never heard but one opinion — that the common soldiers share in the sentiments of the people at large, and do not want a war. But then the officers ! Surely after Louis Napoleon's treatment of the African generals, stealing them out of their warm beds in the night, he will not be any longer supposed to be ruled by the officers. His dependence is mainly upon the peasant proprietors, from whom the mass of the army is drawn.

But I must draw this long letter to a close.— What then is the practical deduction from the facts and arguments which I have presented ? Why, clearly, that conciliation must proceed from ourselves. The people of this country must first be taught to separate themselves in feeling and sympathy from the authors of the late war, which was undertaken to put down principles of freedom. When the public are convinced, the Government will act ; and one of the great ends to be attained, is an amicable understanding, if not a formal convention, between the two Governments, *whatever their form may be*, to

prevent that irrational rivalry of warlike preparations which has been lately and is still carried on. One word of diplomacy exchanged upon this subject between the two countries will change the whole spirit of the respective governments. But this policy, involving a reduction of our warlike expenditure, will never be inaugurated by an aristocratic executive, until impelled to it by public opinion. Nay, as in the case of the repeal of the corn law, — *no minister can do it, except when armed by a pressure from without.*

I look to the agitation of the peace party to accomplish this end. It must work in the manner of the League, and preach common sense, justice, and truth, in the streets and market places. The advocates of peace have found in the *peace congress* movement a common platform, to use an Americanism, on which all men who desire to avert war, and all who wish to abate the evil of our hideous modern armaments, may co-operate without compromising the most practical and “moderate” politician, or wounding the conscience of my friend Mr. Sturge, and his friends of the Peace Society — upon whose undying religious zeal, more than all besides, I rely for the eventual success of the peace agitation. The great advance of this party, within the last few years, as indicated most clearly by the attacks made upon them, which, like the spray dashed from the bows of a vessel, mark their triumphant progress, ought to cheer them to still greater efforts.

But the most consolatory fact of the times is the altered feeling of the great mass of the people since

1793. *There* lies our great advantage. With the exception of a lingering propensity to strike for the freedom of some other people, a sentiment partly traceable to a generous sympathy, and in some small degree, I fear, to insular pride and ignorance, there is little disposition for war in our day. Had the popular tone been as sound in 1792, Fox and his friends would have prevented the last great war. But, for this mistaken tendency to interfere by force in behalf of other nations, there is no cure but by enlightening the mass of the people upon the actual condition of the continental populations. This will put an end to the supererogatory commiseration which is sometimes lavished upon them, and turn their attention to the defects of their own social condition. I have travelled much, and always with an eye to the state of the great majority, who everywhere constitute the toiling base of the social pyramid; and I confess I have arrived at the conclusion that there is no country where so much is required to be done before the mass of the people become what it is pretended they are, what they ought to be, and what I trust they will yet be, as in England. There is too much truth in the picture of our social condition drawn by the Travelling Bachelor* of Cambridge

* Mr. Kay, in his valuable work on the education and social condition of the people of the continent, offers this sad reflection in speaking of the state of things at home:—"Where the aristocracy is richer and more powerful than that of any other country in the world, the poor are more oppressed, more pauperised, more numerous in comparison to the other classes, more irreligious, and very much worse educated than the poor of any other European nation, solely excepting uncivilized Russia, and Turkey, enslaved Italy, misgoverned Portugal, and revolutionized Spain."

University, and lately flung in our faces from beyond the Atlantic, to allow us any longer to delude ourselves with the idea that we have nothing to do at home, and may therefore devote ourselves to the elevation of the nations of the Continent. It is to this spirit of interference with other countries, the wars to which it has led, and the consequent diversion of men's minds (upon the Empress Catherine's principle) from home grievances, that we must attribute the unsatisfactory state of the mass of our people.

But to rouse the conscience of the people in favour of peace, the whole truth must be told them of the part they have played in past wars. In every pursuit in which we embark, our energies carry us generally in advance of all competitors. How few of us care to remember that, during the first half of the last century, we carried on the slave trade more extensively than all the world besides; that we made treaties for the exclusive supply of negroes; that ministers of state, and even royalty were not averse to profit by the traffic. But when Clarkson (to whom fame has not yet done justice) commenced his agitation against this vile commerce, he laid the sin at the door of the nation; he appealed to the conscience of the people, and made the whole community responsible for the crimes which the slave traders were perpetrating with their connivance; and the eternal principles of truth and humanity, which are ever present in the breasts of men, however they may be for a time obscured, were not appealed to in vain. We are now, with our characteristic energy, first and foremost in preventing, *by force*, that traffic

which our statesmen sought to monopolize a century ago.

It must be even so in the agitation of the peace party. They will never rouse the conscience of the people, so long as they allow them to indulge the comforting delusion that they have been a peace-loving nation. We have been the most combative and aggressive community that has existed since the days of the Roman dominion. Since the Revolution of 1688 we have expended more than fifteen hundred millions of money upon wars, not one of which has been upon our own shores, or in defence of our hearths and homes. "For so it is," says a not unfriendly foreign critic,* "other nations fight on or near their own territory; the English everywhere." From the time of old *Froissart*, who, when he found himself on the English coast, exclaimed that he was among a people who "loved war better than peace, and where strangers were well received," down to the day of our amiable and admiring visitor, the author of the *Sketch Book*, who, in his pleasant description of *John Bull*, has portrayed him as always fumbling for his cudgel whenever a quarrel arose among his neighbours, this pugnacious propensity has been invariably recognized by those who have studied our national character. It reveals itself in our historical favourites, in the popularity of the mad-cap Richard, Henry of Agincourt, the belligerent Chatham, and those monarchs and statesmen who have been most famous for their warlike

* A Residence at the Court of London, by Richard Rush, Minister from the United States.

achievements. It is displayed in our fondness for erecting monuments to warriors, even at the doors of our marts of commerce; in the frequent memorials of our battles, in the names of bridges, streets, and omnibuses: but above all in the display which public opinion tolerates in our metropolitan cathedral, whose walls are decorated with bas-reliefs of battle scenes, of storming of towns, and charges of bayonets, where horses and riders, ships, cannon, and musketry, realize by turns, in a Christian temple, the fierce struggle of the siege, and the battle-field.—I have visited, I believe, all the great Christian temples in the capitals of Europe; but my memory fails me, if I saw anything to compare with it. Mr. Layard has brought us some very similar works of art from Nineveh, but he has not informed us that they were found in Christian churches.

Nor must we throw upon the aristocracy the entire blame of our wars. An aristocracy never governs a people by opposing their ruling instincts. In Athens, a lively and elegant fancy was gratified with the beautiful in art; in Genoa and Venice, where the population were at first without territory, and consequently where commerce was the only resource, the path to power was on the deck of their merchantmen, or on 'Change. In England, where a people possessing a powerful physical organization, and an unequalled energy of character, were ready for projects of daring and enterprise, an aristocracy perverted these qualities to a century of constantly recurring wars. The peace party of our day must endeavour to turn this very energy to good account,

in the same spirit in which Clarkson converted a nation of man-stealers into a Society of determined abolitionists. Far from wishing to destroy the energy, or even the combativeness, which has made us such fit instruments for the battle-field, we shall require these qualities for abating the spirit of war, and correcting the numberless moral evils from which society is suffering. Are not our people uneducated? juvenile delinquents uncared for? does not drunkenness still reel through our streets? Have we not to battle with vice, crime, and their parent, ignorance, in every form? And may not even charity display as great energy and courage in saving life, as was ever put forth in its destruction?

A famine fell upon nearly one-half of a great nation. The whole world hastened to contribute money and food. But a few courageous men left their homes in Middlesex and Surrey, and penetrated to the remotest glens and bogs of the west coast of the stricken island, to administer relief with their own hands. To say that they found themselves in the valley of the shadow of death would be but an imperfect image—they were in the charnel-house of a nation. Never since the 11th century, did pestilence, the gaunt handmaid of famine, glean so rich a harvest. In the midst of a scene, which no field of battle ever equalled in danger, in the number of its slain, or the sufferings of the surviving, these brave men moved as calm and undismayed as though they had been in their own homes. The population sunk so fast that the living could not bury the dead; half-interred bodies protruded from the gap-

ing graves; often the wife died in the midst of her starving children, whilst the husband lay a festering corpse by her side. Into the midst of these horrors did our heroes penetrate, dragging the dead from the living with their own hands, raising the head of famishing infancy, and pouring nourishment into parched lips from which shot fever-flames more deadly than a volley of musketry. Here was courage! No music strung the nerves; no smoke obscured the imminent danger; no thunder of artillery deadened the senses. It was cool self-possession and resolute will; calculated risk and heroic resignation. And who were these brave men? To what "gallant" *corps* did they belong? Were they of the horse, foot, or artillery force? They were Quakers, from Clapham, and Kingston! If you would know what heroic actions they performed, you must inquire from those who witnessed them. You will not find them recorded in the volume of reports published by themselves:—for Quakers write no bulletins of their victories.

Will you pardon me if, before I lay down my pen, I so far presume upon your forbearance as to express a doubt whether the eagerness with which the topic of the Duke of Wellington's career was so generally selected for pulpit manifestations was calculated to enhance the influence of ministers of the Gospel, or promote the interests of Christianity itself. Your case and that of public men are very dissimilar. The mere politician may plead the excuse, if he yields to the excitement of the day, that he lives and moves, and has his being in the popular temper

of the times. Flung as he is in the mid-current of passing events, he must swim with the stream, or be left upon its banks; for few have the strength or courage to breast the rising wave of public feeling or passion. How different is your case! Set apart for the contemplation and promotion of eternal and unchanging principles of benevolence, peace, and charity, public opinion would not only tolerate but applaud your abstinence from all displays where martial enthusiasm, and hostile passions are called into activity. But a far higher sanction than public opinion is to be found for such a course. When the Master whom you especially serve, and whose example and precepts are the sole credentials of your faith, mingled in the affairs of this life, it was not to join in the exaltation of military genius, or share in the warlike triumphs of nation over nation, but to preach "Peace on EARTH and good will toward MEN." Can the humblest layman err, if, in addressing the loftiest dignitary of the Christian Church, he says, "GO THOU, AND DO LIKEWISE?"

I remain, yours,

R. COBDEN.
